

# Feature Blueprint — Final

---

A single self-contained design document. Every system, formula, default value, and rule is specified here. No outside references required. This edition incorporates all finalized design changes: the parliamentary election system, the level-based work skill, the Pulse social network, real-money Gold sales, the real-time chat system, the battle replay system, the rebalanced taxation model, the expanded anti-cheat system, the four-tier staff hierarchy, the rankings system, and the marketplace context-separation and presidential delegation models. Premium accounts and Shouts have been removed; their replacements are documented in full. This edition further adds explicit click-by-click interaction flows to every feature — written to the depth of the §22 Elections walkthrough (which page, which button, what shows before and after, what updates inline versus navigates, eligibility checks and failure states, confirmation popups, and where you land) — appended additively so that every existing rule, formula, default, and table is preserved unchanged.

# 1. Game Overview

---

A persistent, browser-based geopolitical simulation set on a real-world map. Each player is a citizen of a country. Citizens train to grow stronger, work for companies (extracting raw materials or manufacturing finished goods), fight in battles, vote in elections, run for office, write for newspapers, post on a social network, chat with allies, and trade on a global marketplace.

## 1.1 Core principles

- **One real-world day = one game day.** The world reset happens at 00:00 GMT every day. All daily counters, HP refills, and time-based ticks align to this clock.
- **Every meaningful action is performed by a real player.** The only exception is admin-created NPC accounts (described in §49.7), which exist solely to seed empty newly-unlocked countries.
- **There is no end state.** Players progress along multiple ladders (strength, work skill level, military rank, wealth, political office, login streak, social following) that grow indefinitely.
- **The only formal, named positions** in the game are: Citizen, Congress Member, President, Party President (Party Leader), Military Unit Commander. Everything else (owning a company, owning a newspaper, fighting in battles, trading on markets, posting on Pulse) is an activity a citizen does, not an identity they hold.
- **The game runs on a single server.** Multi-server support is not in scope for v1.
- **Gold is sold for real money.** Gold is the monetization currency; players buy it with real currency. This is documented fully in §42.

## 1.2 Formal vocabulary

| Term                         | Meaning                                                                                                                     |
|------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| Citizen                      | A player. The default and permanent identity.                                                                               |
| Country                      | A real-world country with 7 regions and its own currency.                                                                   |
| Region                       | A subdivision of a country with an optional resource assignment and a name. Exactly 7 per country, fixed at world creation. |
| Raw Material Company         | A company that extracts one of the three raw materials: Iron, Grain, or Oil.                                                |
| Manufacturing Company        | A company that consumes raw materials to produce finished goods: Weapons, Food, or Tickets.                                 |
| MU (Military Unit)           | A player-organized combat club.                                                                                             |
| Party                        | A player-organized political organization within a country.                                                                 |
| Battle                       | A 15-round combat encounter, decided when one side wins 8 rounds.                                                           |
| MPP (Mutual Protection Pact) | A bilateral defense agreement between two countries.                                                                        |
| Coalition                    | A multilateral alliance between up to 12 countries.                                                                         |
| Natural Enemy                | A specific country designated as your country's primary rival.                                                              |
| HP                           | Health. The single action-cost stat. Starts at 100 per day.                                                                 |
| Gold                         | The universal scarce currency, purchasable with real money.                                                                 |
| Local currency               | Per-country currency (INR, USD, EUR, etc.).                                                                                 |
| Pulse                        | The in-game social network (post, follow, repost, trending), replacing Shouts.                                              |
| Work skill level             | A citizen's economy skill, expressed as a level (1, 2, 3 ...) earned by working days.                                       |

## 2. The Map & Geography

---

### 2.1 World map

The map is a real-world geographic map showing all real-world countries. Continents and country borders match real-world geography.

**Special note on India:** The map displays Jammu & Kashmir, Aksai Chin, and Arunachal Pradesh fully as part of India, using boundaries from the Survey of India's official data. A disclaimer is shown on the map page noting that the map is based on Survey of India data and the game world is fictional.

### 2.2 Countries

Every real-world country exists on the map. Each country has:

- A fixed, distinct color that fills all of its regions. The color is a property of the country, not the regions.
- Exactly **7 regions per country**, fixed at world creation. The region count is permanent — admins and congress can rename regions but cannot add, remove, merge, or split them. The 7-region structure is uniform across all countries to support consistent map design.
- A unique local currency (e.g., India → INR, USA → USD).
- A capital region, set by admin at world creation (defaulting to the real-world capital location). Congress can pass a "Move Capital" law to change it later.

### 2.3 Regions

Each region within a country has:

- A name (editable — see below).
- An optional resource assignment: Iron, Grain, Oil, or None.
- Map overlay icons for active battles and a capital marker.

#### Region renaming:

- *In-game:* Congress passes a "Rename Region" law. Any congress member can propose. 24-hour voting window, simple majority required, no Gold cost. The new name must pass validation (1–40 characters, profanity filter applies). On the law passing, the name updates immediately on the map and in all references.
- *Admin override:* Super Admins can set or override any region's name at any time from the admin panel.

### 2.4 Resources — fixed binary system

There are exactly 3 resources in the game: **Iron, Grain, Oil**. Each region either has one of these three resources, or none. There are no high/medium/low tiers — a region either matches a resource type or doesn't. Binary.

**Resource bonus mechanic (applies to Raw Material Companies ONLY):**

| Region resource                        | Raw Company type | Effect on production                 |
|----------------------------------------|------------------|--------------------------------------|
| Iron                                   | Iron Mine        | +50% production                      |
| Grain                                  | Grain Farm       | +50% production                      |
| Oil                                    | Oil Well         | +50% production                      |
| None                                   | Any              | 1× production (no bonus, no penalty) |
| Mismatch (e.g., Oil region, Iron Mine) | —                | 1× production (no bonus, no penalty) |

Manufacturing companies do **NOT** receive any region bonus. A weapons factory produces the same amount whether located in an iron-rich region or anywhere else. Region resource matters only for raw extraction.

**Resource assignment to regions:** At world creation, the admin assigns one resource (Iron / Grain / Oil) or None to each of the 7 regions per country. The system can auto-suggest assignments based on real-world geography (e.g., Saudi Arabia → Oil, Punjab → Grain), but the admin makes the final assignment. Super Admins can override any region's resource assignment at any time. The +50% bonus value is admin-editable per server.

## 2.5 Click flows — viewing the map; renaming a region

**Viewing the map and a region.** Open **Country menu** → **Map** for the world map (7 regions per country, fixed country colors, capital markers, active-battle overlays, conquered-region labels on hover, a per-region resource icon, locked countries greyed out); zoom and pan, then click any region to open its **Region page** (§45.7–§45.8). The India boundary note/disclaimer is shown on the map page itself (§2.1).

**Renaming a region (congress).** Region names change only through the '**Rename Region**' law. A congress member opens **Country page** → **Congress & Legislation** → **Propose Law** → '**Rename Region**', picks the region from a dropdown, types the new name (validated live: 1–40 characters, profanity filter), and clicks **Propose** → a **24-hour** congress vote opens (simple majority, no Gold cost). On passage the name updates **immediately** on the map and in every reference to the region (§2.3). A Super Admin can also set or override any region name from the Admin Panel at any time (§49.2).

---

## 3. Country States & Activation

---

### 3.1 Locked vs. unlocked countries

All real-world countries are drawn on the map. However, countries do not start playable. They begin in a **locked** state.

A locked country:

- Is visible on the map (drawn with country shape and borders) but rendered with a distinct visual treatment (greyed out / "Locked" overlay).
- Cannot be selected during registration as a country of citizenship.
- Cannot be traveled to.
- Has no government, no congress, no president, no political parties, no companies, no Military Units.
- Cannot be attacked, signed into MPPs, joined into coalitions, or interacted with in any economic way.

An unlocked country has all of these capabilities enabled and is fully playable.

### 3.2 Admin unlocking

Super Admins unlock countries one at a time from the admin panel. There is no fixed schedule — the admin decides when to unlock each country.

### 3.3 Adjacency with locked countries

The system computes country neighbor relationships dynamically. Locked countries are skipped in adjacency calculations.

*Example:* If Pakistan is locked, India and Iran are treated as direct neighbors. India can declare war on Iran, travel to Iran is direct, and MPPs between India and Iran are valid. When Pakistan is later unlocked, adjacency recomputes: Pakistan becomes a wedge between India and Iran, and they are no longer direct neighbors unless they share another active border.

### 3.4 Unlocking a country — bootstrap and grace period

When an admin unlocks a country, the country starts completely empty: no government, no congress, no president, no parties, no companies, no MUs.

**30-day grace period.** For the first 30 days after unlock:

- The country cannot be attacked. No war declarations can be made against it.
- The country cannot declare war on other countries either.
- The country cannot be set as a Natural Enemy by other countries.
- The country can receive citizenship applications, host companies, allow MUs and parties to form, and participate in market trade normally.

### 3.5 Before the first election

For the period within the grace window before the next monthly election:

- The country has no president and no congress until the first election concludes.
- Laws cannot be proposed — no government exists to legislate.
- The country uses default values for all settings:

| Setting         | Default |
|-----------------|---------|
| VAT             | 5%      |
| Import Tax      | 10%     |
| Export Tax      | 5%      |
| Work Tax        | 10%     |
| Citizenship Fee | 5 Gold  |

All defaults are admin-editable.

### 3.6 First election

The first elections happen on the regular monthly calendar (see §22) once enough citizens exist. After the first election cycle concludes, the country has a functioning government and laws can be proposed.

### 3.7 Grace period ends

30 days after unlock, the grace period expires. The country becomes fully open to attack, MPP, coalition, Natural Enemy, and all other interactions.

### 3.8 Auto-locking on depopulation

Auto-locking is determined **solely by citizenship count, not by physical presence**. If a country's count of citizens (people whose citizenship is that country) drops to 0 — all citizens migrated away or accounts deleted — the country **auto-locks**. It becomes inaccessible until a Super Admin manually unlocks it again. Empty regions remain on the map.

A foreigner who is merely *physically located* in a country does **not** keep it unlocked. If a country auto-locks while foreign visitors are standing in it, those foreigners are immediately relocated to their own home country's capital region.

### 3.9 Click flows — country activation (admin & automatic)

Country activation is driven by admins and by population, not by an ordinary player click-path:

- **Unlocking** is a **Super Admin** action in the Admin Panel (full click-path in §49.2). To players, a newly unlocked country simply becomes **selectable at registration, travelable, and open for citizenship**,

**companies, parties, MUs, and trade**, and it visibly carries the **30-day grace period** (no war declarations, MPPs, or Natural-Enemy designations against it — §3.4) until the grace ends.

- **Auto-locking** is fully automatic and has no button: when a country's **citizenship count reaches 0** (everyone migrated away or accounts were deleted) it locks instantly, any foreigners merely standing in it are relocated to their own home capital (§3.8), and only a Super Admin can unlock it again (§49.2).
-

## 4. The Citizen — Identity, Stats & Profile

Every player is a citizen. This is the player's permanent identity. There are no soldier classes, shopkeeper classes, politician classes, or other identity tags. Citizens may do many things (own a company, sit in congress, write for a newspaper, command a Military Unit, fight in battles, build a following on Pulse) but they remain citizens.

### 4.1 Citizen stats

| Stat                  | Range                              | Grows by                                                                                          |
|-----------------------|------------------------------------|---------------------------------------------------------------------------------------------------|
| Strength              | 0 → unlimited                      | Training (§8). Raw number. Independent stat.                                                      |
| Work skill level      | 1 → unlimited                      | Working (§9). A <b>level</b> , not a raw number. Earned by working days. Independent of strength. |
| HP                    | 0 to 100 baseline; food can exceed | Daily reset + eating food                                                                         |
| XP                    | 0 → unlimited                      | Many actions (§38)                                                                                |
| Level                 | 1 → unlimited                      | XP thresholds (§38)                                                                               |
| BP (Battle Points)    | 0 → unlimited                      | Cumulative damage dealt in battles                                                                |
| Military Rank         | 1 (Recruit) → 20 (Generalissimus)  | BP thresholds (§19)                                                                               |
| Citizenship           | One country at a time              | Set at registration; changeable later (§25)                                                       |
| Current location      | One region                         | Set at registration; changes via travel (§14)                                                     |
| Login streak          | 0 → unlimited consecutive days     | Daily action (§39)                                                                                |
| Medal counts          | Per medal type                     | Earning medals (§40)                                                                              |
| Followers / Following | 0 → unlimited                      | Pulse social graph (§30)                                                                          |

**Strength and work skill are separate stats with different models.** Strength is a raw number that grows on a phased schedule (Day 1–5: +100 per train, Day 6–15: +50, Day 16–25: +30, Day 26+: +10) and is used directly in combat. Work skill is a **level** earned by accumulating working days, with a controlled output curve (see §9). Training never increases work skill; working never increases strength. The asymmetry is intentional: combat power scales (competitive), production is capped (economy stability).

### 4.2 Profile fields — the profile is also the social profile (Pulse)

The citizen profile is merged with the Pulse social profile (§30). A profile page displays:

**Header section:**

- Username (unique, set at registration, changeable via Name Change — §4.5)
- Avatar (uploadable; default if not set; §4.4)
- **Role badges:** Country President, Congress Member, Party President, MU Commander, military rank, staff role (Moderator/Server Admin/Super Admin), Newspaper owner — shown where applicable
- Citizenship (country flag + name)
- Current location (region name + country)
- **"Joined on Game Day 207 (12 May 2026)"** — game day first, real-world date in parentheses
- "Last seen" timestamp
- **Follow button + follower / following counts** (Pulse)

**Bio:** Optional, 500 characters maximum, plain text, with a few key inline stats (strength, BP, medal count).

**Profile tabs:**

- **Posts** — the citizen's Pulse posts
- **Reposts** — what they've reshared
- **Media** — posts with shared battle-replay or newspaper-article link cards
- **Stats** — full detailed stats: level + XP bar, military rank, strength, work skill level, login streak, BP, battles fought, Battle Hero / Resistance Hero counts, recent battles (last 10), key leaderboard ranks (e.g., "#12 strongest in India", "#340 globally")
- **Activity** — recent donations (sent/received, last 30 days), recent articles (last 10), recent medal awards
- **Photos** — personal photo album (real-life images), see §4.6

**Medals section:** Each of the 8 medal types with award count (e.g., "Battle Hero × 47", "Bodybuilder × 12").

**Affiliations:** Political party (if any), Military Unit (if any), companies owned (list with links), newspaper owned (if any).

**Action buttons (for visitors viewing the profile):** Follow, Donate Money, Donate Items, Add to Friends, Send Message, Block, Report Player.

**Note on profile customization:** Custom profile background color, accent color, and theme styling are available to **all** citizens free (these were formerly Premium-only; Premium has been removed — see §42).

## 4.3 What a citizen can do

Subject to level, citizenship, and resource constraints documented elsewhere, a citizen can: train (once per day); work (once per day, if employed); eat food (up to 20 times per day); fight in battles; travel; buy and sell on the Product Market; trade on the Monetary Market; buy and sell companies; accept job offers; create raw and manufacturing companies; create or join a party (level-gated); create or join an MU (level-gated); create a newspaper (level-gated); post on Pulse; participate in chat; comment on newspaper articles; send private messages; make friends; block citizens; donate currency or items to citizens, country treasury, or MU; vote in elections; run for congress, party leader, or president (membership-gated); propose and vote on laws (if a congress member); apply for citizenship in another country; report players or content; buy Gold with real money; and voluntarily delete their account.

## 4.4 Avatar

- Supported formats: PNG, JPG, JPEG. Maximum file size: 2 MB.
- Recommended dimensions: 200×200 pixels (square). Non-square images auto-cropped to square. Larger uploads auto-compressed.
- All uploaded avatars pass automated content moderation. Inappropriate images are rejected. Citizens with inappropriate avatars can be reported (§36).
- Default avatar: a generic silhouette if none set.
- Avatar can be changed at any time, free, no cooldown.
- First avatar upload gives +5 XP (one-time bonus, ever).

## 4.5 Name Change

- A citizen can change their username by paying **40 Gold** (admin-editable).
- The new username must pass validation (3–20 characters, alphanumeric + underscores, no slurs, unique server-wide).
- No cooldown between name changes (each costs 40 Gold).
- Previous usernames remain searchable for 30 days so others can still find the citizen after a rename.
- All historical references (articles, posts, battles) update to display the current username.

## 4.6 Personal photo album

Citizens can maintain a personal photo album of real-life images on their profile.

- **Album only** — photos are not attachable to Pulse posts.
- Maximum **50 photos** per citizen, **2 MB** each. Larger uploads are auto-compressed before storage.
- All photos pass automated content moderation and are reportable; staff can remove them.
- The owner chooses album **visibility: public or private** (their choice).

## 4.7 Click flows — editing your profile, avatar, name, photos

All self-editing lives under **My Places** → **My Profile** (your own profile shows an **Edit Profile** affordance) and the top-bar **Settings cog** → **Profile** tab. Actions other citizens take *on* you are buttons on your public profile.

**Editing bio & customization (inline).** Open **My Places** → **My Profile** → **Edit Profile** (or Settings → Profile). Edit the **bio** (500-character counter), and pick a **background color, accent color, and theme** (free for everyone — §4.2). Click **Save** → the profile re-renders **inline, with no reload**; changes are live immediately. No cooldown.

**Uploading or changing your avatar.** On **Edit Profile**, click **Change Avatar** → **Upload**, choose a PNG/JPG/JPEG ≤ 2 MB. A square crop tool appears (non-square images default to a centered square crop; oversized images auto-compress). Click **Confirm** → the image passes automated content moderation; on pass it replaces your avatar **inline** everywhere; on the **first-ever** avatar upload you also receive **+5 XP** (one-time) with a popup. If moderation rejects it, an inline error shows and the previous avatar stays. Free, no cooldown.

**Name Change (40 Gold).** On **Edit Profile**, click **Change Username** → a field validates live (3–20 characters, alphanumeric + underscores, no slurs, unique server-wide; a red/green indicator updates as you type). Click **Change Name** → a confirmation popup states the **40 Gold** cost and that the previous username stays searchable

for 30 days. **Confirm** → if you hold 40 Gold it is deducted (top-bar Gold updates inline), the username changes everywhere instantly, and all historical references (articles, posts, battles) re-render under the new name. If you lack 40 Gold the Confirm button is disabled with a 'Buy Gold' hint. No cooldown (each change costs 40 Gold again).

**Personal photo album.** Open **My Profile** → **Photos** tab → **Add Photos** → select images ( $\leq 2$  MB each, **max 50**; larger ones auto-compress). Each passes content moderation before it appears. A **visibility toggle (Public / Private)** sits at the top of the album and saves inline when flipped. Hover a photo → **Delete** removes it. Photos are album-only — there is no control to attach a photo to a Pulse post (§4.6, §30.2).

**What a visitor does on your profile.** A citizen viewing your public profile sees the action row: **Follow** (one click; your follower count updates inline — §30.6), **Donate Money / Donate Items** (open the donation dialog — §34.1), **Add to Friends** (sends a request — §32.2), **Send Message** (opens a PM composer — §31), **Block** (confirmation popup, then silent block — §32.5), and **Report Player** (opens the report dialog — §36.3). Each is detailed click-by-click in its own section.

---

## 5. Registration & Onboarding

---

### 5.1 Registration flow

1. Player visits the registration page.
2. Player enters: username, email, password.
3. Player selects a country of citizenship from the list of currently-unlocked countries (locked countries are not selectable).
4. Player selects a starting region within that country (any of the 7 regions).
5. Player completes email verification via a link sent to their email address.
6. Account is created. Player is logged in.

### 5.2 Starter kit

Every new citizen receives at registration:

| Item                                      | Quantity |
|-------------------------------------------|----------|
| Local currency (their country's currency) | 50       |
| Gold                                      | 5        |
| Q1 Food                                   | 10       |
| Q1 Weapons (Pistols)                      | 5        |
| Q1 Tickets                                | 2        |

All quantities are admin-editable per server. **Anti-cheat note:** the starter kit is **non-transferable for the first 7 days** — none of it can be donated, traded, or market-sold during that window (see §43, AC-1).

### 5.3 Initial state

A new citizen starts with: Strength 0; Work skill level 1; HP 100; XP 0; Level 1; BP 0; Military Rank 1 (Recruit); Login streak 1 (registration day counts as day 1); no party, no MU, no companies, no newspaper, no friends, 0 followers.

### 5.4 Onboarding tutorial

The new citizen is immediately presented with Mission 1 (§37 lists all 20 missions). Missions teach the core features one at a time. After Mission 20 completes, the tutorial is over — gameplay continues as the daily loop (§6).

---

## 6. The Daily Loop

---

A typical active citizen's day:

1. Login at any time after 00:00 GMT (the daily reset).
2. **Train** (once, free of HP cost) → strength gain + XP. Done on the Training page (§8).
3. **Work** (once, free of HP cost, only if employed) → work skill progress + salary + XP + company production. Done on the Work page (§9).
4. **Eat food** as needed throughout the day to restore HP.
5. **Fight** in battles (uses HP — 10 HP per attack, 50 HP per Berserk).
6. Optional: vote, post on Pulse, chat with allies, write articles, trade, manage companies, donate, watch battle replays, etc.

The daily reset (00:00 GMT) performs all the actions listed in §48.

---

## 7. Health (HP) System

HP is the single, unified resource used for all player actions that consume effort. There is no separate "energy" stat.

### 7.1 HP rules

- **Baseline HP cap: 100.** At daily reset (00:00 GMT), every citizen's HP is set to exactly 100, regardless of what it was before.
- HP can exceed 100 during the day by eating food. Any HP above 100 at the moment of daily reset is wiped — HP cannot be banked across days.
- HP cannot go below 0. Actions that would cost more HP than the citizen has are blocked with an error message.
- There is no passive HP regeneration. Only the daily reset and eating food restore HP.

### 7.2 HP costs and gains

| Action                                | HP change                             |
|---------------------------------------|---------------------------------------|
| Train                                 | 0                                     |
| Work                                  | 0                                     |
| Fight (one hit)                       | −10                                   |
| Berserk (one click = 5 hits combined) | −50                                   |
| Travel with Q1 ticket                 | −50                                   |
| Travel with Q2 ticket                 | −40                                   |
| Travel with Q3 ticket                 | −30                                   |
| Travel with Q4 ticket                 | −20                                   |
| Travel with Q5 ticket                 | 0                                     |
| Eat Q1 food                           | +10                                   |
| Eat Q2 food                           | +20                                   |
| Eat Q3 food                           | +30                                   |
| Eat Q4 food                           | +40                                   |
| Eat Q5 food                           | +50                                   |
| Daily reset (00:00 GMT)               | Resets to exactly 100; overflow wiped |

All values are admin-editable per server.

### 7.3 Eating food (inline on the dashboard)

The **Eat** control lives on the dashboard inside the Health card. The citizen selects a food quality from a dropdown populated from inventory, clicks **EAT**, and HP increases by that food's value — the bar animates up **inline, with no page reload**; the food count decrements. Eating is also available from the Inventory page.

### 7.4 Food daily limit

A citizen can eat food a limited number of times per day, regardless of how much food they own:

- **Base limit: 20 eats per day.** (There is no Premium tier; this limit is universal.)
  - The counter resets at 00:00 GMT.
-

## 8. Training & Strength

### 8.1 The Training page

The dashboard **Train** button is always visible and routes to the **Training page** (also reachable via My Places → Train). The page shows:

- Current strength (large number) with a growth chart: total strength line over the last 30 days, plus a "today's gain" highlight.
- The **Train** button (one click). The action is free (costs 0 HP).
- After training: the gain is shown (e.g., "Strength: 1,240 → 1,250 (+10)"), then the button switches to a "**Training complete — come back tomorrow**" state with a countdown to the next reset.
- Training streak (consecutive days trained).
- Bodybuilder medal progress (e.g., "23 / 30 trainings until your next Bodybuilder medal").
- Today's XP gained from training (+4).

**XP from training:** +4 XP (once per day; subsequent train attempts blocked).

### 8.2 Strength gain formula

Strength gain per training session follows a phased schedule based on the citizen's tenure (days since registration), modified by a server catch-up multiplier.

**Phased baseline:**

| Days since registration   | Strength per train |
|---------------------------|--------------------|
| Day 1 to Day 5            | +100               |
| Day 6 to Day 15           | +50                |
| Day 16 to Day 25          | +30                |
| Day 26 onward (permanent) | +10                |

**Server catch-up multiplier.** When a new player registers on a server that already has older players, the system silently boosts their strength gain so they reach the current veteran median in a catch-up window equal to **half the server's age**:

| Server age | New player catches up in |
|------------|--------------------------|
| 2 months   | 1 month                  |
| 6 months   | 3 months                 |
| 1 year     | 6 months                 |
| 2 years    | 1 year                   |

The boost accounts for veterans continuing to train (+10/day) during the catch-up window — so the new player is chasing a moving target. By the end of the catch-up window, the new player's per-train gain has tapered smoothly to +10/day, with no overshoot.

**Post-catch-up:** Every active player gains exactly +10 strength per train, forever. No multipliers, no boosters.

**Hidden math:** The catch-up multiplier and phased schedule are invisible to players. They only see "Strength: X → Y" after each train. No formula, percentile, or boost indicator is shown.

### 8.3 No training tiers or boosters

There are no training facility tiers and no training boosters. Training is one flat action. (There is no Premium account, so no Premium training bonus exists.)

### 8.4 Bodybuilder medal

Every 30 trainings, the citizen receives a **Bodybuilder** medal (+5 Gold reward — see §40). Counter resets after each award.

---

## 9. Work, Work Skill & Jobs

---

### 9.1 Work skill is a LEVEL (not a raw number)

Every citizen has a **work skill level** (1, 2, 3 ...), independent of strength. It grows only by working — never by training. A citizen who never works stays at level 1 regardless of how much they train. Work skill level directly affects how much a company produces when this citizen clicks Work.

### 9.2 The Work page and the Work action

The dashboard **Work** button is **always visible**, regardless of employment, and routes to the **Work page** (also reachable via My Places → Work). The Work page always opens, even when the citizen has no job:

- **If employed:** the page shows the job — employer's company (name, type, quality, region), the salary, the citizen's work skill level + progress chart, and the **Work** button (one click, free / 0 HP). After working it shows the salary earned (net of work tax), the working-day credited toward the next level, the XP gained (+5), and a "**Work complete — come back tomorrow**" state with a countdown.
- **If unemployed:** the page still opens and displays the citizen's current **work skill level and progress**, plus a "You don't have a job yet" notice and a button to the **Job Market** (pre-filtered to jobs the citizen qualifies for, with a "show all jobs" toggle).
- **If the employer (manufacturing) has no raw materials:** a message — "Your employer has no raw materials today; you couldn't work" — plus a button to the Job Market.
- **Hard Worker medal progress** (e.g., "17 / 30 works until your next Hard Worker medal") is shown.

Working: pays the salary in the company's local currency (after work tax — §13); credits a working day toward the next work skill level; produces goods/raw materials for the company (to the owner's inventory by default — §10); awards +5 XP (once per day; subsequent work attempts blocked).

### 9.3 Work skill level thresholds

Levels are earned by accumulating **total working days**. Each early level doubles the requirement; from level 8 onward it is a flat 64 days per level.

| Work skill level | Working days for this level | Cumulative total days |
|------------------|-----------------------------|-----------------------|
| 1                | 0 (start)                   | 0                     |
| 2                | 1                           | 1                     |
| 3                | 2                           | 3                     |
| 4                | 4                           | 7                     |
| 5                | 8                           | 15                    |
| 6                | 16                          | 31                    |
| 7                | 32                          | 63                    |
| 8                | 64                          | 127                   |
| 9                | 64                          | 191                   |
| 10               | 64                          | 255                   |
| 11+              | 64 each                     | +64 per level         |

No level cap. All thresholds admin-editable.

## 9.4 Server catch-up (level-based)

New players on older servers receive **bonus working-day credit** so they reach mid-levels faster and can catch up to veterans — mirroring the strength catch-up philosophy. Early works count for extra level-progress (scaled to half the server's age), tapering to normal (1 day = 1 credit) once caught up. The math is hidden; the player simply sees their level rising faster early on. Admin-tunable.

## 9.5 Production formula — Raw Material Companies

When a citizen clicks Work at a Raw Material Company:

```
raw_materials_produced = (base + work_skill_level) × company_quality_multiplier
× region_resource_bonus × employee_count_multiplier
```

Where:

- **base** = an admin-configured constant (default 4, per-server tunable).
- **work\_skill\_level** = the working citizen's current work skill level.
- **company\_quality\_multiplier** = 1.0 / 1.5 / 2.5 / 3.5 / 5.0 for Q1–Q5.
- **region\_resource\_bonus** = 1.5 if the region's resource matches the raw material type, else 1.0.
- **employee\_count\_multiplier** = the diminishing-returns multiplier (§9.8).

## 9.6 Production formula — Manufacturing Companies

When a citizen clicks Work at a Manufacturing Company:

```
goods_produced = (base + work_skill_level) × company_quality_multiplier ×
employee_count_multiplier
raw_materials_consumed = goods_produced × company_quality_tier
```

- `base`, `work_skill_level`, `company_quality_multiplier`, `employee_count_multiplier` — same as raw companies above.
- **No region bonus for manufacturing companies.**
- `company_quality_tier` = 1 for Q1, 2 for Q2, 3 for Q3, 4 for Q4, 5 for Q5 (linear consumption scaling). Example: producing 100 Q3 weapons consumes 300 iron; producing 50 Q5 food consumes 250 grain.

## 9.7 Output curve by work skill level

With `base` = 4, the per-worker output factor is `(4 + level)`:

| Work skill level | (base + level) | Output vs level 1 |
|------------------|----------------|-------------------|
| 1                | 5              | 100%              |
| 2                | 6              | 120%              |
| 3                | 7              | 140%              |
| 5                | 9              | 180%              |
| 7                | 11             | 220%              |
| 10               | 14             | 280%              |
| 15               | 19             | 380%              |

Even a level-1 worker produces meaningfully; a veteran produces roughly 3–4× a beginner — controlled, never explosive. This is why production cannot flood the economy the way an uncapped raw multiplier would.

## 9.8 Employee diminishing returns (raw and manufacturing)

To prevent unlimited scaling by hiring large workforces, each successive worker who clicks Work at the same company on the same day produces less than the previous one:

| Workers who already worked today | Next worker's productivity multiplier |
|----------------------------------|---------------------------------------|
| 0 (first worker of the day)      | 100%                                  |
| 1                                | 96.55%                                |
| 2                                | 93.10%                                |
| 5                                | 82.76%                                |
| 10                               | 66.90%                                |
| 15                               | 58.62%                                |
| 20                               | 48.28%                                |
| 25                               | 41.38%                                |
| 30+                              | 34.48% (floor)                        |

This creates a natural soft cap on company size — hiring more than ~20 employees has rapidly diminishing returns. Admin-editable.

## 9.9 One job per citizen

A citizen can hold only one job at a time. To change jobs, they quit their current job and accept another.

## 9.10 Job Market

The Job Market lists every open job offer across all unlocked countries. Each offer shows: company name (with link), company type (e.g., "Q3 Weapons Factory" / "Q2 Iron Mine"), country and region, salary in the company's local currency, **minimum work skill level required**, number of positions open, and an optional description. Citizens browse and filter by country, salary range, company type (raw vs manufacturing), and minimum work skill level (showing only offers they qualify for).

## 9.11 Accepting a job — auto-accept, no owner approval

When a citizen clicks "Accept Offer": the system checks the citizen meets the minimum work skill level. If yes, they become an employee immediately (no owner approval). If no, an error is shown. The owner cannot reject applications. The owner **can**: set the minimum work skill level when posting; fire employees at any time (no cooldown, no notice); edit the salary, description, position count; and close the offer manually. A job offer auto-closes when all positions are filled (the owner can re-open or post a new offer).

## 9.12 Quitting a job

A citizen can quit at any time, no cooldown, no penalty. They can immediately accept another job.

### 9.13 Out-of-raw-materials block

If a manufacturing company's owner lacks enough raw materials for the worker's potential output, the worker is blocked: error — "This company has insufficient raw materials. You cannot work here today." No salary, no XP, no work skill credit that day. The citizen can quit and accept another job immediately. The owner keeps raw materials stocked by: owning a raw company (vertical integration); buying on the Product Market; or receiving donations from citizens, country treasury, or MU.

### 9.14 No work tiers, boosters, or minimum wage

There are no work facility tiers and no work boosters; working is one flat action per day. (No Premium account exists, so no Premium work bonus.) There is no minimum-wage law — companies set salaries freely; market dynamics decide what attracts workers.

### 9.15 Hard Worker medal

Every 30 works, the citizen receives a **Hard Worker** medal (+5 Gold reward — §40). Counter resets after each award.

### 9.16 Click flows — the job market, accepting & quitting

§9.2 already specifies the **Work** click itself. The job lifecycle around it:

**Finding a job — the Job Market.** Open **Marketplace** → **Jobs** tab, or from the Work page when unemployed click **Job Market** (it opens this tab **pre-filtered** to offers you qualify for, with a 'show all jobs' toggle — §9.2). Each row shows company name (link), type (e.g., 'Q3 Weapons Factory'), country + region, salary in the company's local currency, **minimum work-skill level**, open positions, and an optional description. Use the filter rail (country, salary range, raw vs manufacturing, minimum work-skill level) — the list re-filters **inline**.

**Accepting an offer.** Click a row → the offer detail opens → click **Accept Offer**. The system checks your work-skill level against the offer's minimum: **pass** → you become an employee **immediately, with no owner approval**; a confirmation toast shows, **My Places** → **My Job** now points to this company, and the dashboard/Work page flips to the employed state. **Fail** → an inline error ('Requires work skill level N') and you are not hired. If you already hold a job, accepting another first prompts 'You will quit your current job at [company]. Continue?' — confirm to switch in one step. An offer that fills its last position auto-closes.

**Quitting.** Open **My Places** → **My Job** (or the Work page) → **Quit Job** → confirm → you are unemployed instantly (no cooldown, no penalty) and may accept another offer the same minute. Your work-skill level and accumulated working-day progress are unaffected.

**Blocked at Work (no raw materials).** When a manufacturing employer lacks raw materials, the Work page replaces the **Work** button with 'Your employer has no raw materials today; you couldn't work' plus a **Job Market** button (§9.13). No salary, XP, or working-day credit is granted that day; you may quit and accept elsewhere immediately.

## 10. Companies — Raw Material & Manufacturing

### 10.1 Two company categories

1. **Raw Material Companies** — extract raw materials from nothing. Three types: Iron Mine (Iron), Grain Farm (Grain), Oil Well (Oil).
2. **Manufacturing Companies** — consume raw materials to produce finished goods. Three types: Weapons Factory (Iron → Weapons), Food Factory (Grain → Food), Ticket Factory (Oil → Tickets).

**Total: 6 company types.** All 6 support Q1–Q5 quality tiers and the same upgrade ladder.

### 10.2 Raw materials are tradable goods

Iron, Grain, and Oil are tradable goods on the Product Market, appearing as their own product category alongside Weapons, Food, and Tickets. Raw materials have **no quality tiers** — just "Iron", "Grain", "Oil". Raw materials cannot be used directly by citizens (no effect if "consumed") — they exist purely as inputs for manufacturing.

### 10.3 Finished products from manufacturing

| Manufacturing company | Produces                                                                  | Consumes |
|-----------------------|---------------------------------------------------------------------------|----------|
| Weapons Factory       | Weapons (Pistol / Rifle / Machine Gun / Rocket Launcher / Tank for Q1–Q5) | Iron     |
| Food Factory          | Food (Q1–Q5)                                                              | Grain    |
| Ticket Factory        | Tickets (Q1–Q5)                                                           | Oil      |

### 10.4 Company quality (all 6 types)

A company has a quality rating from 1 to 5. Quality determines (1) the quality of the product produced and (2) the production multiplier:

| Company Quality | Production Multiplier |
|-----------------|-----------------------|
| Q1              | 1.0×                  |
| Q2              | 1.5×                  |
| Q3              | 2.5×                  |
| Q4              | 3.5×                  |
| Q5              | 5.0×                  |

A manufacturing company cannot make products of a different quality than its own tier (a Q3 weapons factory makes Q3 weapons only). Admin-editable, identical for raw and manufacturing.

## 10.5 Company creation

Any citizen, country, or MU can create a company. Creation requires: selecting one of the 6 types; selecting a country and region (any region of any unlocked country, including foreign); paying the creation cost in Gold.

**Default creation cost: 20 Gold** for any Q1 company (admin-editable). Once created, the company is Q1 by default. Creating a company awards a **Society Builder** medal — *removed*: there is no Society Builder medal anymore (see §40).

## 10.6 Company upgrades

| Upgrade | Default Gold cost |
|---------|-------------------|
| Q1 → Q2 | 20                |
| Q2 → Q3 | 50                |
| Q3 → Q4 | 100               |
| Q4 → Q5 | 200               |

Identical for raw and manufacturing. All admin-editable.

## 10.7 Total cost to reach Q5

Creation (Q1): 20 Gold. Upgrades to Q5:  $20 + 50 + 100 + 200 = 370$  Gold. **Total: 390 Gold** to build a Q5 company from scratch.

## 10.8 Foreign company ownership

A citizen of one country can own a company located in another country. The company is rooted in its host country — host-country economic rules apply (work tax to the host country; export tax to the host country when goods cross borders). The owner remains the same citizen.

## 10.9 Owner responsibilities

The owner posts job offers; fires employees at any time; decides what to do with produced goods (sell, hold, donate, distribute, use as input); maintains raw material supply (manufacturing); pays creation/upgrade costs in Gold; can sell the company on the Companies for Sale tab; and can donate the company to an MU or a country (one-way, irreversible). The owner cannot accept/reject job applications — they are auto-accepted if the applicant meets the work skill level threshold (§9.11).

## 10.10 Where produced goods go

- Citizen-owned company → goods go to the citizen owner's personal inventory.
- Country-owned company → goods go to the country's inventory (treasury goods storage).
- MU-owned company → goods go to the MU's storage.

The owner then decides what to do with the goods.

## 10.11 Where raw materials come from for manufacturing

A manufacturing company consumes raw materials from the owner's inventory. The owner keeps enough available via: vertical integration (owning a raw company); market purchase; or donation (from citizens, country treasury, or MU). If raw materials are insufficient when an employee clicks Work, the employee is blocked (§9.13) and the company produces nothing that work-action.

## 10.12 Listing currency for company-produced goods

When the owner lists company-produced goods on the marketplace, the listing is priced in the **owner's home country currency** — regardless of where the goods were produced. (An Indian owner lists in INR even if the goods were made in Pakistan.) For **MU listings**: the MU's home country currency. For **country/government listings**: the country's own currency.

## 10.13 Government-owned companies

A country can acquire a company three ways: (1) **Build from scratch** — congress passes a "Found Government Company" law specifying type, quality, region, and initial Gold cost; (2) **Buy on the open market** — the president (or a delegated congress member) buys a listed company within an "Authorize Government Company Acquisition" budget; (3) **Accept donations** — citizens may voluntarily donate a company to the government. There is **no forced nationalization**.

**Management**: the president (or delegate) executes operations within a congress-authorized budget ("Authorize Government Company Operations" law) — salaries, firing, raw material supply, goods disposition. **Salaries** are paid from the country treasury in the country's own currency; if it runs out, salaries can't be paid and employees can quit. **Selling/privatization**: congress passes a "Sell Government Company" law; the president lists it on Companies for Sale; proceeds go to the treasury. **Foreign government ownership**: allowed; host-country economic laws apply.

All government market and company operations are performed from the **Country page's Treasury Market & Operations section** by the president or an authorized congress delegate (see §11.10 and §24).

## 10.14 MU-owned companies

A citizen can donate a company to an MU (one-way, irreversible — it becomes MU property). MU-owned companies are managed by MU members holding the **Manage Companies** privilege. Goods/raw materials produced go to MU storage; salaries are paid from the MU's treasury currency. All MU company and market operations happen from the **MU page** (see §11.11 and §20).

## 10.15 Conquered regions and companies

When a region's ownership changes (one country conquers it in war), companies in that region: **stay put** (rooted in the region, do not migrate); **keep their current owner**; and **tax flow redirects** to the new ruling country (work tax now flows to the conqueror).

## 10.16 No company limits

There is no hard cap on the number of companies a citizen, country, or MU can own. Gold creation costs and ongoing salary/raw-material obligations are the natural friction.

## 10.17 Selling companies on the marketplace

A company owner can list their company on the "Companies for Sale" tab (§11.8). Company listings are in **Gold only** (no local currency for company sales).

## 10.18 Worked example

**Setup:** An Indian citizen owns a Q3 Iron Mine in an iron-rich Indian region, and a Q3 Weapons Factory in a different Indian region. **base** = 4.

**Day 1 — A worker with work skill level 8 clicks Work at the Iron Mine:**

- $(\text{base} + \text{level}) = 4 + 8 = 12$
- Company quality multiplier (Q3) =  $2.5\times$
- Region resource bonus (Iron Mine in iron region) =  $1.5\times$
- Employee count multiplier (first worker today) = 1.0
- Iron produced =  $12 \times 2.5 \times 1.5 \times 1.0 = 45 \text{ iron}$  → to the Indian owner's personal inventory.

**Day 1 — A different worker with work skill level 8 clicks Work at the Weapons Factory:**

- $(\text{base} + \text{level}) = 12$ ; Q3 multiplier =  $2.5\times$ ; no region bonus; first worker today = 1.0
- Goods produced =  $12 \times 2.5 \times 1.0 = 30 \text{ Q3 weapons}$
- Iron consumed =  $30 \times 3$  (Q3 consumes 3 iron each) = **90 iron**
- The owner's inventory has only 45 iron from the morning — insufficient.
- The worker is blocked (§9.13). No salary, no XP, no work skill credit. The owner must buy 45+ more iron or wait for more Iron Mine production.

This illustrates the supply-chain dynamic: a manufacturing owner must run their iron supply ahead of their weapons production, or the chain breaks. All values are admin-editable; the **base** constant tunes the whole economy.

## 10.19 Click flows — creating, upgrading, running, selling a company

All company management for a citizen lives under **My Places** → **My Companies**, which lists every company you own with its type, region, quality tier, and employee count. Government-company and MU-company operations

instead happen on the **Country page** and **MU page** respectively (context separation — §11.3); their flows are in §24 and §20.

**Creating a company.** On **My Companies**, click **Create Company** → a dialog opens: pick one of the **6 types** (Iron Mine / Grain Farm / Oil Well / Weapons Factory / Food Factory / Ticket Factory); pick a **country** (any unlocked country, including foreign) then a **region** (one of its 7); the dialog shows the **20 Gold** Q1 creation cost and your Gold balance. Click **Confirm** → if you hold 20 Gold it is deducted (top-bar Gold updates inline), the new **Q1** company is created in that region, appears at the top of My Companies, and its management page opens. If you lack 20 Gold, Confirm is disabled with a 'Buy Gold' hint. (No medal is awarded — the Society Builder medal was removed, §40.)

**Upgrading quality.** Open the company's management page → the **Upgrade** section shows the current tier and the next-tier cost (Q1 → Q2 20, Q2 → Q3 50, Q3 → Q4 100, Q4 → Q5 200 Gold). Click **Upgrade to Q[n]** → confirmation popup with the Gold cost → **Confirm** → Gold deducted inline, the quality badge increments immediately, and the new production multiplier and raw-material consumption tier take effect on the next Work click.

**Posting a job offer.** Management page → **Employees & Jobs** → **Post Job Offer** → set salary (in your home-country currency), **minimum work-skill level**, number of positions, optional description → **Publish** → the offer appears on the Job Market (§9.10) instantly. From the same panel you can edit salary/description/positions or **Close Offer** at any time; an offer auto-closes when all positions fill (re-open or post a fresh one).

**Firing.** On **Employees & Jobs**, each employee row has a **Fire** button → confirm → the employee is removed immediately (no cooldown, no notice) and is notified (§35).

**Listing produced goods.** Produced goods land in your personal inventory (§10.10); list them from **Marketplace** → **Product Market** → **Sell** (the personal selling flow in §11), priced in your **home-country currency** regardless of where they were produced (§10.12).

**Keeping a manufacturer stocked.** A manufacturing company draws raw materials from **your inventory** at the moment an employee clicks Work (§9.6, §10.11) — there is no separate 'load raw materials' button. Keep enough on hand by working/owning a raw company, buying raw materials on the Product Market, or accepting donations; if there isn't enough at the Work click, that worker is blocked (§9.13).

**Selling the whole company.** Management page → **Sell / Donate** → **List for Sale** → enter a **Gold** price (no min/max), 7-day duration → **Confirm** → it appears on **Marketplace** → **Companies for Sale** (§11.8). Cancel any time before it sells. On sale: you receive the Gold, ownership transfers immediately, the company stays in its region, its existing **produced-goods inventory stays with you** (the buyer gets the shell), employees carry over (the new owner may fire them), and your open job offers on it are cancelled.

**Donating the company (one-way).** Management page → **Sell / Donate** → **Donate Company** → choose to a **Military Unit** you belong to or to a **Country** → confirm the irreversible-transfer warning → ownership moves to the MU (managed by members with the Manage Companies privilege; goods to MU storage) or the government (becomes a government company; goods to country inventory). There is no take-back.

---

## 11. The Unified Marketplace

### 11.1 One global marketplace

There is one global marketplace, not per-country marketplaces. Any seller from any country can list goods. Any buyer from any country can purchase from any listing (subject to the seller's foreign-buyer toggle — §13).

### 11.2 The 4 tabs

1. **Product Market** — buying and selling physical goods (raw materials and finished products).
2. **Monetary Market** — swapping between currencies.
3. **Job Market** — finding employment (§9.10).
4. **Companies for Sale** — buying and selling entire companies.

### 11.3 Context separation — who pays and who receives

**This is a hard rule.** All economic actions are performed from the page of whoever's money is being used:

| Acting as    | Where the action happens                                         | Funds / inventory                    |
|--------------|------------------------------------------------------------------|--------------------------------------|
| Yourself     | The Marketplace (and a citizen's profile for donations)          | Your wallet / your inventory         |
| Your MU      | The <b>MU page</b> ("MU Market & Treasury" section)              | MU treasury / MU storage             |
| Your Country | The <b>Country page</b> ("Treasury Market & Operations" section) | Country treasury / country inventory |

A regular citizen only ever sees personal actions on the Marketplace and can never accidentally spend MU or country funds. MU actions require the relevant MU privilege (§20). Country actions are performed only by the president or an authorized congress delegate (§24). Every MU action is logged to the MU activity feed; every country action is logged to the public country action log.

### 11.4 Product Market — what's listable

- **Finished goods (Q1–Q5 tiers each):** Weapons (Pistol, Rifle, Machine Gun, Rocket Launcher, Tank), Food (Q1–Q5), Tickets (Q1–Q5).
- **Raw materials (single tier each):** Iron, Grain, Oil.

So **18 distinct listable item types** (15 finished + 3 raw).

### 11.5 Listing currency

Every listing is denominated in the **seller's home country currency** (an Indian citizen lists in INR; an American in USD). Physical location and production location do not change this. MU listings → MU's home country currency. Country/government listings → the country's own currency.

## 11.6 Buying — the confirmation popup

A buyer pays in the listing's currency. When the buyer clicks **Buy**, a confirmation popup shows the full breakdown before they confirm: base price, VAT, import tax (if cross-border), **total to pay**, and their currency balance. If they lack the required currency, the **Confirm button is disabled** with a "swap on the Monetary Market" hint. There is no automatic currency conversion at checkout. The seller's net proceeds are **private** (not shown to the buyer). See §13 for the full tax model.

## 11.7 Product Market filters & rules

Filterable by category (Finished Goods / Raw Materials), product type, quality (finished goods only), country of seller, price range, and quantity available; sortable by price, quality, recency.

- A citizen can have up to **100 active listings** simultaneously (admin-editable hard cap; universal — no Premium difference).
- Countries and MUs are each subject to the 100-listing cap.
- Listings **expire after 7 days** (admin-editable). Expired listings return goods to the seller's inventory.
- A seller can cancel their own listing at any time before purchase.
- No travel is required to list goods in any market — the global marketplace eliminates this distinction.

## 11.8 Companies for Sale tab

Lists entire companies offered for sale.

**Listing a company:** the owner clicks "List for Sale" on the company management page, sets the **Gold price** (no minimum/maximum), with a 7-day duration (admin-editable; auto-cancels if not sold). The owner can cancel manually before purchase.

**Buying a company:** any citizen (with sufficient Gold), country (via "Authorize Government Company Acquisition" law, executed from the Country page), or MU (via a member with the Spend MU Funds / Manage Companies privilege, from the MU page) can buy. The buyer pays the listed Gold; the seller receives it; ownership transfers immediately; the company stays in its current region; existing employees remain (the new owner can fire them); existing job offers are cancelled (new owner posts fresh ones); existing produced-goods inventory stays with the previous owner (the buyer gets the company shell, not the goods).

**Shown in a listing:** company type, country and region, current quality tier, current employee count, owner's username (link), listed Gold price, time remaining. Filters: company type, country, quality tier, price range.

## 11.9 Monetary Market

Citizens, countries, and MUs post buy or sell orders between any two currencies. Orders specify amount, target currency, and price. Funds are **escrowed** when an order is placed (locked until matched or cancelled). The system auto-matches opposite orders when prices align; partial fills are allowed. Orders expire after 7 days (admin-editable); cancelled/expired orders return escrowed funds. **No transaction fee on Monetary Market trades.**

**Display** for each pair (e.g., Gold ↔ INR): order book (all active buy/sell orders with price & quantity), current best price (highest bid, lowest ask), last trade price, 24h trade volume, recent trade history (last 20), and a price chart (24h / 7-day / 30-day).

## 11.10 Country participation

A country's treasury is a multi-currency wallet. From the **Country page** (president or delegate), the country can: buy goods (paid from treasury, to country inventory); sell goods (in the country's own currency, proceeds to treasury); buy companies (via "Authorize Government Company Acquisition" law); sell government companies (via "Sell Government Company" law); and trade on the Monetary Market. These actions are authorized via congress laws; the president (or delegate) executes within the budget; every action is logged in the public country action log (§23.7).

## 11.11 MU participation

An MU's treasury is a multi-currency wallet and goods inventory. From the **MU page** (members with the relevant privilege), the MU can: buy goods; sell goods (in the MU's home country currency); buy companies; sell MU-owned companies; and trade on the Monetary Market. Proceeds go to the MU treasury.

## 11.12 Click flows — listing, buying, monetary orders

§11.6 covers buying a product. The other marketplace actions all start from **Country menu** → **Marketplace** and use **personal** funds/inventory only (§11.3):

**Listing a product for sale (Product Market → Sell).** On the Product Market tab click **Sell** (or the **Sell** shortcut on an inventory row). Pick the item type + quality from your inventory, set quantity and unit price (in your home-country currency), and set the '**Allow foreign buyers**' checkbox (**default ON** — §13.3). A **net-proceeds preview** updates live ('Domestic sale: net X · Foreign sale: net Y', reflecting export tax + the 1% market fee — §13.3). Click **List** → the goods move from inventory into the listing (held in escrow) and it goes live globally for up to **7 days**. You may hold up to **100 active listings**.

**Cancelling / expiry.** Open **Marketplace** → **(your) Listings** (also reachable from Inventory → 'View Marketplace Listings'). Each listing has **Cancel** → the goods return to your inventory instantly. Unsold listings auto-expire at 7 days and likewise return the goods.

**Buying with the confirmation popup (recap).** Click **Buy** on any listing → a popup shows base price, VAT, import tax (if cross-border), **total**, and your balance in that currency; if you're short, **Confirm** is disabled with a 'swap on the Monetary Market' hint (no auto-conversion). **Confirm** → currency deducted, goods land in your inventory, both ledgers update; the seller's net proceeds are private to you (§11.6).

**Buying a company (Companies for Sale).** On the **Companies for Sale** tab, filter by type/country/quality/price, click a listing to see type, region, quality, employee count, owner, Gold price, and time left, then **Buy** → confirmation popup with the Gold cost → **Confirm** → Gold transfers to the seller, ownership moves to you immediately, the company appears in **My Companies** and stays in its region, existing employees carry over (you may fire them), the previous owner's open job offers are cancelled, and the previous owner keeps the produced-goods inventory.

**Monetary Market — posting a currency order.** On the **Monetary Market** tab pick a pair (e.g., Gold ↔ INR). The page shows the **order book** (live buy/sell orders with price + quantity), best bid/ask, last trade price, 24h volume, recent trades (last 20), and a 24h / 7-day / 30-day price chart. Click **Buy [currency]** or **Sell [currency]**, enter amount + price → **Place Order** → the funds you're offering are **escrowed** immediately (locked). The engine auto-matches opposite orders when prices cross (partial fills allowed); **no transaction fee**. Orders expire after 7 days; **Cancel** an unmatched order to return the escrow. A fill triggers a notification (§35).

---

## 12. Currencies, Treasury & The World Bank

---

### 12.1 Currencies

Two kinds of currency exist:

1. **Gold** — universal, scarce currency for major purchases (company creation, MU creation, citizenship fees, war declaration, MU upgrades, company purchases, Name Change, Pulse promotion, etc.). **Gold is purchasable with real money** (§42).
2. **Local currencies** — one per country (INR, USD, EUR, ...). Used for salaries, product purchases, and country-level economic activity.

### 12.2 Wallets

Every entity holds a multi-currency wallet: a citizen holds Gold + any number of local currencies; a country treasury holds Gold + any local currency; an MU treasury holds Gold + any local currencies.

### 12.3 Where Gold comes from

- **Real-money purchases** (the primary source — §42)
- Super Admin grants (from a player's profile — §42)
- Battle Hero rewards (per round — §15)
- Resistance Hero rewards (§18)
- Medal awards (5 Gold per medal earned, infinite times across the 8 medal types — §40)
- Mission rewards (§37)
- Login streak rewards (§39)
- Level-up rewards from level 7+ (5 Gold per level-up — §38)

### 12.4 Where Gold goes

Creating companies (20 Gold for Q1) and upgrading them; buying companies; creating MUs and upgrading MU levels and slot expansions; creating parties (20 Gold); declaring war (30 Gold); signing MPPs (40 Gold per side); joining a coalition (50 Gold per joiner) / creating one (100 Gold founder); declaring Natural Enemy (20 Gold); citizenship application fees (default 5 Gold); starting resistance wars (20 Gold); printing local currency (1 Gold per 1,000 printed); creating a newspaper (2 Gold); Name Change (40 Gold); presidential candidacy fee (10 Gold); party leader candidacy fee (2 Gold); **Pulse post promotion** (admin-priced, Gold removed from the game entirely); and donations.

### 12.5 Printing local currency

A country can mint new local currency:

1. A congress member proposes the "Issue Currency" law, specifying the amount to print.
2. Gold cost computed: **1 Gold per 1,000 local currency** (admin-editable rate).
3. Required Gold escrowed from the country treasury at proposal.
4. Congress votes (24h, simple majority).

5. If passed: new local currency appears in the treasury; escrowed Gold transferred to the World Bank.
6. If failed: escrowed Gold returns to the treasury.

No cooldown, no print cap. Only the Gold cost limits printing.

## 12.6 The World Bank

A global, server-wide entity (not a country, not a player). It serves as: (1) the recipient of all Gold paid for currency printing; (2) the recipient of all **Market Fees** (1% of every Product Market sale, paid by the seller, in the listing's currency); (3) the recipient of Gold from coalition creation/joining costs and Natural Enemy declarations; and (4) a public ledger of currency printing.

**Public:** the print log is fully public — anyone can view every currency-print event (country, date, amount printed, Gold cost, authorizing law). **Hidden:** the World Bank's current Gold balance and currency holdings are **not** public. The World Bank does not spend, lend, or distribute — it only collects.

**Note:** Gold spent on **Pulse post promotion** does **not** go to the World Bank — it is removed from the game entirely (a pure sink — §30).

## 12.7 No interest, no banking products

The World Bank does not lend, pay interest, or offer financial products in v1. A loan system is deferred (§51).

## 12.8 Citizen donations to country treasury

A citizen can voluntarily donate currency or goods to their country's treasury via a "Donate to Treasury" button on the country page. Instant, no fee, recorded in the public country action log. (Anti-cheat caps and new-account restrictions apply — §43.)

## 12.9 Country treasury usage

The treasury can be spent only via: congress laws authorizing specific spending; auto-deductions for active obligations (MU supply donations authorized by law, currency-printing Gold escrow, etc.); and salary payments for government-company employees. **No citizen, including the president, can withdraw treasury funds for personal use.** Every outflow is logged.

## 12.10 MU treasury usage

The MU treasury is a multi-currency wallet plus inventory holding currency, items (food/weapons/tickets/raw materials), and ownership of MU companies. Sources: member donations; MU company production; items purchased by the MU; currency-trading proceeds; donations from countries (via "Donate to MU" law). **MU storage is publicly visible to anyone** (same transparency as country treasury).

## 12.11 Click flows — printing currency, treasury donations

Most Gold/currency *spending* happens inside other flows (creation costs, fees, war). The treasury-specific actions:

**Printing local currency (Issue Currency law).** This is a congress law (§12.5). A congress member opens **Country page** → **Congress & Legislation** → **Propose Law** → **'Issue Currency'** and enters the **amount to print**; the form computes the cost live at **1 Gold per 1,000** and shows it. On **Propose**, that Gold is **escrowed from the treasury** and a **24-hour** vote opens (simple majority). On passage the new local currency appears in the treasury and the escrowed Gold moves to the **World Bank**; if the law fails or is withdrawn before votes, the Gold returns to the treasury. (Full law-proposal click path: §23.)

**Donating to the treasury.** Any citizen opens **Country page** → **'Donate to Treasury'** → choose **currency or goods** → pick type/quality/amount → **Confirm** → it transfers instantly, no fee, and is recorded in the **public country action log** (§23.7). Anti-cheat caps and the 7-day new-account lock apply (§43).

**Viewing the World Bank print log.** The **currency-print log is public**: open the **Country page** → **currency-printing log entries** (the same data is surfaced via the action log) to see every print event (country, date, amount, Gold cost, authorizing law). The World Bank's own Gold balance is **not** shown (§12.6).

---

## 13. Taxation

There are six distinct taxes/fees in the game.

### 13.1 The six taxes — who pays, who receives

| # | Tax             | Paid by                                | Triggered on                                        | Currency           | Recipient                  |
|---|-----------------|----------------------------------------|-----------------------------------------------------|--------------------|----------------------------|
| 1 | VAT             | <b>Buyer</b>                           | All Product Market purchases (on base price)        | Listing's currency | Buyer's country treasury   |
| 2 | Import Tax      | <b>Buyer</b>                           | Cross-border purchases only (on base price)         | Listing's currency | Buyer's country treasury   |
| 3 | Export Tax      | <b>Seller</b> (deducted from proceeds) | Cross-border sales only (on base price)             | Listing's currency | Seller's country treasury  |
| 4 | Market Fee      | <b>Seller</b> (deducted from proceeds) | Every Product Market sale (domestic + cross-border) | Listing's currency | World Bank                 |
| 5 | Work Tax        | <b>Employee</b> (deducted from salary) | Each Work click (on salary)                         | Salary's currency  | Company's country treasury |
| 6 | Citizenship Fee | <b>Applicant</b>                       | Citizenship application submission                  | Gold               | Joining country treasury   |

#### Summary of the money split:

- **Buyer pays:** base price + VAT + import tax (import only on cross-border).
- **Seller nets:** base price – export tax (cross-border only) – market fee (always).

### 13.2 Taxation rules

- All taxes computed on the **base price** (or base salary). No tax-on-tax.
- All taxes paid in the listing's currency (salary's currency for work tax, Gold for citizenship fee).
- **Market Fee** is fixed globally (default 1%, only admins can change).
- All other tax rates are set by congress law (see §23).
- **Companies for Sale** transactions: subject to the **Market Fee only** (1%, in Gold). They are **not** subject to VAT / Import / Export tax (a company is not an "export").

### 13.3 The "Allow foreign buyers" toggle (seller side)

When creating a listing, the seller sees an "**Allow foreign buyers**" checkbox, **default ON**:

- **ON:** anyone can buy; export tax applies to cross-border sales.
- **OFF:** only citizens of the seller's own country can buy; no export tax ever applies. The listing is shown to foreign citizens but **greyed out / labeled "domestic only"** so they understand it exists but the seller opted out.

When the seller sets a price, a **net-proceeds preview** is shown — e.g., "Domestic sale: net 99 · Foreign sale: net 94" — so the seller is never surprised by export tax + market fee.

## 13.4 Worked examples

**Example 1 — Domestic purchase.** Indian buyer, Indian seller. Listing: 100 INR. India VAT 5%, Market Fee 1%.

| Line item                     | Amount         | Recipient              |
|-------------------------------|----------------|------------------------|
| Base price                    | 100 INR        | (gross)                |
| VAT (5%) — buyer pays         | +5 INR         | India's treasury       |
| Buyer pays total              | <b>105 INR</b> |                        |
| Market Fee (1%) — seller pays | −1 INR         | World Bank             |
| Seller nets                   | <b>99 INR</b>  | Indian seller's wallet |

**Example 2 — Cross-border purchase.** Indian buyer, US seller, foreign buyers allowed. Listing: 100 USD. India VAT 5%, India Import Tax 10%, USA Export Tax 8%, Market Fee 1%.

| Line item                     | Amount         | Recipient                 |
|-------------------------------|----------------|---------------------------|
| Base price                    | 100 USD        | (gross)                   |
| VAT (5%) — buyer pays         | +5 USD         | India's treasury (as USD) |
| Import Tax (10%) — buyer pays | +10 USD        | India's treasury (as USD) |
| Buyer pays total              | <b>115 USD</b> |                           |
| Export Tax (8%) — seller pays | −8 USD         | USA's treasury (as USD)   |
| Market Fee (1%) — seller pays | −1 USD         | World Bank (as USD)       |
| Seller nets                   | <b>91 USD</b>  | US seller's wallet        |

The buyer never funds a foreign government — the buyer pays only VAT + import (both to the buyer's own country). The seller's own country taxes the seller via export tax.

**Example 3 — Salary with work tax.** An employee earns 100 PKR at a Pakistani company. Pakistan Work Tax 15%.

| Line item         | Amount          | Recipient           |
|-------------------|-----------------|---------------------|
| Salary            | 100 PKR (gross) |                     |
| Work Tax (15%)    | −15 PKR         | Pakistan's treasury |
| Employee receives | <b>85 PKR</b>   | Employee's wallet   |

The employee's home country gets nothing — work tax flows to where the company is located.

### 13.5 Click flows — where tax is applied; changing a rate

Taxes are applied automatically at the moment of each purchase, sale, work, or citizenship action — there is no separate 'pay tax' step. The interactive surfaces:

- **As a buyer:** the confirmation popup itemizes base price, VAT, and (cross-border) import tax before you confirm (§11.6) — both go to **your** country's treasury.
- **As a seller:** when listing, the '**Allow foreign buyers**' toggle (default ON) and the **net-proceeds preview** show how export tax (cross-border only) and the 1% market fee are deducted from your proceeds (§13.3).
- **As an employee:** work tax is deducted from your salary automatically on each Work click; the Work page shows the **net** salary received (§9.2; §13.4 Example 3).

**Changing a tax rate (congress).** VAT, Import, Export, Work Tax, and the Citizenship Fee are each set by law. A congress member opens **Country page** → **Congress & Legislation** → **Propose Law**, picks the relevant 'Change ...' law, enters the new rate, and **Proposes** → 24-hour vote (simple majority). On passage the new rate applies immediately to all subsequent transactions (full law flow: §23). The **Market Fee** is admin-only (§13.2) and cannot be changed by congress.

---

## 14. Travel

### 14.1 Why travel

A citizen can move from one region to another (potentially across countries). Travel is required to: fight in a battle outside the citizen's current allied region (§15); start a resistance war (must be physically in the contested region — §18). Most other activities (work, market, messaging, Pulse, chat) do **not** require travel — they work remotely.

### 14.2 How travel works

To travel, a citizen must: (1) hold a ticket (Q1–Q5); (2) choose a destination country (from currently-unlocked countries); (3) choose a destination region (one of the 7); (4) click **Travel** — the ticket is consumed and HP is deducted. **No distance/range mechanic** — every region is reachable in one step from anywhere.

### 14.3 Travel to conquered regions

When a region has been conquered, it belongs to the conquering country. To travel there, select the **current controlling country** as destination. In that country's region list, the conquered region appears with both its current owner and an original-owner label, e.g., "Kashmir (originally India — currently controlled by Pakistan)." Click and travel normally. A citizen of the rightful owner wanting to start a resistance war in their occupied region uses this same process.

### 14.4 HP cost by ticket quality

| Ticket       | HP cost |
|--------------|---------|
| Q1 (lowest)  | 50      |
| Q2           | 40      |
| Q3           | 30      |
| Q4           | 20      |
| Q5 (highest) | 0       |

If the citizen has less HP than the ticket requires, travel is blocked. Q5 tickets cost 0 HP and allow unlimited travel within a day.

### 14.5 Tickets are consumable; no cooldown; no extra cost

Each successful travel consumes one ticket. If travel is blocked, the ticket is **not** consumed. There is no cooldown between travels — a citizen with enough HP and tickets can travel repeatedly. Travel costs only the ticket and HP — no Gold or currency fee, no distance modifier.

**Edge case — destination auto-locks:** auto-locking is governed solely by citizenship count (§3.8). A foreigner standing in a country does **not** keep it unlocked; if it auto-locks, the foreigner is relocated to their own home country's capital.

## 14.6 Click flows — the three ways to travel

§14.2 specifies the core Travel action. Its three entry points all lead to the same flow:

1. **Country menu** → **Travel**. Opens the travel page: choose a destination **country** then **region**, see the **HP cost** for your selected ticket quality and your current HP, then click **Travel** → the ticket is consumed, HP is deducted, your top-bar location updates, and you land on the destination region page. If your HP is below the ticket's cost, **Travel** is disabled with the reason and the ticket is **not** consumed.
2. **Region page** → 'Travel here' (§45.8): pre-selects that region as destination; pick a ticket quality and confirm.
3. **Battle wall / Battles page** → 'Travel to [Region] to fight' (§15.11–§15.12): travels you into an eligible region for that battle, then drops you on the battle wall ready to fight.

Choosing a **conquered** region: select its **current controlling** country; the region shows its 'originally [X] — currently controlled by [Y]' label (§14.3); travel then proceeds normally.

---

## 15. Combat & Battles

### 15.1 Battle structure

Every battle has the same structure:

- **15 rounds total.**
- Each round lasts **60 minutes** (1 hour).
- Battles end when one side wins **8 rounds** (so battles last between 8 and 15 hours total).

### 15.2 Round mechanics

Within a round, both sides accumulate damage as their fighters attack. At the end of the 60-minute round, the side with more total damage wins the round. **Ties go to the defender.** Damage resets to 0:0 at the start of each new round — no carryover.

### 15.3 Battle win

The first side to win 8 of 15 rounds wins the battle. The battle ends immediately upon the 8th round win.

### 15.4 Attack actions

A citizen permitted to fight (see §15.7) can perform two attack actions:

- **Fight** — one attack, costs 10 HP, deals one damage roll. +1 XP per fight. Consumes 1 weapon.
- **Berserk** — combined 5 attacks in one click, costs 50 HP, deals 5 independent damage rolls summed into one big hit. Awards +25 XP total per Berserk. Consumes 5 weapons.

### 15.5 The damage formula

```
damage = strength × weapon_quality_bonus × (1 + sum_of_all_active_modifiers) ×
random(0.8 to 1.2)
```

Where:

- `strength` = the attacking citizen's current strength stat.
- `weapon_quality_bonus` = depends on the weapon used (§15.6).
- `sum_of_all_active_modifiers` = the sum of all damage modifier percentages that apply to this attack (§15.8).
- `random(0.8 to 1.2)` = a per-hit random variance of ±20%.

If the citizen fights without a weapon (bare hands), `weapon_quality_bonus = 0.5`.

## 15.6 Weapon quality bonuses

| Weapon                 | Quality Bonus | Display name    |
|------------------------|---------------|-----------------|
| No weapon (bare hands) | 0.5×          | —               |
| Q1                     | 1.0×          | Pistol          |
| Q2                     | 1.5×          | Rifle           |
| Q3                     | 2.5×          | Machine Gun     |
| Q4                     | 3.5×          | Rocket Launcher |
| Q5                     | 5.0×          | Tank            |

A weapon is consumed per attack. Admin-editable per server.

## 15.7 Who can fight in a battle

To fight (regular war or resistance war), the citizen must:

1. Be physically located in a region of a country that is either **directly involved** (attacker or defender) **OR** an **MPP ally or Coalition ally** of either side.
2. The citizen can **freely choose which side** to fight for — citizenship does not restrict side selection.

Citizens in unallied neutral countries cannot fight and must travel first.

## 15.8 Damage modifiers

All damage modifiers are **additive** — they sum together and the total is applied as one multiplier. All admin-editable.

| Modifier       | Triggered when                                                                         | Default %                            |
|----------------|----------------------------------------------------------------------------------------|--------------------------------------|
| Natural Enemy  | Fighting against your country's declared Natural Enemy in a direct war between the two | +10%                                 |
| Home Region    | Fighting in a battle taking place in your home region                                  | +10%                                 |
| Same Country   | Fighting in a battle where your home country is a combatant                            | +5%                                  |
| MPP Ally       | Fighting on the side of a country that signed an MPP with your country                 | +10%                                 |
| Coalition      | Fighting on the side of a coalition member country                                     | +1% per member country, max +12%     |
| Military Rank  | Your current military rank (Rank 1 = +1%, Rank 20 = +20%)                              | +1% per rank                         |
| MU Daily Order | You are fighting the specific battle/side set as your MU's daily order                 | +5% / +10% / +15% / +20% by MU level |

**Bonuses do NOT stack across orders:** the MU bonus and the Coalition bonus do not stack on the same hit (they are tied to different battle orders). If both apply, the **MU order takes precedence** as the more specific affiliation.

**Removed/excluded modifiers:** Defense System, Damage Booster, Premium combat bonus, Equipment bonus, Elixir bonus, Hospital bonus. None apply. (There is no Premium account.)

## 15.9 Battle Hero

At the end of each round, the citizen who dealt the most total damage in that round becomes that round's **Battle Hero** (up to 15 per battle, one per round). Ties broken by earliest attack timestamp.

**Battle Hero reward per round (admin-editable):** 5 Gold; +50 XP; a Battle Hero medal (counted on profile, §40).

## 15.10 Conquest outcome

When a battle ends:

- **Attacker victory in a conquest battle (war):** the attacker takes the contested region; the region's color changes; companies in the region stay put; tax flow redirects.
- **Defender victory:** no region change.
- **Resistance war:** see §18.5.

No currency tribute, no treaty terms, no reparations. Wars are about territory only.

## 15.11 The battle wall — real-time battle page

A battle page (visible to all citizens) shows in real time:

- Battle name — e.g., "India vs Pakistan: Kashmir (Round 5 of 15)".

- Both sides' flags and country names.
- Current round number and time remaining — e.g., "Round 5 — 32 min remaining".
- Current round damage totals — Side A vs Side B, with a visual bar.
- Round history — which side won each completed round.
- Top damage dealers of the current round (top 10 leaderboard, updated live).
- Battle Hero leaderboard — current top damage dealer (provisional Battle Hero).
- **Fight / Berserk** buttons (if eligible — §15.7).
- **Side toggle** — fighter selects which side to attack for.
- **Weapon selector** — fighter selects which weapon quality to use from inventory.
- **"Travel here"** shortcut (if not yet present in an eligible region).

All numbers update live (server-side aggregation, refreshed every few seconds).

## 15.12 Battles page

The dashboard **Fight** button always routes to the **Battles page** (accessible from the Map / War and Politics page). It shows all currently-active battles, grouped:

1. **Battles you can fight in now** (you're in an eligible region) — the **Fight** button is active.
2. **Your country & allies' battles** (relevant, need to travel) — each shows **"Travel to [Region] to fight in this battle"** + a Travel button.
3. **All other active battles** (worldwide).

Each battle row: both sides, current round, time remaining, current damage totals, and your eligibility status. Filters: country involved, battle type (war / resistance war), region. Sortable by start time, round number, total damage. Each row links to the battle page (§15.11).

## 15.13 Click flows — fighting and Berserk

§15.11 describes the battle wall and §15.12 the Battles page. The attack click path itself:

**Fighting in a battle.** Reach a battle wall via **dashboard Fight** → **Battles page**, the **Map** battle overlay, or **War and Politics** → **Battles List**, and open a battle where you are eligible — you must be physically in an involved or allied region (§15.7); if you aren't, the wall shows **"Travel here"** instead of attack buttons. On the wall:

1. Use the **Side toggle** to choose which side to fight for (citizenship does not restrict this — §15.7).
2. Use the **Weapon selector** to pick a weapon quality from your inventory (or fight bare-handed at 0.5×).
3. Click **Fight** (one hit, **−10 HP**, **+1 XP**, consumes 1 weapon) or **Berserk** (five hits in one click, **−50 HP**, **+25 XP**, consumes 5 weapons).

Each click resolves the damage roll server-side and updates **inline, with no reload**: your HP (top bar + wall) drops, the weapon count decrements, your hit posts to the live feed ('You hit for X'), and the round's damage bars, the top-10 damage list, and the provisional Battle Hero refresh within a few seconds. If you lack the HP for the action, the button is disabled ('Not enough HP — eat food'); if you run out of the selected weapon, the selector flips to the next available quality (or bare hands). When a round ends the wall rolls to the next round automatically; when a side reaches **8** round wins the battle closes and the page becomes the results/replay archive (§16).

## 16. Battle Replay System

---

### 16.1 Purpose

A **replay** is a showcase system — it lets players and MUs demonstrate how they performed in a battle. It is social proof ("watch how our MU carried this battle," "see my Battle Hero round") and feeds directly into Pulse sharing and the competitive/bragging culture that drives engagement.

### 16.2 What a replay is

Every completed battle can be watched as a replay. A replay is **not** a compressed summary of the whole hour — instead, each round's segment is the **literal final 30 seconds of real gameplay** from that round (the 0:30 → 0:00 window), shown at normal speed exactly as it happened. The per-round clips are stitched back-to-back across every round that was played, ending with a final results screen. A full 15-round battle = ~7.5 minutes (15 × 30s); a battle won in 8 rounds = ~4 minutes (8 × 30s).

Every round that was played gets its last-30-seconds clip — regardless of whether anything notable happened in that window (a quiet round still shows its real final 30 seconds).

### 16.3 What each 30-second round segment shows

- **Every hit that actually landed in the final 30 seconds** — all the real "PlayerX hit for 4,200" / "PlayerY berserked for 18,500" events as they occurred in that window. Because 30 seconds of real time is a small, bounded volume, **all** hits in the window are shown faithfully — there is no "notable hits only" curation.
- **The damage race** — both sides' damage totals, **opening at the real standing totals at the 30-seconds-remaining mark** (e.g., "India 4.2M – Pakistan 4.0M"), then climbing as the final real hits land.
- **The round result** — which side won the round, flashed at the end of the segment.
- **Running round score** (e.g., "Rounds: India 3 – Pakistan 2").

### 16.4 Final results screen

Winner + final round score; **all Battle Heroes** (the top damage dealer of each round, up to 15); **top 10 overall damage dealers** of the whole battle; region outcome (conquered / defended); total damage by each side.

### 16.5 Faithful reconstruction

The replay uses the **actual recorded hits and exact damage totals** from the final 30 seconds of each round — everything shown really happened, at real speed, with no alterations. The standing totals at the start of each clip, every hit in the window, and the round result are all exact and real.

### 16.6 Playback controls

Play / pause; a **round scrubber** (jump to any round); and a **speed toggle** (1× / 2× / 4×). This lets a viewer skip to the decisive round.

## 16.7 Sharing on Pulse

A replay can be posted as a rich "**Battle Replay**" card on Pulse (§30); others click the card to watch.

## 16.8 Access & storage

A "**Watch Replay**" button appears on every finished battle's results page (the battle page becomes a results/archive page after the battle ends) and in the Battles List archive. Replays are **permanent**, reconstructed from stored hit data (timestamp, attacker, damage, side per hit) for the final 30 seconds of each round — not video files, so storage is cheap. Because only the closing 30 seconds of each round needs to be retained for playback (not the full hour), the stored data is naturally bounded; exact totals and round outcomes are always retained.

## 16.9 Click flows — watching and sharing a replay

**Watching a replay.** On any **finished** battle's results page (the battle wall becomes a results/archive page once the battle ends) or any row in the **Battles List archive**, click **Watch Replay**. The replay player opens and plays the stitched **final-30-seconds-per-round** clips in order (§16.2), each opening at the **real standing totals** at the 0:30 mark and climbing through the real hits. Use **Play / Pause**, the **round scrubber** (jump to any round), and the **speed toggle (1× / 2× / 4×)** to skip to the decisive round (§16.6). Playback ends on the **results screen** (winner, round score, all Battle Heroes, top-10 overall, region outcome, total damage per side — §16.4).

**Sharing a replay on Pulse.** From the replay or results page click **Share to Pulse** → a Pulse composer opens **pre-attached** with the **Battle Replay** rich card → add optional text (280 chars) and a scope → **Post** (§30). Anyone who sees the post clicks the card to open the same replay player.

---

## 17. Wars

---

### 17.1 Declaring war

A country can declare war on another country only if:

- The target shares a border (locked countries skipped — §3.3).
- The target is not within its 30-day post-unlock grace period (§3.4).
- The **president** of the attacking country proposes a "Declare War" law (**only the president** can propose this specific law — it is never delegatable).
- **30 Gold** is escrowed from the attacking country's treasury when the law is proposed.
- The attacking congress passes the law (24h voting, simple majority).

If the law passes, the 30 Gold is consumed and war begins. If it fails, the Gold returns.

### 17.2 War initiative

Inside an active war, only the country holding **initiative** can start the next battle. A country has initiative when (1) there is no active battle in this war right now, **AND** (2) the country has not lost a battle in this war in the past 24 hours. If 24 hours pass without the initiative-holder starting a battle, initiative is lost and passes to the other side. Declaring war does not itself grant initiative — initiative is unowned at the start; the first country to start a battle takes it.

### 17.3 Starting a battle within a war

The country with initiative chooses a region of the opposing country to attack. The region must be **adjacent** to the attacker's current territory (or to a region already conquered in this war). A battle then runs per §15.

**Who can start a battle:** only the **sitting president** of the country with initiative. Starting a battle is **not delegatable** (same restriction as the "Declare War" proposal — it stays president-only). If the president is offline, the war stalls — no one else can open the next battle, and initiative passes to the enemy after 24 hours of inactivity (§17.2).

**Click path (president only):**

1. The president opens the **Country page** → **"War Operations"** section (visible only to the president).
2. The panel shows the war's **initiative status**. If the country holds initiative, the **"Start Battle"** button is active; otherwise it is greyed out with the reason ("Enemy holds initiative" / "You lost a battle in the last 24h" / "A battle is already active in this war").
3. The president taps **"Start Battle"** → a **target-region picker** opens.
4. The president picks the enemy region to attack. Only regions **adjacent to the country's current territory** (including regions already conquered this war) are selectable; non-adjacent enemy regions are shown but locked.
5. The president **confirms**. There is **no Gold cost** to start a battle — the 30 Gold was paid at the war declaration.
6. The battle **goes live for everyone**: the country now holds initiative, the Round 1 clock starts, and the battle appears on the Battles page (§15.12) and as a map overlay for all players to fight in.

The active war is also surfaced on the War and Politics page (§45.9) for everyone's visibility, but the **Start Battle action itself lives only on the Country page**.

## 17.4 Sequential battles only

Only one active battle at a time in any given war.

## 17.5 Cumulative conquest

As regions are conquered, the attacker's territory expands. The next battle can be on any region of the opponent now adjacent to the attacker's expanded territory.

## 17.6 Ending a war

A war ends when either:

1. **Mutual cease-fire.** Either country's congress passes a "Sign Peace" law. If passed, the other country has 7 days to reciprocate by passing its own peace law. If both pass, the war ends. If 7 days pass without reciprocation, the offer expires and the war continues.
2. **Total conquest.** One country loses all its regions. The war auto-ends; the conquered country enters "occupied" status (§17.7).

## 17.7 Occupied country status

If a country loses all its regions: the country still exists in the database — its citizens remain citizens of it; it has no government, congress, president, or operating parties until at least one region is liberated. Citizens of an occupied country **can** still: log in, train, work (if employed elsewhere), fight, message, post on Pulse, chat, trade, travel. They **cannot**: vote, run for office, propose laws, sign MPPs, or declare war on behalf of their country. Liberation happens through resistance wars (§18).

## 17.8 No civil wars

Civil wars do not exist in this game.

## 17.9 Click flows — declaring war and signing peace

Starting individual battles is fully specified in §17.3 (president-only, Country page → War Operations). The war-level actions around it are **laws** (full law-proposal click path in §23):

**Declaring war (president only).** The **president** opens **Country page** → **Congress & Legislation** → **Propose Law** → **'Declare War'** — this law type is greyed out for non-presidents (only the president may propose it, and it is never delegatable). The form requires a **bordering, non-grace-period** target country; selecting an ineligible target disables **Propose** with the reason. On **Propose**, **30 Gold** is escrowed from the treasury and a **24-hour** congress vote opens (simple majority). If it passes, the 30 Gold is consumed and the war becomes active — it now appears on **War and Politics** and the president can use **War Operations** → **Start Battle** (§17.3); if it fails, the 30 Gold returns.

**Offering / signing peace.** Any congress member proposes '**Sign Peace**' the same way → 24-hour vote. On passage the cease-fire offer goes to the enemy, who has **7 days** to pass their own Sign Peace law; if both pass, the war ends; if the 7 days lapse, the offer expires and the war continues (§17.6).

**Where everyone watches the war.** The active war, current battle, initiative holder, and region map are surfaced on the **War and Politics page** (§45.9) and the **Map** for all players; only the **Start Battle** control itself lives on the Country page (§17.3).

---

## 18. Resistance Wars

---

### 18.1 Purpose

A resistance war (RW) is a special battle that allows the rightful owner country of an occupied region to attempt to liberate it.

### 18.2 Requirements to start an RW

A citizen can start an RW if: the targeted region is currently held by a foreign country; the citizen is a citizen of the **rightful owner** country; the citizen is at least **level 10**; the citizen is **physically present** in that region (travel rules — §14.3); and the citizen pays **20 Gold** out of pocket (consumed when the RW is created; admin-editable).

### 18.3 Cooldown

- **Congress members** of the rightful owner country: can start an RW immediately after the previous one ended.
- **Non-congress citizens**: must wait at least **15 minutes** after the most recent RW in their country ended.

### 18.4 Battle mechanics

The RW battle follows the same 15-round / 60-minute structure as regular battles (§15). Both sides can fight (same rules as §15.7).

### 18.5 Outcome

- **If the rightful owner wins**: the region returns to the rightful owner. The RW initiator receives **20 Gold + a Resistance Hero medal** (counted on profile, §40).
- **If the occupier wins**: no region change. The initiator's 20 Gold is forfeit.

### 18.6 Click flows — starting a resistance war

**Starting a resistance war.** To liberate an occupied region you must be a citizen of its **rightful owner**, **level 10+**, and **physically present** in that region (travel in via the occupier's country — §14.3). Standing in the region, open its **Region page** (§45.8); an eligible citizen sees a '**Start Resistance War**' button (for anyone ineligible it is greyed with the reason — wrong citizenship, under level 10, not present, or the **15-minute** post-RW cooldown for non-congress citizens, §18.3). Click it → a confirmation popup states the **20 Gold** out-of-pocket cost (consumed on start) → **Confirm**. If you hold 20 Gold it is deducted, the RW battle goes live immediately (15 rounds / 60 minutes each; both sides may fight — §18.4) and appears on the Battles page and Map; if you lack 20 Gold the Confirm button is disabled with a 'Buy Gold' hint.

**Outcome.** If the rightful owner wins, the region reverts and you (the initiator) receive **20 Gold + a Resistance Hero medal** (and +500 XP, §38). If the occupier wins, your 20 Gold is forfeit and the region stays occupied (§18.5). Congress members of the rightful owner may start a fresh RW immediately after the previous one ends; other citizens wait 15 minutes.

## 19. Military Ranks

### 19.1 Battle Points (BP)

Every citizen has **Battle Points (BP)** equal to their total cumulative damage dealt across all battles, lifetime. BP only grows — it never decreases.

### 19.2 The 20-tier rank ladder

A citizen's rank is determined by BP. Ranks advance automatically when BP crosses the threshold.

| Rank | Name               | BP threshold   | Damage bonus |
|------|--------------------|----------------|--------------|
| 1    | Recruit            | 0 (start)      | +1%          |
| 2    | Private            | 1,000          | +2%          |
| 3    | Corporal           | 10,000         | +3%          |
| 4    | Sergeant           | 50,000         | +4%          |
| 5    | Staff Sergeant     | 250,000        | +5%          |
| 6    | Master Sergeant    | 1,000,000      | +6%          |
| 7    | Sergeant Major     | 2,500,000      | +7%          |
| 8    | Second Lieutenant  | 5,000,000      | +8%          |
| 9    | First Lieutenant   | 10,000,000     | +9%          |
| 10   | Captain            | 25,000,000     | +10%         |
| 11   | Major              | 50,000,000     | +11%         |
| 12   | Lieutenant Colonel | 100,000,000    | +12%         |
| 13   | Colonel            | 200,000,000    | +13%         |
| 14   | Brigadier General  | 400,000,000    | +14%         |
| 15   | Major General      | 750,000,000    | +15%         |
| 16   | Lieutenant General | 1,500,000,000  | +16%         |
| 17   | General            | 3,000,000,000  | +17%         |
| 18   | Marshall           | 7,500,000,000  | +18%         |
| 19   | Supreme Marshall   | 15,000,000,000 | +19%         |
| 20   | Generalissimus     | 40,000,000,000 | +20%         |

All thresholds and bonus percentages are admin-editable.

### 19.3 What rank does

- Damage bonus added to the damage modifier total (§15.8).
- Profile flair: rank icon and name displayed.
- Mission gating: Mission 17 requires reaching Rank 3 (Corporal).
- Leaderboards: global and per-country by rank.
- Rank does not affect non-combat features.

### 19.4 Personal stat, separate from MU

Military rank is a personal stat, independent of MU membership.

### 19.5 Click flows — where rank appears

Military rank advances **automatically** the instant your lifetime **BP** crosses a threshold (§19.2) — there is no claim step. You see it on your **profile** → **Stats tab** (rank icon + name, current BP, and the next threshold), on the **Rankings** → **military rank** boards (global and per-country, §41.2), and as profile flair next to your name across the game. The rank's damage bonus is applied automatically inside the combat formula on every hit (§15.8). Reaching **Rank 3 (Corporal)** auto-completes Mission 17 (§37).

---

## 20. Military Units

### 20.1 What an MU is

A Military Unit (MU) is a player-organized combat club within a country. Citizens join voluntarily. MUs have a commander, members, a treasury, storage, a daily order, and (optionally) MU-owned companies.

### 20.2 MU level (4 tiers)

| MU Level          | Damage bonus | Cost to reach this level |
|-------------------|--------------|--------------------------|
| Novice (starting) | +5%          | (creation cost: 50 Gold) |
| Regular           | +10%         | 100 Gold upgrade         |
| Veteran           | +15%         | 250 Gold upgrade         |
| Elite             | +20%         | 500 Gold upgrade         |

All values admin-editable.

### 20.3 The MU damage bonus condition

The MU damage bonus applies to a member **only when they are fighting on the specific battle and side set as the MU's daily order**. If no daily order is set, no member gets the MU bonus that day.

### 20.4 MU member capacity

Starting capacity: 10 members (Novice). Maximum capacity: 25 (admin-editable). The commander expands capacity in groups of 5 by spending Gold:

| Tier    | +5 slots cost (Gold) |
|---------|----------------------|
| Novice  | 25                   |
| Regular | 50                   |
| Veteran | 75                   |
| Elite   | 100                  |

### 20.5 Joining an MU

Minimum level 6. The citizen applies via an application form (optional 200-character message). Applications wait for commander approval; if the MU is full, applications queue in a waiting list. When a slot opens, the oldest pending application moves to the commander's approval-pending list (the commander must manually accept). Applications expire after 7 days. A citizen can have only one pending application at a time.

## 20.6 Creating an MU

Minimum level **10**; creation cost **50 Gold**; the creator becomes the first commander; the MU starts at Novice with 10 slots. (No Society Builder medal — that medal has been removed; see §40.)

## 20.7 Leaving an MU

A citizen can leave at any time, instantly. After leaving, they cannot join another MU for **24 hours**.

## 20.8 Kicking members

Only the commander can kick a member. Kicked members are removed immediately and enter the 24h cooldown.

## 20.9 Commander succession

The creator is the first commander. The commander can voluntarily transfer leadership to any current member (one-way, immediate). If the commander goes **30 days without logging in**, the role temporarily auto-transfers to the longest-tenured member with a "Change Orders" privilege; the temporary commander has all powers except permanent leadership transfer. If the original logs in again, the role immediately reverts. If the temporary commander also goes inactive, the role cascades. No permanent transfer threshold; no voting out of commanders.

## 20.10 Granular privileges

The commander can grant any subset of these privileges to any current member. **Spending money is split from moving items** so a member can organize storage without spending power:

| Privilege           | What it allows                                                                  |
|---------------------|---------------------------------------------------------------------------------|
| Change Orders       | Set the MU's daily order                                                        |
| Manage Recruitment  | Accept/reject member applications                                               |
| Manage Storage      | Move/organize items within MU storage (NOT spend treasury)                      |
| Spend MU Funds      | Buy products/companies using MU treasury; make monetary trades                  |
| Sell MU Assets      | List MU goods/companies for sale                                                |
| Manage Companies    | Operate MU-owned companies (hire/fire, set salary, manage raw materials)        |
| Distribute Supplies | Configure and trigger supply distribution to members                            |
| Donate MU Funds     | Send MU money/items to citizens or countries                                    |
| Post as MU          | Publish Pulse posts under the MU's name from the MU page's Feed/Pulse tab (§30) |

The **commander always holds all privileges**. **Kick** and **Transfer Leadership** remain commander-only and are not grantable.

## 20.11 Daily order

The commander (or any member with "Change Orders") sets the MU's daily order: a specific battle ID + side. The order can be changed at any time, no cooldown.

## 20.12 MU storage & marketplace

The MU's storage is a multi-currency wallet plus a goods inventory (currency, food, weapons, tickets, raw materials), and it can own companies (§10.14). **MU storage is publicly visible to anyone.** All MU market and treasury actions (buying/selling goods, monetary trades, buying/selling companies, donating) are performed from the **MU page** by members holding the relevant privilege; goods listed are denominated in the MU's home country currency; proceeds go to the MU treasury.

## 20.13 Supply distribution

The commander (or a member with **Distribute Supplies**) configures a daily supply distribution, allocating a specific set of items to each member. **Timing:** auto-triggered daily at 00:00 GMT. **Eligibility:** a member must have fought on the MU's daily order **yesterday** to receive supplies today. **If storage runs out mid-distribution:** first-come-first-served by member tenure (oldest member first).

## 20.14 MU dissolution

No player-initiated disband. An MU cannot have 0 members. To exit, the commander must first **donate the MU to the country where it was created:** all treasury currency → country treasury; all storage goods → country inventory; all MU-owned companies → become government-owned. The MU dissolves; remaining members lose affiliation. Admins can manually trigger this donation for any MU.

## 20.15 MU page contents

The MU's public page displays: name, logo, home country, tagline; level and damage bonus %; commander (link); members list (links, tenure dates, privileges shown); member capacity (e.g., "8 / 10"); pending applications (visible to commander + members with Manage Recruitment); treasury balance (all currencies + Gold, public); storage inventory (all goods, public); MU-owned companies (links); daily order (current battle ID, side, set-by, timestamp); supply distribution schedule (detailed config to privileged members; basic version to all members); the **MU Market & Treasury** action section (privilege-gated); and a recent activity feed (donations received, orders changed, members joined/left).

**Feed / Pulse tab.** The MU page includes a "**Feed / Pulse**" tab — the MU's social feed (§30): its posts, reposts, and media, with a **Follow button and follower count**. Any citizen can follow the MU; the MU's posts then appear in the follower's Following feed, and a highly-followed MU can appear in Pulse Trending. The **commander posts as the MU** from this tab, and may grant the "**Post as MU**" privilege (§20.10) to other members. The grant is **permanent until the commander revokes it or the commander changes**.

## 20.16 Click flows — MUs end to end

Everything below happens on the **MU page** (your own via **My Places** → **My Military Unit**; any MU via search/links). MU funds and storage are used only here (§11.3).

**Creating an MU.** Requires **level 10**. From **My Military Unit** (when you're in none) click **Create Military Unit** → set name, optional logo (PNG/JPG ≤ 1 MB), home country, tagline; the dialog shows the **50 Gold** cost → **Confirm** → 50 Gold deducted, the MU is created at **Novice** (10 slots, +5%), you become **commander**, and its MU page opens. (No medal — Society Builder removed.)

**Joining an MU.** Requires **level 6**. On a target MU page click **Apply to Join** → optional 200-character message → **Submit**. Your application waits for **commander approval** (if the MU is full it queues by waiting-list order; when a slot frees, the oldest application surfaces to the commander). You may hold only **one** pending application at a time; applications expire after 7 days. On acceptance you're added, the MU page flips to the member view, and you're notified (§35).

**Approving applicants (commander / Manage Recruitment).** MU page → **Applications** panel (visible to the commander and members with **Manage Recruitment**) → each row shows applicant + message + **Accept** / **Reject**. Accept adds them if a slot is open.

**Leaving / being kicked.** Any member: MU page → **Leave MU** → confirm → removed instantly, then a **24-hour** cooldown before joining another MU. Commander only: on a member row, **Kick** → confirm → that member is removed immediately and enters the same 24h cooldown. (Kick and Transfer Leadership are commander-only and not grantable — §20.10.)

**Setting the daily order.** Commander or a member with **Change Orders**: MU page → **Daily Order** → **Set Order** → pick the target **battle** and **side** → **Confirm**. The order (battle ID, side, who set it, timestamp) is shown to all members; it can be changed any time, no cooldown. The MU damage bonus applies only to members fighting that exact battle/side (§20.3).

**Granting privileges (commander).** MU page → a member row → **Privileges** → toggle any subset of the nine privileges (Change Orders, Manage Recruitment, Manage Storage, Spend MU Funds, Sell MU Assets, Manage Companies, Distribute Supplies, Donate MU Funds, **Post as MU**) → **Save** → changes take effect immediately and show on the member's row. The commander always holds all privileges.

**Configuring supply distribution (commander / Distribute Supplies).** MU page → **Supply Distribution** → allocate a specific item set per member → **Save**. It auto-runs daily at **00:00 GMT**; only members who **fought the MU's daily order yesterday** receive supplies today; if storage runs dry mid-run, oldest members are served first (§20.13). The schedule shows on the page (detailed config to privileged members, a basic version to all).

**MU market & treasury actions.** MU page → **MU Market & Treasury** section (privilege-gated) → buy goods / sell goods (priced in the MU's home-country currency) / place monetary orders / buy or sell MU companies / donate MU money or items to citizens or countries. Each needs the matching privilege (Spend MU Funds, Sell MU Assets, Manage Companies, Donate MU Funds) and is written to the MU activity feed. MU storage and treasury are **public** to anyone viewing the page.

**Posting as the MU.** MU page → **Feed / Pulse** tab → **Post to Pulse** (visible to the commander and holders of **Post as MU**) → compose (280 chars, optional scope/links) → **Post** → it publishes under the MU's name into

followers' feeds. The 'Post as MU' grant is **permanent until the commander revokes it or the commander changes** (§30.11).

**Dissolving an MU.** There is no direct disband. The commander opens **My Military Unit** → **Donate MU to Country** → confirm: all treasury currency → country treasury, all storage goods → country inventory, all MU companies → government-owned; the MU dissolves and members lose affiliation (§20.14).

---

## 21. Political Parties

---

### 21.1 What a party is

A player-created political organization within a country.

### 21.2 Creating a party

Must be a citizen of the country. **Minimum level to create: 10** (admin-editable). Creation cost: **20 Gold**. The creator becomes the first **Party President (Party Leader)**. (No Society Builder medal — removed; see §40.)

### 21.3 Party properties

- Name — unique within the country, 3–40 characters, profanity filter.
- Description — 200 characters.
- Logo — optional image upload (PNG, JPG, max 1 MB).
- Platform statement — 1,000 characters.

All editable by the Party Leader.

### 21.4 Party Leader powers

The Party Leader can: kick members from the party (cannot kick active congress candidates during the candidacy window); edit name (7-day cooldown); edit description, platform, logo (no cooldown); and **assign the party's congress candidates to specific regional seats during the congress candidacy phase** (see §22). The Party Leader **cannot** override member votes and cannot prevent members from running for party leader.

### 21.5 Joining a party

**One party per citizen. Minimum level to join: 5** (admin-editable). Free; click "Join" on the party page. Free, instant leave.

### 21.6 Party-set join requirements

A party can set its own minimum level filter for joining (above the base level 5). Other filters are not supported.

### 21.7 Member tenure before running for congress

A citizen must be a member of their party for at least **7 days** before running for congress in that party.

### 21.8 Top-5 parties for congress eligibility

Only the **5 largest parties** (by member count, measured at the start of the congress candidate-assignment phase) can field congress candidates. Smaller parties exist but their members cannot run for congress.

## 21.9 Single-member parties

Allowed. The lone member is automatically Party Leader. Can field congress candidates if the party is top-5. If a party drops to 0 members, it auto-disbands.

## 21.10 Voluntary disband

The Party Leader can voluntarily disband via a confirmation dialog. All members lose affiliation. No refund of the 20 Gold creation cost.

## 21.11 Party page contents

Name, logo, home country; description and platform; Party Leader (link); member count and ranking (e.g., "42 members — currently 3rd-largest party in India"); members list (links, join dates); pending congress candidates (during candidacy window, with their assigned regional seats); current congress members from the party (links); election history (past 12 cycles — party leader winners, congress seats won); recent activity feed; and a "Join Party" button (if eligible).

**Feed / Pulse tab.** The Party page includes a "**Feed / Pulse**" tab — the party's social feed (§30): its posts, reposts, and media, with a **Follow button and follower count**. Any citizen can follow the party; its posts then appear in the follower's Following feed, and a highly-followed party can appear in Pulse Trending. The **Party Leader posts as the party** from this tab, and may grant a "**Post as Party**" power to other members. The grant is **permanent until the Party Leader revokes it or the leader changes**.

## 21.12 Click flows — parties end to end

Party actions live on the **Party page** (your own via **My Places** → **My Party**; any via search/links).

**Creating a party.** Requires **level 10** and citizenship of the country. From **My Party** (when you're in none) or the country's party index, click **Create Party** → set name (unique in-country, 3–40 chars, profanity-filtered), description (200), platform (1,000), optional logo ( $\leq 1$  MB); the dialog shows the **20 Gold** cost → **Confirm** → 20 Gold deducted, the party is created, you become **Party Leader**, and the Party page opens. (No medal — Society Builder removed.)

**Joining a party.** Requires **level 5** (plus any higher per-party minimum the party set — §21.6). On a party page click **Join** → instant (one party per citizen). To switch parties, leave first.

**Leaving.** Party page → **Leave Party** → instant, free. (Leaving auto-removes you from candidacy where applicable.)

**Party Leader powers.** From the Party page (leader-only controls): **Edit** name (7-day cooldown), and description/platform/logo (no cooldown), saved inline; **set the join minimum level**; **Kick** a member (cannot kick an active congress candidate during the candidacy window); and **assign congress candidates to regional seats** during the congress phase — the **My Party** → **Congress List** flow, fully described in §22.5. The leader cannot override member votes or stop members running for leader.

**Disbanding.** Party Leader → **Disband Party** → confirmation dialog (no refund of the 20 Gold) → all members lose affiliation. A party that drops to 0 members auto-disbands.

**Posting as the party.** Party page → **Feed / Pulse** tab → **Post to Pulse** (Party Leader and holders of the granted 'Post as Party' power) → compose → **Post**, publishing under the party's name. The grant is **permanent until the leader revokes it or the leader changes** (§30.11).

---

## 22. Elections

The election system is **parliamentary**: citizens elect congress directly, and the elected congress elects the president. The three elections run **in a fixed order across the month** — Party Leader, then Congress, then President — because each feeds the next.

### 22.1 The three elections, in order

1. **Party Leader election** — one winner per party. Only that party's members vote. The winner gains the power to assign the party's congress candidates to regional seats.
2. **Congress election** — 7 seats per country (one per region). All citizens vote. Per-region first-past-the-post.
3. **President election** — elected by the **7 seated congress members** (parliamentary). Candidates are eligible citizens who are **not** in congress.

### 22.2 The monthly calendar

| Election     | Candidacy                        | Special step                           | Vote                               | Results / takes office |
|--------------|----------------------------------|----------------------------------------|------------------------------------|------------------------|
| Party Leader | 2nd–4th                          | —                                      | 5th                                | 6th                    |
| Congress     | 9th–11th                         | Party Leader assigns seats on the 12th | 13th                               | 14th (congress seated) |
| President    | 21st–23rd (any eligible citizen) | —                                      | 24th (the 7 congress members vote) | 25th                   |

The order is enforced: Party Leader → Congress → President. The president vote is ~10 days after congress is seated (14th → 24th), so the people's congress choice directly shapes who becomes president. The cycle repeats every month.

### 22.3 Voter eligibility (all elections)

To vote a citizen must be: **Level 7 or higher**; a **citizen of the country for at least 30 consecutive days**; not currently banned; and meet the recent-activity requirement (active at least 7 of the last 14 days — anti-cheat, §43 AC-10). For the **Party Leader** election, the voter must additionally be a **member of that party**. **No one can vote for themselves** in any election.

### 22.4 ELECTION 1 — Party Leader (vote on the 5th)

**To run (candidacy, 2nd–4th):** A citizen goes to **My Party** (or Country → Elections → Party Leader tab), clicks "**Run for Party Leader**." Eligibility: must be a member of that party, **level** ≥ 7 (or the server's set threshold), pays the **2 Gold** candidacy fee (admin-editable). Confirmed → appears on that party's leader candidate list.

**To vote (the 5th, 24 hours):** Only members of that party can vote, and only in their own party's election. The voter goes to My Party (or Elections → Party Leader), sees the candidates, clicks one → "Vote" → confirm. Cannot vote for self. One vote, counts hidden.

**Results (the 6th):** Most votes wins (ties → earliest candidacy registration). If no candidates / no leader remains → the highest-XP party member auto-becomes Party Leader. Winner reward: **+100 XP + Party President medal**. The new leader now holds the power to assign the party's congress candidates on the 12th.

## 22.5 ELECTION 2 — Congress (vote on the 13th)

**The structure.** Each country has **7 congress seats = its 7 named regions** (one seat per region). Each seat is literally "the seat for [Region]." It is a **per-region first-past-the-post** contest (not D'Hondt, not flat plurality).

**To run (candidacy, 9th–11th):** An eligible citizen goes to Country → Elections → Congress (or My Party), clicks "**Run for Congress**." Eligibility: party member ≥ 7 days, citizen ≥ 30 days, level 7+, **not currently president**, and their party must be a **top-5 party**. Free to run. They join their party's pool of congress candidates.

**Party Leader assigns seats (the 12th):** Each top-5 party's Party Leader goes to **My Party → Congress List** and assigns **up to one member per seat** — choosing which member contests which region's seat. A member can be assigned to **any** region's seat regardless of where they physically live. A party may contest **any subset** of the 7 seats: if a leader assigns candidates to only 4 seats, that party appears in only those 4 seats.

**To vote (the 13th, 24 hours):** All eligible citizens vote on **all 7 seats**. For each of the 7 seats, the ballot shows that seat's candidates (the candidate each top-5 party assigned to that seat). The voter picks **one candidate per seat** (so up to 7 selections total), then confirms. Cannot vote for self. Counts hidden.

**Results (the 14th):** Each seat is won by the candidate with the **most votes for that specific seat**. A seat with one candidate → that candidate wins unopposed. A seat with **zero** candidates → the seat stays **empty** that term (congress simply has fewer members). Ties within a seat → earliest candidacy registration. Congress = the 7 seat-winners. Each winner: **+50 XP + Congress Member medal**, takes office on the 14th, and may propose and vote on laws for the term.

## 22.6 ELECTION 3 — President (vote on the 24th, by congress)

**To run (candidacy, 21st–23rd):** Any eligible citizen can run for president — **not** just congress members. Eligibility: party member ≥ 7 days, citizen ≥ 30 days, **level 10+**, and pays the **10 Gold** candidacy fee (admin-editable). The voter goes to Country → Elections → President, clicks "**Run for President**," and writes a campaign presentation (editable until voting starts). **Dual-office rule:** a sitting congress member **cannot** run for president, and the president cannot run for/sit in congress — so a presidential candidate is by definition someone who did not contest/win a congress seat this cycle. The "Run" button is disabled with a clear reason if the citizen holds the conflicting office.

**To campaign (21st–24th):** Candidates post on Pulse and may spend Gold to promote posts (\$30); a "Presidential Candidates" page lists all runners with their presentations.

**To vote (the 24th):** The **7 seated congress members** are the electorate. Each congress member casts one vote for one eligible presidential candidate. **Majority of 7 = 4 votes** to win. Cannot vote for self.

**Tie resolution:** if the 7-member congress vote ties, the candidate **whose party holds more congress seats** wins; if still tied, **earliest candidacy registration** wins.

**Results / office (the 25th):** Winner reward: **+500 XP + Country President medal**, takes office on the 25th. If no presidential candidates run, the **incumbent stays one more month**.

## 22.7 Tiebreakers (all races)

Candidate with the **earliest candidacy registration timestamp** wins ties (and for the president, after the party-seat-count tiebreaker above).

## 22.8 No candidates / no votes

- No Party Leader candidates → highest-XP party member auto-becomes Party Leader.
- A seat with no congress candidate → empty seat for the term.
- No presidential candidates → incumbent stays one more month.

## 22.9 Rewards for winning

| Office                     | Reward (per term won)             |
|----------------------------|-----------------------------------|
| Country President          | +500 XP + Country President medal |
| Congress Member (per seat) | +50 XP + Congress Member medal    |
| Party Leader               | +100 XP + Party President medal   |

## 22.10 Voting transparency

Vote counts are **hidden during voting**, revealed on the results day for each election.

---

## 23. Congress & Laws

---

### 23.1 What congress does

Congress is the elected legislative body of a country (7 members). Members propose and vote on laws, and elect the president.

### 23.2 Proposing a law

Any congress member can propose any law **except "Declare War"** (president only). When a law involves spending money or Gold, funds are escrowed from the country treasury at proposal. If the law fails, funds return; if it passes, funds are consumed.

### 23.3 Voting on a law

One vote per member per law (yes / no / abstain). **24-hour voting window**. Simple majority of yes-votes among voters wins (abstentions don't count). **Supermajority (66.6%)** required for: "Declare Natural Enemy" and "Join Coalition."

## 23.4 Complete law list

| Law                      | Proposer                      | Threshold       | Effect                                             |
|--------------------------|-------------------------------|-----------------|----------------------------------------------------|
| Declare War              | President only                | Simple majority | Initiates war. 30 Gold escrowed.                   |
| Sign Peace               | Any congress member           | Simple majority | Offers cease-fire (reciprocity within 7 days).     |
| Sign MPP                 | Any congress member           | Simple majority | Proposes MPP. 40 Gold escrowed.                    |
| Cancel MPP               | Any congress member           | Simple majority | Cancels active MPP. 7-day grace.                   |
| Renew MPP                | Any congress member           | Simple majority | Toggles auto-renewal. 40 Gold escrowed at renewal. |
| Join Coalition           | Any congress member           | Supermajority   | Joins a coalition. 50 Gold escrowed.               |
| Leave Coalition          | Any congress member           | Simple majority | Leaves current coalition.                          |
| Disband Coalition        | Coalition leader country only | Simple majority | Dissolves coalition.                               |
| Issue Currency           | Any congress member           | Simple majority | Mints local currency. 1 Gold per 1,000 escrowed.   |
| Change VAT               | Any congress member           | Simple majority | Adjust VAT rate.                                   |
| Change Import Tax        | Any congress member           | Simple majority | Adjust Import Tax rate.                            |
| Change Export Tax        | Any congress member           | Simple majority | Adjust Export Tax rate.                            |
| Change Work Tax          | Any congress member           | Simple majority | Adjust Work Tax rate.                              |
| Change Citizenship Fee   | Any congress member           | Simple majority | Adjust Gold cost for citizenship.                  |
| Donate to Military Unit  | Any congress member           | Simple majority | Sends treasury currency/goods to an MU.            |
| Authorize Spending       | Any congress member           | Simple majority | Allocates budget for market actions.               |
| Authorize Distribution   | Any congress member           | Simple majority | Authorizes president to distribute treasury goods. |
| Found Government Company |                               |                 | Creates a government company.                      |

| Law                                      | Proposer            | Threshold       | Effect                                                       |
|------------------------------------------|---------------------|-----------------|--------------------------------------------------------------|
|                                          | Any congress member | Simple majority |                                                              |
| Authorize Government Company Operations  | Any congress member | Simple majority | Allocates operational budget for a government company.       |
| Authorize Government Company Acquisition | Any congress member | Simple majority | Authorizes buying a private company from Companies for Sale. |
| Sell Government Company                  | Any congress member | Simple majority | Privatizes (lists on Companies for Sale).                    |
| Rename Region                            | Any congress member | Simple majority | Renames a region.                                            |
| Move Capital                             | Any congress member | Simple majority | Changes the country's capital region.                        |
| Impeach President                        | Any congress member | Simple majority | Removes the sitting president from office.                   |
| Impeach Congress Member                  | Any congress member | Simple majority | Removes a specific congress member.                          |
| Freeze Treasury Spending                 | Any congress member | Simple majority | Halts presidential market actions until lifted.              |
| Declare Natural Enemy                    | Any congress member | Supermajority   | Declares Natural Enemy. 20 Gold escrowed.                    |
| Remove Natural Enemy                     | Any congress member | Simple majority | Removes the current Natural Enemy.                           |

## 23.5 What is NOT in the law list

These laws explicitly do not exist: Build Hospital; Build Defense System; Start Civil War; Donate to Region; Set Minimum Wage; Revoke Citizenship.

## 23.6 Escrow mechanism

For any law with a Gold/currency cost, that amount is locked from the country treasury at proposal. While voting, the funds cannot be used by other laws. If the law passes: consumed. If it fails: returned. If withdrawn before any votes are cast: returned.

## 23.7 Country action log

Every congressional and presidential action is recorded in a **public country action log** on the country page. Each entry shows: timestamp (GMT); actor (username + link); action type (e.g., "Law Proposed," "Law Passed," "Marketplace Purchase," "Distribution Authorized," "Company Acquired"); action details (full specifics); and

related entities (links to the law record, affected MU/region/company). **Delegated actions** are attributed to the acting congress member and noted as delegated (§24). Filtering by date range, action type, actor; keyword search across details; all entries permanent.

## 23.8 Click flows — proposing and voting on a law

Legislation lives in the **Congress & Legislation** panel on the **Country page** — visible to everyone (so all citizens can watch proposed and active laws), with **Propose** and **Vote** controls enabled only for sitting congress members (and 'Declare War' only for the president).

**Proposing a law (congress member).** Country page → **Congress & Legislation** → **Propose Law** → a **law-type picker** lists every law in §23.4 (each row notes its threshold). Pick a law → a **parameters form** tailored to that law opens — e.g., 'Change VAT' → new rate; 'Sign MPP' → target country; 'Issue Currency' → amount, with the live Gold cost; 'Found Government Company' → type/quality/region/budget; 'Rename Region' → region + new name; 'Authorize Spending' → budget amount; 'Impeach President' → confirm target. If the law carries a Gold/currency cost, the form shows it and notes it will be **escrowed**. Click **Propose** → any cost is escrowed from the treasury, the law enters the active list with a **24-hour** countdown, and a notification goes to congress. Invalid parameters (e.g., a non-bordering MPP/war target) disable **Propose** with the reason. The proposer may **Withdraw** before any vote is cast (escrow returns).

**Voting on a law (congress member).** Country page → **Congress & Legislation** → **Active Laws** → open a law to see its full parameters, the proposer, and the live countdown (the running tally stays hidden) → click **Yes**, **No**, or **Abstain** → **Confirm** (one vote per member; counts hidden during the window). At the 24-hour close the system tallies: **simple majority** of cast Yes/No wins for most laws; **supermajority (66.6%)** for 'Declare Natural Enemy' and 'Join Coalition'; abstentions don't count. **Pass** → the effect applies and any escrow is consumed; **fail** → escrow returns. Both outcomes are written to the public action log and the proposer is notified (§35).

**Reading the country action log.** Country page → **Country Action Log** (the dashboard preview links here). Every congressional/presidential action is listed with timestamp (GMT), actor (link), action type, full details, and related-entity links; **delegated** actions are tagged as delegated with the acting member named (§24). Filter by date range, action type, or actor, keyword-search the details; entries are permanent (§23.7).

---

## 24. The President

### 24.1 What the president does

The president is the executive of a country. They:

- Propose the "**Declare War**" law (only they can propose it; it is never delegatable).
- Execute country marketplace actions **within congress-authorized budgets**, from the Country page's Treasury Market & Operations section: buy/sell goods on the Product Market; buy companies (within an "Authorize Government Company Acquisition" budget); sell government companies (per "Sell Government Company" law); trade on the Monetary Market; fire workers at government companies (administrative, no budget needed).
- Distribute treasury goods to citizens (within an "Authorize Distribution" budget).
- Approve or reject citizenship applications.
- Manage government-owned companies (salaries, job offers, raw material supply).
- Post as the country on Pulse (§30.11), and grant a "Post as Country" power to other citizens (this grant auto-voids when the president's term ends; it is separate from the economic delegation in §24.2).
- Start battles in an active war (president-only, not delegatable — see §17.3).

### 24.2 Presidential delegation

The president may delegate specific operational powers to specific **congress members** via a "Delegate Powers" panel on the country page. Each permission is granted individually to a named congress member.

**Delegatable permissions:**

| Permission                  | What the delegated congress member can do                              |
|-----------------------------|------------------------------------------------------------------------|
| Execute Market Purchases    | Buy products for the country (within congress-authorized budget)       |
| Execute Market Sales        | Sell country goods on the market                                       |
| Execute Monetary Trades     | Trade currencies in the treasury                                       |
| Manage Government Companies | Hire/fire, set salaries, manage raw materials for government companies |
| Execute Distributions       | Distribute treasury goods to citizens (within authorized budget)       |
| Buy/Sell Companies          | Acquire or privatize companies (within authorized budget/law)          |

**Delegation rules:**

- "**Propose Declare War**" is **NEVER delegatable** — it stays president-only.
- **Maximum 3 delegated congress members** at a time.
- **No sub-delegation** — only the president delegates; no chains.
- Delegated powers are shown publicly on the congress member's profile ("Currently holds delegated powers: [X], granted by President [name]").

- All delegated actions are logged in the public country action log, attributed to the acting member and noted as delegated.
- Delegation **does not bypass congress** — congress must still pass the budget laws ("Authorize Spending," etc.). Delegation only governs *who clicks the button* within an already-approved budget.
- The president can **revoke** any delegation instantly at any time.
- Delegations **auto-void** when the president's term ends, the congress member's term ends, or the president is impeached/resigns.

## 24.3 What the president cannot do alone

Set tax rates (congress law); issue currency (congress law); declare war (proposes only — congress votes); sign MPPs or join coalitions (congress law); sell or found government companies (congress law).

## 24.4 Full transparency

All presidential actions are logged publicly in the country action log (§23.7).

## 24.5 Removing a president

Impeached by congress (law); prevented from acting without removal via "Freeze Treasury Spending"; a sitting president cannot change country mid-term (must resign first).

## 24.6 Click flows — the president's executive actions

The president's **executive** actions (distinct from proposing laws) live in dedicated **Country page** sections, visible/usable only by the president (or, where noted, a delegate).

**Delegating powers.** Country page → **Delegate Powers** panel (president-only) → pick a **congress member** → toggle any of the delegatable permissions (Execute Market Purchases, Execute Market Sales, Execute Monetary Trades, Manage Government Companies, Execute Distributions, Buy/Sell Companies — §24.2) → **Grant**. The grant shows publicly on that member's profile and is logged. **Revoke** is one click and instant. 'Propose Declare War' and 'Start Battle' are **never** in this list. Maximum 3 delegates, no sub-delegation; grants auto-void on term-end, impeachment, or resignation.

**Treasury market & operations.** Country page → **Treasury Market & Operations** section (president or a delegate with the matching permission) → buy/sell goods, place monetary orders, buy companies, sell government companies — all **within a congress-authorized budget** (the relevant 'Authorize ...' law must have passed). Funds come from the treasury; bought goods go to country inventory; every action is logged publicly (§11.10, §23.7). Without an authorizing budget the action buttons are disabled with a 'requires congress authorization' note.

**Managing a government company.** Same section → **Government Companies** → open one → hire/fire, set salaries (paid from the treasury in the country's own currency), and manage raw-material supply, within the 'Authorize Government Company Operations' budget. Firing is administrative (no budget needed).

**Distributing treasury goods.** Country page → **Treasury Market & Operations** → **Distribute Goods** (within an 'Authorize Distribution' budget) → select recipients and the item set → **Distribute** → goods leave the country inventory; logged.

**Approving citizenship.** Country page → **Citizenship Applications** panel (president, or a delegate if granted) → each pending applicant shows their name, application date, and the held Gold fee → **Approve** (the applicant becomes a citizen; the fee goes to the treasury) or **Reject** (the fee goes to the treasury as a processing fee — \$25.2). Applications left undecided for 7 days auto-resolve to the treasury. The applicant is notified either way.

**Posting as the country.** Country page → **Feed / Pulse** tab → **Post to Pulse** (president, or a citizen granted 'Post as Country') → compose → **Post** under the country's name. This grant **auto-voids when the president's term ends** (and on impeachment/resignation) and is separate from economic delegation (§30.11).

**Declaring war / starting battles.** Declaring war = the president proposing the 'Declare War' law (§17.1, §23 flow). Starting each battle = **War Operations** → **Start Battle** (§17.3). Both are president-only and never delegatable.

---

## 25. Citizenship & Country Switching

---

### 25.1 Applying for citizenship in another country

Visit the target country's page, click "**Apply for Citizenship.**" Pay the **Citizenship Fee** in Gold (default 5 Gold, set by the target country's congress). The application sits pending for up to 7 days. The target country's president approves or rejects.

### 25.2 Refund handling

| Outcome                                         | Gold                                             |
|-------------------------------------------------|--------------------------------------------------|
| Approved by target president                    | Goes to target country treasury                  |
| Rejected by target president                    | Goes to target country treasury (processing fee) |
| Expires after 7 days, no decision               | Goes to target country treasury                  |
| Withdrawn by applicant within 24h of submission | Refunded to applicant                            |
| Withdrawn by applicant after 24h                | Goes to target country treasury                  |

### 25.3 Sitting president restriction

A citizen who is the sitting president of a country cannot apply for citizenship in another country. They must resign first, or wait until the term ends.

## 25.4 What happens to assets and ties on citizenship change

| Asset / tie                                                          | Effect                                                                            |
|----------------------------------------------------------------------|-----------------------------------------------------------------------------------|
| Personal stats (HP, strength, work skill level, rank, XP, level, BP) | Travel with citizen                                                               |
| Inventory (items + currencies + raw materials)                       | Travel with citizen                                                               |
| Medals on profile                                                    | Retained                                                                          |
| Login streak                                                         | Retained                                                                          |
| Followers / following (Pulse)                                        | Retained                                                                          |
| Job at old country company                                           | Auto-fired. Must find new employment.                                             |
| Owned companies                                                      | Keep ownership remotely.                                                          |
| Military Unit membership                                             | Retained.                                                                         |
| Political party membership                                           | Auto-removed. Parties are country-bound.                                          |
| Sitting congress seat                                                | Vacated immediately; the region's seat is filled by the runner-up, or sits empty. |
| Sitting presidency                                                   | Cannot switch — must resign first.                                                |
| Pending Product Market listings                                      | Cancelled. Items return to inventory.                                             |
| Pending Companies for Sale listings                                  | Cancelled. Companies remain owned by citizen.                                     |
| Pending Monetary Market orders                                       | Cancelled. Escrowed currency returns.                                             |
| Friendships                                                          | Retained.                                                                         |
| Newspaper                                                            | Retained.                                                                         |
| Voting rights in new country                                         | 30-day wait re-applies.                                                           |

## 25.5 Citizen of an occupied country

Remains a citizen of the occupied country; can play, fight, work elsewhere, message, post on Pulse, chat, trade, travel; cannot vote, run for office, propose laws, sign MPPs, or declare war on behalf of the country; can still apply for citizenship elsewhere (no restriction).

## 25.6 Ghost citizens

If a citizen goes inactive (no logins for an extended period), their citizenship is **not** automatically revoked — they remain a citizen indefinitely. Anti-cheat flagging may flag long-term inactive accounts for moderator review, but no auto-strip occurs.

## 25.7 Click flows — applying for and changing citizenship

**Applying for citizenship elsewhere.** Open the **target country's Country page** → **Apply for Citizenship** → a confirmation popup shows the **Citizenship Fee** in Gold (default 5, set by that country's congress) and your Gold balance → **Confirm**. If you hold the fee it is deducted and held while the application is **pending (up to 7 days)** for the target president's decision (§24, 'Approving citizenship'); if you lack it, Confirm is disabled with a 'Buy Gold' hint. A sitting **president cannot apply** elsewhere — the button is disabled with 'resign first' (§25.3).

**Withdrawing an application.** While pending, open the same country page (or your notifications) → **Withdraw Application** → confirm. **Within 24h** of submission the fee is **refunded**; **after 24h** it goes to the target treasury (§25.2).

**On approval (what changes).** Your citizenship flips to the new country and the asset/tie effects in §25.4 apply automatically — job auto-fired, party membership removed, any congress seat vacated, pending listings/orders cancelled with escrows returned — while stats, inventory, medals, streak, followers, MU, friendships, and newspaper carry over; the 30-day voting wait restarts. You're notified (§35).

---

## 26. Mutual Protection Pacts (MPPs)

---

### 26.1 What an MPP is

A bilateral defense agreement between two countries. An active MPP grants citizens of both countries a **+10% damage bonus** when fighting on the side of the MPP partner in any battle.

### 26.2 Signing an MPP

Mutual signing is required — both countries' congresses must pass the "Sign MPP" law within 7 days of each other:

1. Country A's congress proposes "Sign MPP with Country B." **40 Gold** escrowed from A.
2. Congress votes (24 hours).
3. If passed, the proposal sits as "pending reciprocation" — Country B has 7 days to pass its own "Sign MPP with Country A" law (B pays its own 40 Gold).
4. If B reciprocates within 7 days: the MPP activates; both 40 Gold are consumed.
5. If B does not reciprocate: A's 40 Gold is refunded.

Each country pays its own 40 Gold (total per MPP signing = 80 Gold across both).

### 26.3 Duration

**60 days** from activation.

### 26.4 Auto-renewal

Either country's congress can toggle auto-renewal on/off (via "Renew MPP"). When on, 40 Gold is auto-deducted from that country's treasury at expiry, extending the MPP another 60 days. **Insufficient Gold at auto-renewal:** the MPP auto-cancels with notification to both countries' congresses and presidents.

### 26.5 Pre-expiry notification

24 hours before expiry, a notification is sent to both countries' congress members and presidents.

### 26.6 Early cancellation

Either side's congress passes "Cancel MPP." Cancellation includes a **7-day grace period** during which the +10% bonus still applies. After the grace, the MPP ends. No refund.

### 26.7 Compatibility

Multiple MPPs simultaneously are allowed. Compatible with coalitions and Natural Enemy designations (a country can even have an MPP with its Natural Enemy).

## 26.8 Click flows — signing, renewing, and cancelling an MPP

An MPP's status is **read on two public pages** and **acted on through congress laws** (the generic law mechanics — propose, 24h vote, escrow, pass/fail — are in §23; this flow shows the MPP-specific paths, fields, and numbers).

**Where you see MPPs.** Country page → **Diplomatic Status** section lists this country's active MPPs (partner flag, activation date, days remaining, auto-renew on/off). The global view is **Country menu** → **War and Politics** (§45.9), whose **Active MPPs** table is filterable by country and links each partner.

**Signing an MPP (congress member).** Country page → **Congress & Legislation** → **Propose Law** → **"Sign MPP"** → the parameters form asks for the **target country** (border is *not* required for an MPP) and shows the **40 Gold** that will be escrowed from the treasury. Click **Propose** → 40 Gold is escrowed and the proposal enters the 24-hour congress vote. On **pass**, the law becomes a standing **"pending reciprocation"** offer and the partner country has **7 days** to pass its own "Sign MPP with [you]" law (each side pays its own 40 Gold). When the partner reciprocates inside 7 days, the MPP **activates**, both 40 Gold are consumed, and the +10% partner-side bonus (§26.1) goes live for citizens of both countries. If the 7 days lapse with no reciprocation, your 40 Gold is **refunded** automatically. A vote **fail** also refunds the escrow.

**Auto-renewal toggle (congress member).** Country page → **Diplomatic Status** → **[the MPP]** → **"Renew MPP"** flips auto-renew on/off (passed as a congress law). With it **on**, 40 Gold is auto-deducted from the treasury at the 60-day expiry and the MPP extends another 60 days; if the treasury lacks 40 Gold at that moment the MPP **auto-cancels** and both countries' congress members and presidents are notified (§35). A **24-hour pre-expiry** notification fires to the same recipients regardless of the toggle.

**Early cancellation (congress member).** Country page → **Congress & Legislation** → **Propose Law** → **"Cancel MPP"** → pick the active MPP → **Propose** → 24h vote. On pass, a **7-day grace** begins during which the +10% bonus still applies; after the grace the MPP ends. **No refund.** Either partner's congress can cancel independently.

---

## 27. Coalitions

---

### 27.1 What a coalition is

A multilateral alliance between up to **12 countries**. Citizens of coalition member countries receive a damage bonus of **+1% per member country** (max +12%) when fighting on a coalition daily order.

### 27.2 Creating a coalition

The country president proposes a "Create Coalition" law in their own congress. Founder cost: **100 Gold** escrowed. Congress votes (24h, simple majority). If passed: the coalition is created; 100 Gold → World Bank; the founding country's current president becomes the initial coalition leader.

### 27.3 Joining a coalition

The coalition leader sends an invitation to a target country. The target president proposes a "Join Coalition" law. **50 Gold** escrowed. Congress votes (24h, **supermajority 66.6%** required). If passed: the country joins; 50 Gold → World Bank.

### 27.4 Maximum size

**12 member countries** max (admin-editable). No new invitations sent when at cap.

### 27.5 One coalition per country

One coalition at a time. Joining a second requires leaving the first.

### 27.6 Leaving a coalition

Any member's congress passes "Leave Coalition" (simple majority, no cost). The country immediately leaves. No Gold refund. If the leader country leaves, leadership auto-passes to the next-longest-tenured member.

### 27.7 Leadership

The founder country's current president is the initial leader. Coalition members can call a "Change Coalition Leader" vote at any time; all members vote; most votes wins; ties → incumbent; **7-day cooldown** between leader-change votes. If the leader country's president changes (election/impeachment), leadership stays with the country.

### 27.8 Coalition privileges

The coalition leader can grant privileges to other member countries:

| Privilege      | What it allows                  |
|----------------|---------------------------------|
| Change Orders  | Set the coalition's daily order |
| Manage Members | Invite countries to join        |

## 27.9 Daily orders

The coalition has a daily order — a specific battle and side. Only the leader (or members with "Change Orders") can set it. Order can change any time, no cooldown. The bonus applies only when fighting the ordered battle.

## 27.10 Combat bonus

+1% damage per member country, capped at +12%. Stacks additively with MPP, Natural Enemy, and Military Rank modifiers (§15.8). **MU and Coalition bonuses do not stack on the same hit — the MU order takes precedence.**

## 27.11 No coalition treasury

No shared treasury. Members keep their own treasuries.

## 27.12 Disbanding

The leader country's congress passes "Disband Coalition" (simple majority). Auto-disbands at 1 or fewer members.

## 27.13 Click flows — coalitions end to end

Coalition membership is decided by **congress laws** (escrow + 24h vote, §23); day-to-day **operational control** lives on a **Coalition panel** reached from **Country menu** → **War and Politics** → **Coalitions** (the same page that lists active coalitions, §45.9). Operational controls render only for the citizen holding the relevant privilege; everyone else sees the panel read-only.

**Creating a coalition (president).** Country page → **Congress & Legislation** → **Propose Law** → **"Create Coalition"** → name the coalition → **Propose** (founder cost **100 Gold** escrowed) → 24h congress vote, simple majority. On pass, the coalition is created, **100 Gold** → **World Bank**, and the founding country's **current president becomes the initial coalition leader**. The new Coalition panel now appears under War and Politics.

**Joining a coalition.** The flow starts with the **leader** (or a member holding **Manage Members**): War and Politics → **Coalition panel** → **"Invite Country"** → pick the target country → send. The target's president then goes to Country page → **Congress & Legislation** → **Propose Law** → **"Join Coalition"** → **Propose** (**50 Gold** escrowed) → 24h vote requiring a **66.6% supermajority**. On pass, the country joins and **50 Gold** → **World Bank**. No invitations can be sent while the coalition is at its **12-country** cap.

**Setting the daily order (leader or "Change Orders").** War and Politics → **Coalition panel** → **"Set Daily Order"** → choose the battle and the side → **Confirm**. The order changes immediately with **no cooldown**; the

**+1% per member country** (max **+12%**) bonus applies only to citizens fighting that ordered battle. (Per §27.10, the **MU order takes precedence — MU and Coalition bonuses do not stack on the same hit.**)

**Granting privileges (leader).** War and Politics → **Coalition panel** → **Members** → **[a member country]** → **Grant Privilege** → toggle **Change Orders** and/or **Manage Members** → **Save**. Privileges are revocable the same way.

**Changing the leader (any member).** Coalition panel → **"Call Leader Vote"** → all member countries vote → most votes wins, **ties keep the incumbent**, and a **7-day cooldown** blocks another leader vote. If the leader country's own president changes by election or impeachment, leadership **stays with the country**.

**Leaving (member congress).** Country page → **Congress & Legislation** → **Propose Law** → **"Leave Coalition"** → **Propose** → 24h vote, simple majority, **no cost, no refund**. The country leaves immediately on pass; if the **leader** country leaves, leadership auto-passes to the **next-longest-tenured** member.

**Disbanding (leader country congress).** Country page → **Congress & Legislation** → **Propose Law** → **"Disband Coalition"** → **Propose** → 24h vote, simple majority. The coalition also **auto-disbands at 1 or fewer members**. There is **no coalition treasury** to settle — each country keeps its own.

---

## 28. Natural Enemy

---

### 28.1 What Natural Enemy is

A country designates one other country as its Natural Enemy at any given time. Citizens fighting in **direct wars between the two** receive a **+10% damage bonus** against the Natural Enemy.

### 28.2 Declaring a Natural Enemy

Congress proposes "Declare Natural Enemy" specifying the target. Required: the target shares a border at proposal **and** at passage; the target is not within its 30-day post-unlock grace period; **20 Gold** escrowed. Congress votes (24h, **supermajority 66.6%**). If it passes: 20 Gold consumed (→ World Bank), Natural Enemy active. If it fails: refunded.

### 28.3 Not mutual

Declaration does not cause the reverse. Each country declares independently.

### 28.4 One at a time

One Natural Enemy at a time. To change, the current one must be removed first.

### 28.5 Multiple countries can target the same enemy

A single country can be the Natural Enemy of multiple other countries simultaneously.

### 28.6 Removal / change

"Remove Natural Enemy" (simple majority, no cost) ends the designation. Declaring a different Natural Enemy requires **7 days** since the current one became active.

### 28.7 MPP compatibility

A country can have an MPP with its Natural Enemy.

### 28.8 Bonus scope

The +10% applies **only in direct wars** between the declaring country and its Natural Enemy — not in third-party conflicts where you're fighting alongside others.

### 28.9 Click flows — declaring and removing a Natural Enemy

Like MPPs, a Natural Enemy is **set through congress laws** (§23) and **read** on the Country page's **Diplomatic Status** section and on **War and Politics** (§45.9).

**Declaring (congress member).** Country page → **Congress & Legislation** → **Propose Law** → **"Declare Natural Enemy"** → the parameters form requires a **target that shares a border** (checked both at proposal and again at passage) and that is **not inside its 30-day post-unlock grace**; it shows the **20 Gold** to be escrowed. If the target fails the border or grace check, **Propose** is disabled with the reason. Click **Propose** → 20 Gold escrowed → 24h congress vote requiring a **66.6% supermajority**. On **pass**, 20 Gold is consumed (→ **World Bank**) and the Natural Enemy is active, giving the **+10% bonus only in direct wars** between the two countries (§28.8). On **fail**, the escrow refunds. Declaration is **not mutual** — the other country is unaffected unless it declares back.

**One at a time.** With a Natural Enemy already active, the "Declare Natural Enemy" law is **blocked** until the current one is removed; the picker explains why.

**Removing / changing (congress member).** Country page → **Congress & Legislation** → **Propose Law** → **"Remove Natural Enemy"** → **Propose** → 24h vote, **simple majority, no cost**. After removal, declaring a **different** Natural Enemy is gated until **7 days** have passed since the current one became active. A country may still hold an **MPP with its Natural Enemy** (§28.7); both statuses display side by side under Diplomatic Status.

---

## 29. Newspapers

---

### 29.1 One newspaper per citizen

Every citizen can own exactly one newspaper. Newspapers are not transferable.

### 29.2 Creating a newspaper

Minimum level **4** (admin-editable). Creation cost **2 Gold** (admin-editable). Set a name (3–40 chars, profanity filter) and an optional description.

### 29.3 Renaming

30-day cooldown between renames.

### 29.4 Article writing — the editor

The editor page provides: a title field (3–100 characters); a body editor with a formatting toolbar (bold, italic, headings H2/H3, bulleted lists, numbered lists, blockquotes, inline links); a **50,000-character** body maximum; a **Preview** button; a **Save as Draft** button (saves without publishing; drafts persist indefinitely); and a **Publish** button (publishes immediately).

### 29.5 Drafts

Citizens can save unpublished drafts (stored under a "Drafts" tab on their newspaper page), edit, delete, or publish them at any time. **No scheduled publishing in v1** — drafts must be manually published.

### 29.6 Article voting

Citizens can react with **Like** or **Dislike**. Likes count toward writer XP (up to **100 likes/article** counted, +1 XP per like). Dislikes are informational only.

### 29.7 Comments

Max 500 characters per comment. The owner can delete comments on their own articles. Comments can be reported (§36).

### 29.8 Subscriptions

Citizens can subscribe to any newspaper (no cap), free. New articles from subscribed newspapers appear in a personalized news feed, and a notification is sent on each new article (§35).

## 29.9 Reporting and moderation

Articles and comments can be reported (§36). Moderators can delete violating content; the owner is notified if content is removed.

## 29.10 Article lifecycle

Articles are permanent. Only the last 30 days appear in active feeds; older articles live on an always-accessible archive page.

## 29.11 Newspaper analytics

The owner sees: total articles published; total subscriber count; total likes across all articles; recent comment activity; and per-article views, likes, dislikes, comments.

## 29.12 Deleting and re-creating

The owner can delete the newspaper at any time, free. 30-day cooldown before re-creating; re-creation costs 2 Gold again. Articles from a deleted newspaper are archived with the author shown as "[deleted newspaper]."

## 29.13 Newspaper themes

Custom newspaper themes (cosmetic styling) are available to **all** citizens free (formerly Premium-only; Premium removed — §42). A default theme is used otherwise.

## 29.14 Click flows — newspaper, editor, and reading

A citizen manages their own paper under **My Places** → **My Newspaper**; readers reach papers through **Country menu** → **Newspaper Index** and the **dashboard news feed** (subscribed papers).

**Creating (owner).** My Places → **My Newspaper** → with no paper yet the page shows "**Create Newspaper**" → a form takes a **name (3–40 chars, profanity-filtered)** and optional description, and shows the **2 Gold** cost. Eligibility: **level ≥ 4**. Below level 4 the button is disabled with the level note. **Confirm** → 2 Gold is spent and the paper exists. **Renaming** is the "**Rename**" action on the same page, gated by a **30-day cooldown**.

**Writing — the editor (owner).** My Newspaper → "**Write Article**" opens the editor: a **title field (3–100 chars)**; a body editor with a formatting toolbar (**bold, italic, H2/H3, bulleted/numbered lists, blockquotes, inline links**) and a **50,000-character** maximum; a **Preview** button; **Save as Draft** (stores under the **Drafts** subtab indefinitely — no scheduled publishing in v1); and **Publish** (goes live immediately). Drafts opened from **My Newspaper** → **Drafts** can be edited, deleted, or published at any time.

**Reading, liking, commenting (any citizen).** Open a paper from the **Newspaper Index**, the news feed, a search result (§46), or a Pulse rich link card (§30) → click an article → read → react with **Like** or **Dislike** (likes feed the writer's XP, capped at **+100 per article** at +1 XP each; dislikes are informational) → scroll to **comments**, type up to **500 chars**, **Post Comment**. The article **owner** can delete comments on their own articles; any comment or article can be **Reported** via the "**Report**" action (§36).

**Subscribing (any citizen).** On any newspaper page → **"Subscribe"** (free, no cap). New articles from subscribed papers then surface in the dashboard news feed and trigger a per-article notification (§35). **"Unsubscribe"** is the same toggle.

**Analytics (owner).** My Newspaper → **Analytics** shows total articles, subscriber count, total likes across articles, recent comment activity, and per-article views/likes/dislikes/comments.

**Themes and deletion (owner).** My Newspaper → **Theme** lets every citizen pick a cosmetic theme for free (a default applies otherwise). **"Delete Newspaper"** removes it for free; a **30-day cooldown** precedes re-creation (another 2 Gold), and previously published articles remain on the archive bylined **"[deleted newspaper]."**

---

## 30. Pulse — The Social Network

---

Pulse is the in-game social network. It **replaces Shouts** entirely — every former Shouts capability is folded into Pulse and expanded. Pulse merges with the citizen profile (§4.2), which doubles as each player's social profile.

### 30.1 Two surfaces

1. **The Feed** — a scrolling social timeline with tabs:
2. **For You** — global discovery, engagement-weighted (popular posts surface while staying fresh; admin-tunable).
3. **Following** — posts (and reposts) only from people you follow.
4. **Scope filters** — Country / Party / MU posts the citizen can see.
5. **Trending** — see §30.8.
6. **The Profile** — each citizen's page (Posts / Reposts / Media / Stats / Activity / Photos tabs, role badges, follow button, follower/following counts — see §4.2).

### 30.2 The post

- A post (the post unit) is **280 characters** maximum.
- **Likes** and **threaded replies** (replies inherit the parent's scope; nested replies supported; same 280-char limit).
- **Reposts** (reshare someone's post) and **quote posts** (reshare with your own comment).
- **@mentions** — clickable, link to profiles, and trigger a notification to the mentioned citizen.
- **#hashtags** — clickable, leading to a page of all posts with that tag.
- **Rich link cards** — battle-replay links and newspaper-article links embed as rich cards others can click. **No generic image uploads in posts** (real-life photos live only in the profile album — §4.6).

### 30.3 Scopes — hybrid model

Posts are **public by default** (feed discovery, follows, hashtags). A poster may optionally **restrict a post to a scope** — Country, Party, MU, or Friends — for coordination. (This preserves the old Shouts scoping while adding the public social layer.)

### 30.4 Posting rules

- **30-second cooldown** between posts.
- **Level 2+** required to post publicly (very low, to reduce bot spam while letting new players participate).
- **No XP** from posting, likes, reposts, or replies (prevents farming). Newspapers remain the writing-for-XP mechanic.

### 30.5 Editing and deletion

No editing — once posted, content is permanent. The author can delete their own posts. Moderators can delete posts via reports (§36).

## 30.6 Follow vs Friends

- **Follow** is one-directional and public — you follow someone (or an entity) without them following back; their posts/reposts appear in your Following feed.
- **Friends** (§32) is mutual and serves the Friends scope and social features.
- Both coexist. You can follow **citizens and entities** — countries, Military Units, and parties are each followable and have their own Pulse feed page (see §30.11).

## 30.7 Reposts in the feed

When someone you follow reposts a post, it appears in your Following feed (standard behavior).

## 30.8 Trending

Trending surfaces popular content **and** popular people:

- A **Trending** section/tab shows the top posts right now (most likes/reposts in a recent window, e.g., the last 24h) and highlights **famous people** (most-liked / most-followed citizens) above others.
- High-engagement citizens **and entities** get visibility, creating in-game celebrities, prestigious countries, and sought-after MUs/parties that fuel political/social dynamics. A highly-followed country, MU, or party can appear in Trending's "famous" highlights (great for recruitment and national prestige).
- The For You feed uses engagement-weighted ranking; admin-tunable.
- **Anti-cheat:** engagement from flagged alt-clusters and from very new / low-level accounts carries **zero weight** toward Trending and ranking; suspicious engagement bursts are flagged (§43 AC-6, AC-7, AC-8).

## 30.9 Paid post promotion (Gold)

A player can **promote** a post by spending Gold to highlight it:

- A promoted post appears **at the top of every person's feed** (server-wide), clearly labeled "**Promoted.**"
- **Cost** is in Gold, **admin-editable**, tiered by duration.
- The Gold **vanishes** — **removed from the game entirely** (not even to the World Bank). This is a pure Gold sink, supporting Gold scarcity.
- **No limits** on concurrent promotions.
- **Who can promote:** citizens, MUs, parties, and countries can all promote. Entities promote from their own pages, using their treasuries (per the §11.3 context-separation rule).
- **Use cases:** election campaigns, party/MU recruitment, market advertising, propaganda.
- Promoted posts remain fully subject to moderation + reporting; rule-breaking promoted content can be removed (Gold not refunded).

## 30.11 Entity Pulse pages (countries, MUs, parties)

Countries, Military Units, and parties are **followable entities** with their own Pulse social feed, folded into their existing page as a "**Feed / Pulse**" **tab** (Country page §45.5, MU page §20.15, Party page §21.11). Each entity's tab shows that entity's posts, reposts, and media, plus a **Follow button and follower count** — a social feed like a

citizen's profile, but for the entity. Following an entity puts its posts in your Following feed, and entities can appear in Trending (§30.8).

#### Who posts as the entity, and the grantable power:

| Entity        | Default poster | Grantable to                                        | Grant lifetime                                                                     |
|---------------|----------------|-----------------------------------------------------|------------------------------------------------------------------------------------|
| Country       | President      | Any citizen (president's choice)                    | <b>Auto-voids when the president's term ends</b> (also on impeachment/resignation) |
| Military Unit | Commander      | MU members (via the "Post as MU" privilege, §20.10) | <b>Permanent until the commander revokes it or the commander changes</b>           |
| Party         | Party Leader   | Party members                                       | <b>Permanent until the Party Leader revokes it or the leader changes</b>           |

Posting is done from a "Post to Pulse" action on the entity's Feed/Pulse tab; posts publish under the entity's name. This "Post as [entity]" power is separate from the president's economic delegation (§24.2) — it governs only Pulse posting. All entity posts are subject to the same moderation, reporting, scoping, and promotion rules as citizen posts.

### 30.12 Feed display & retention

A mixed feed across the scopes and follows the citizen can access, most recent first within ranking, filterable by scope. Posts older than 7 days drop off active feeds but remain on the author's profile archive.

### 30.13 Click flows — posting, engaging, following, and promoting on Pulse

Pulse is reached from **My Places** → **My Pulse**, **Country menu** → **Pulse**, each **profile** (§4.2), and the **dashboard Pulse preview**. Entities post from their own **Feed / Pulse** tab (§30.11). The mechanics, limits, and Gold-sink numbers below come from §30.2–§30.9.

**Posting (citizen).** Any Pulse surface → the **composer** ("What's happening?") → type up to **280 characters** → optionally tap the **scope selector** to restrict the post to **Country / Party / MU / Friends** (default is **public**, §30.3) → **Post**. The post appears instantly in your profile and the appropriate feeds. **Level 2+** is required to post publicly; below that the composer explains the gate. A **30-second cooldown** disables the composer briefly after each post. Posting earns **no XP** (§30.4). **@mentions** and **#hashtags** typed in the body become clickable on publish (mentions notify the named citizen; hashtags open that tag's page); **battle-replay and newspaper links** auto-render as **rich cards**. There are **no image uploads in posts** (real-life photos live only in the profile album, §4.6).

**Replying, reposting, quoting, liking.** Under any post: **Reply** (threaded, inherits the parent's scope, same 280-char limit), **Repost** (reshares as-is into your followers' Following feed), **Quote** (reshare with your own added comment), and **Like**. None of these grant XP. There is **no editing** — to fix a post you **Delete** (your own posts only via the post's "**Delete**"; moderators can delete via reports, §36) and repost.

**Following (citizen).** On any profile or entity Feed/Pulse tab → "**Follow**" (one-directional, public; no approval needed) → that account's posts and reposts now appear in your **Following** feed. "**Unfollow**" is the same button. You can follow **citizens and entities** (countries, MUs, parties).

**Reading the feed.** Pulse page tabs: **For You** (global, engagement-weighted discovery), **Following** (only accounts you follow), **scope filters** (Country / Party / MU you can see), and **Trending** (§30.8 — top posts in a recent window plus highlighted famous people and entities). Engagement from flagged alt-clusters and very new / low-level accounts carries **zero weight** here (§43).

**Promoting a post (Gold sink).** On your own post (or an entity's post, from its page) → **"Promote"** → pick a **duration tier** → the dialog shows the **Gold** cost (admin-editable) and warns the **Gold is removed from the game entirely** (not even to the World Bank). **Confirm** → the post pins to the **top of every player's feed server-wide**, labeled **"Promoted."** There is **no limit** on concurrent promotions. Promoted posts stay fully subject to moderation; a removed promotion is **not refunded**. Entities promote from their own pages using their **treasuries** (§11.3 context separation).

**Posting as an entity (recap of §30.11).** The entity's **Feed / Pulse** tab → **"Post to Pulse"** publishes under the entity's name. The **default poster** is the President (country) / Commander (MU) / Party Leader (party); the power is grantable per the §30.11 table — a country grant **auto-voids when the president's term ends**, while MU and party grants persist until revoked or the leader changes. This power is **separate** from the president's economic delegation (§24.2).

---

## 31. Private Messages

---

### 31.1 Conversation type

1-on-1 only. No group messages.

### 31.2 Character limit

2,000 characters per message.

### 31.3 Daily rate limits (universal — no Premium tier)

| Limit                 | Value |
|-----------------------|-------|
| Per recipient per day | 50    |
| Total per day         | 400   |

All admin-editable. (These were formerly the Premium tier; with Premium removed, they are now the universal limits for everyone.)

### 31.4 Blocking

If A blocked B, B cannot send messages to A — B sees an error. B's existing pre-block messages remain in A's inbox (A can delete them).

### 31.5 Retention

Messages are permanent until deleted by either party from their own view (each party owns their copy). The admin log retains all messages for moderation; citizens are notified at registration that messages may be reviewed.

### 31.6 No read receipts

The sender sees "sent" only.

### 31.7 Reporting

Either party can report. Categories: Spam / Harassment / Threats / Other. Moderators see the reported message + 5 surrounding messages for context.

### 31.8 Attachments and formatting

Plain text only with auto-linkified URLs. No image uploads, no rich formatting.

## 31.9 Click flows — sending, blocking, and reporting messages

Private messages live under **My Places** → **My Messages**; a conversation can also be opened from a profile's **"Message"** action.

**Sending (citizen).** My Messages → **"New Message"** (or a profile → **"Message"**) → pick or confirm the recipient → type up to **2,000 characters** (plain text; URLs auto-linkify; no images or rich formatting) → **Send**. Conversations are **1-on-1 only** — there is no group-message option. The sender sees **"sent"** only (no read receipts). Rate limits apply universally (no Premium tier): **50 per recipient per day** and **400 total per day**; hitting either disables **Send** with the limit shown.

**Blocking.** A profile → **"Block"** (or My Messages → conversation → **Block**) prevents that citizen from messaging you; if they try, **they** see an error. Their pre-block messages stay in your inbox and you can delete them. Each party owns their own copy of a thread; **Delete** removes it from your view only. (Messages are retained in the admin log for moderation, disclosed at registration.)

**Reporting.** Inside a conversation → **"Report"** → category **Spam / Harassment / Threats / Other** → explanation → **Submit** (§36). The reviewing moderator sees the reported message plus the **5 surrounding messages** for context.

---

## 32. Friends

---

### 32.1 Friendship type

Mutual. Both parties must agree.

### 32.2 Friend request flow

A clicks "Add Friend" on B's profile → B sees a pending request in notifications → B accepts / declines / ignores. Accepted = mutual friendship. Declined = dismissed silently. Ignored = auto-dismissed after 30 days.

### 32.3 Limits

No friend count cap. Daily cap on requests sent: 10/day.

### 32.4 Unfriending

Either party can unfriend, instant. The other party is notified.

### 32.5 Blocking

Either party can block the other. Effects: friendship removed; blocked party cannot send messages; blocked party's posts don't appear in the blocker's feed; blocked party cannot comment on the blocker's newspaper articles; blocked party is **not** notified. Block cap: 200 per citizen. Unblocking is possible at any time but does **not** restore friendship.

### 32.6 Friend benefits

Friends scope visibility (Pulse); profile shows friend count; a "Friends" tab on the profile. No combat or economic benefits.

### 32.7 Click flows — requests, unfriending, and blocking

Friendships are mutual and managed under **My Places** → **My Friends**; requests start from a profile.

**Requesting (citizen).** A profile → "Add Friend" → the request is sent (cap **10 sent per day**). The recipient sees a **pending request in the notification bell** and chooses **Accept / Decline / Ignore**: **Accept** makes the mutual friendship; **Decline** dismisses it silently; **Ignore** auto-dismisses after **30 days**. There is **no friend-count cap**.

**Unfriending.** My Friends → [a friend] → "Unfriend" (instant) → the other party is **notified**.

**Blocking.** A profile or My Friends entry → "Block" → confirm. Effects: any friendship is removed; the blocked party **cannot message** you, their **posts leave your feed**, and they **cannot comment** on your newspaper articles; the blocked party is **not notified**. Block cap **200 per citizen**. **Unblock** is available any time but does **not** restore the friendship. Friends gain **only** social benefits — the **Friends scope** on Pulse, a friend count, and a **Friends** tab on the profile — never combat or economic bonuses.

## 33. Chat System

### 33.1 What it is

A **real-time chat** system (true WebSocket, instant message delivery, **live from day one**), separate from Pulse and private messages. It supports auto-created group rooms based on affiliation, plus user-created custom groups.

### 33.2 Auto-created group rooms

| Room           | Members                                    |
|----------------|--------------------------------------------|
| Country chat   | All citizens of the country                |
| Party chat     | All party members                          |
| Congress chat  | Sitting congress members                   |
| MU chat        | MU members                                 |
| Coalition chat | Citizens of all coalition member countries |
| Global chat    | Everyone on the server                     |

### 33.3 User-created custom groups

Any citizen can create a custom chat group and invite others. **Max 50 members** per group, **max 10 groups created** per citizen, unlimited memberships. Admin-editable. The creator is the group's owner/moderator and can appoint co-moderators; **full kick is allowed** in custom groups (they are private).

### 33.4 Moderation model

**Political/military leaders have NO automatic chat moderation power** — being President, Party Leader, or Commander grants no ability to delete messages or mute people in chat. Instead:

- **Only game staff Moderators** (the staff role) appoint **chat moderators** for any auto-room (Country, Party, Congress, MU, Coalition, Global).
- Chat moderators (once appointed by staff) can **delete messages** and **mute members** (temporary).
- In **auto-rooms**, members can be muted but **not** permanently kicked (they belong by citizenship/membership).
- In **custom groups**, the creator controls moderation and can fully kick; staff can still intervene if reported.
- **Game staff** (Moderators, Server Admins, Super Admin) can always moderate any chat directly.

### 33.5 Retention & oversight

Chat messages are **kept forever**, fully accessible to the **Super Admin** — no auto-purge. (Players see recent scrollback in the UI; the full history is retained in the database.) All chat messages are **reportable and logged** for staff oversight.

### 33.6 Click flows — chat rooms, custom groups, and moderation

Chat is reached from **My Places** → **My Chats**; it is real-time (WebSocket, live from day one) and separate from Pulse and private messages.

**Using auto-rooms.** My Chats lists the citizen's **auto-created rooms** by affiliation — **Country, Party, Congress (if seated), MU, Coalition, Global** — each populated automatically by citizenship/membership. Click a room → type → **Enter** sends instantly. Players see recent scrollbar in the UI; full history is retained forever in the database (Super Admin access, §33.5). In auto-rooms members can be **muted but not kicked** (they belong by affiliation).

**Creating a custom group.** My Chats → "**New Group**" → name it and **invite** citizens → **Create**. Limits: **max 50 members** per group, **max 10 groups created** per citizen, unlimited memberships. The creator is **owner/moderator**, can **appoint co-moderators**, and — because custom groups are private — can **fully kick** members.

**Moderation model.** Political/military leaders get **no** chat powers (being President, Party Leader, or Commander grants nothing in chat). For **auto-rooms**, only **game staff Moderators** appoint **chat moderators** (Admin Panel → content tools, §49.4 / §44); an appointed chat moderator can **delete messages** and apply **temporary mutes**, but not permanent kicks. In **custom groups**, the creator controls moderation; staff can still step in if content is **reported** (every chat message is reportable and logged, §36). Game staff (Moderators, Server Admins, Super Admin) can moderate any chat directly.

---

## 34. Citizen-to-Citizen Donations

---

### 34.1 How donations work

Every citizen profile has "**Donate Money**" and "**Donate Items**" buttons.

- **Donate Money:** the sender selects a currency (Gold or any local currency held), enters an amount, confirms. Instant, no fee.
- **Donate Items:** the sender selects an item type (food/weapons/tickets/iron/grain/oil), quality (Q1–Q5 for finished goods), and quantity. Instant, no fee.

Both sides are notified.

### 34.2 Daily caps (admin-editable)

- Max **10 donations sent per day** per sender (across all recipients).
- Max **5 donations per day** to the same recipient.

### 34.3 Anti-cheat interaction

Donations are watched by anti-cheat (§43): the **starter kit is non-transferable for 7 days** (AC-1); donations **from or to accounts younger than 7 days are blocked**, and new accounts cannot receive large donations until level 5 (AC-2); the "one-way wallet" flag fires if an account only sends or only receives over 30 days; and all Gold movement is traceable in the admin Gold-flow view (AC-5).

### 34.4 Activity history

Donations are publicly logged in the sender's profile activity history.

### 34.5 Click flows — donating money and items to a citizen

Citizen-to-citizen gifts are sent from the recipient's **profile**, which carries "**Donate Money**" and "**Donate Items**" buttons. (For sending to a country treasury see §12.4 / §45.5; for MU supplies see §20.)

**Donate Money.** A profile → "**Donate Money**" → pick a **currency** (Gold or any local currency you hold) → enter an **amount** → **Confirm** → the transfer is **instant with no fee**, both parties are notified (§35), and it is written to the **sender's public activity history** (§34.4).

**Donate Items.** A profile → "**Donate Items**" → pick an **item type** (food / weapons / tickets / iron / grain / oil), the **quality** (Q1–Q5 for finished goods), and a **quantity** → **Confirm** → instant, no fee, both notified, logged.

**Eligibility and anti-cheat gates (§34.3).** The composer enforces the daily caps — **10 donations sent per day** (across all recipients) and **5 per day to the same recipient** — disabling **Confirm** with the reason when hit. Donations **from or to accounts younger than 7 days are blocked**, the **starter kit is non-transferable for 7 days** (AC-1), and a **new account cannot receive large donations until level 5** (AC-2); the relevant control is greyed out with an explanation. All Gold movement remains traceable in the admin Gold-flow view (§43 AC-5), and the **one-way-wallet** flag watches accounts that only send or only receive over 30 days.

## 35. Notifications

---

### 35.1 In-app only

Notifications are delivered exclusively via the in-app notification bell in the top navigation (always-on, cannot be disabled). **No email notifications** for in-game events — email is reserved for transactional purposes only (§50).

### 35.2 Notification triggers

**Combat & war:** you won a Battle Hero round; your country declared war; a country declared war on your country; a resistance war started in your country; your MU's daily order changed; your country's MPP signed/renewed/cancelled/about to expire (24h notice).

**Social:** friend request received / accepted; someone unfriended you; private message received; someone replied to your Pulse post; someone @mentioned you on Pulse; someone commented on your newspaper article; newspaper milestone (10/50/100 likes — daily digest); donation received; **a new follower** (Pulse).

**Politics:** election results announced; a law you proposed passed/failed; you were elected (congress/president/party leader); a law affecting your country/MU/company passed; citizenship application status changed; **you received (or lost) a delegated power** from the president.

**Economy:** job offer auto-accepted (you became an employee); you were fired; your company received a buy offer; your marketplace listing sold; your company sold (via Companies for Sale); your Monetary Market order filled.

**Administrative:** moderation action on your content; account security event; account approaching deletion (Day 25 of the 30-day pending window); **Gold purchase confirmed / Gold granted by admin.**

### 35.3 Preferences

A settings page lists all notification types; each can be toggled on/off. The bell stays visible regardless.

### 35.4 Delivery cadence

Real-time for all events **except** article/post likes. A daily digest (00:00 GMT) covers likes and milestone hits.

### 35.5 Retention

In-app notifications are retained for 30 days, then auto-deleted. Mark individual notifications as read; "Mark all as read" available.

### 35.6 Click flows — reading notifications and setting preferences

All in-game alerts arrive at the **notification bell** in the top bar (always present, cannot be disabled). There are **no email notifications** for in-game events (§50).

**Reading.** Top bar → **bell** (its badge shows the unread count) → a dropdown lists recent notifications newest-first, each linking to the relevant page (a reply opens the Pulse post, a sold-listing opens the marketplace, an election result opens the Election page, and so on). Clicking a notification marks it read; the dropdown also has "**Mark all as read.**" Notifications are retained **30 days**, then auto-purged at the daily reset (§48).

**Cadence.** Everything is **real-time except article/post likes**, which are batched into a **daily digest at 00:00 GMT** along with newspaper like-milestones. Triggers span combat/war, social, politics, economy, and administrative events — including a **new follower**, **receiving or losing a delegated power**, and **Gold purchased / granted** (§35.2).

**Preferences.** Top bar → **settings cog** → **Notifications** → a list of every notification type, each with an **on/off toggle** → changes save inline. The **bell itself stays visible** regardless of toggles; turning a type off only suppresses that type's entries.

---

## 36. Player Reports & Moderation

---

### 36.1 What can be reported

Players (account-level); newspaper articles; article comments; Pulse posts (and replies); private messages; chat messages.

### 36.2 Report categories

Spam; Harassment; Threats; Cheating; Inappropriate content; Other.

### 36.3 Submission

Select a category; write an explanation (50–500 characters required); submit. No screenshot attachments in v1.

### 36.4 Reporting limits

Max 10 reports per citizen per day. Cannot re-report the same content/player within 7 days. Counter-reports are allowed but flagged for moderator awareness.

### 36.5 Moderator workflow

Reports enter a queue sorted by priority (Threats > Harassment > Inappropriate > Cheating > Spam > Other) and age. The moderator sees: reporter, time, category, explanation, reported content, context (5 surrounding messages for PMs/chat), and the reported citizen's profile/history. Actions: Dismiss; Warn (notification + logged); Delete content; Temporary ban (1 / 7 / 30 days); Permanent ban; Escalate to Admin.

### 36.6 Ban confirmation by Admin tier

All bans (temporary **and** permanent) require Admin-tier confirmation:

1. A Moderator issues a ban.
2. The ban takes effect immediately.
3. A confirmation request is sent to the Admin tier (Super Admin or Server Admin).
4. The Admin reviews within 48 hours: Confirm / Reduce / Reverse.
5. If no review within 48h, the ban auto-confirms.

### 36.7 Reporter feedback

Notification: "Your report has been reviewed. Action taken: [Dismissed / Warning issued / Content removed / Ban applied]." No moderator name or detailed reasoning is shown.

### 36.8 Reported citizen feedback

A notification with a brief reason for warnings/deletions. For bans: detailed reason, duration, and appeal info.

## 36.9 Auto-flagging

5+ valid reports in 30 days → auto-flag for Admin-tier review (not auto-banned).

## 36.10 Appeals

30-day appeal window. "Contact Support" form on the banned-account login page. The Admin tier reviews (different from the issuing moderator). One appeal per ban. Outcomes: upheld / reduced / reversed.

## 36.11 Click flows — filing a report and the moderator queue

Reporting is available wherever a **"Report"** action appears — on a **player's profile** (account-level), a **newspaper article or comment**, a **Pulse post or reply**, a **private message**, or a **chat message**. Staff handle reports inside the **Admin Panel** moderation tools (§49.4), gated by role (§44).

**Filing a report (citizen).** Click **"Report"** on the offending item → choose a **category** (**Spam / Harassment / Threats / Cheating / Inappropriate content / Other**) → write a required **explanation (50–500 characters)** → **Submit**. Limits: **10 reports per day**, no re-reporting the same content/player within **7 days** (the form blocks it with the reason); counter-reports are allowed but flagged for moderator awareness. No screenshot attachments in v1.

**Moderator workflow (staff).** Admin Panel → **Moderation Queue** (sorted by priority **Threats > Harassment > Inappropriate > Cheating > Spam > Other**, then age) → open an entry to see the reporter, time, category, explanation, the reported content, **5 surrounding messages** of context for PMs/chat, and the reported citizen's profile/history → pick an **action**: **Dismiss**, **Warn** (notification + logged), **Delete content**, **Temporary ban (1 / 7 / 30 days)**, **Permanent ban**, or **Escalate to Admin**.

**Ban confirmation (§36.6).** A moderator's ban **takes effect immediately**, then a confirmation request goes to the **Admin tier** (Super Admin or Server Admin), who within **48 hours** chooses **Confirm / Reduce / Reverse**; with no review in 48h the ban **auto-confirms**.

**Feedback and appeals.** The reporter later gets a result notification — **"Action taken: [Dismissed / Warning issued / Content removed / Ban applied]"** — with no moderator name or reasoning. The reported citizen gets a brief reason for warnings/deletions and, for bans, the **reason, duration, and appeal info**. To appeal, the banned account uses the **"Contact Support"** form on the **banned-account login page** within the **30-day** window; a **different** Admin-tier reviewer decides **upheld / reduced / reversed** (one appeal per ban). Separately, **5+ valid reports in 30 days** auto-flag an account for Admin review (not an auto-ban).

---

## 37. Missions (Tutorial)

### 37.1 Philosophy

Missions are the tutorial. They teach every core feature exactly once. After Mission 20, there are no more missions.

### 37.2 The 20-mission sequence

Linear progression — each unlocks the next.

| #  | Mission                                        | Reward              |
|----|------------------------------------------------|---------------------|
| 1  | Complete registration & set up profile         | Starter kit (\$5.2) |
| 2  | Train for the first time                       | 1 Gold, 50 XP       |
| 3  | Accept a job offer and click Work              | 1 Gold, 50 XP       |
| 4  | Eat food to restore HP                         | 5 Q2 food           |
| 5  | Fight in any battle once                       | 1 Gold, 50 XP       |
| 6  | Buy something from the Product Market          | 2 Gold, 100 XP      |
| 7  | Use a travel ticket                            | 2 Gold, 100 XP      |
| 8  | Use Berserk attack                             | 2 Gold, 100 XP      |
| 9  | Post on Pulse                                  | 1 Gold, 50 XP       |
| 10 | Read a newspaper article and like one          | 1 Gold, 50 XP       |
| 11 | Join a military unit (level 6+)                | 3 Gold, 150 XP      |
| 12 | Fight on your MU's daily order                 | 3 Gold, 150 XP      |
| 13 | Become Battle Hero in any round                | 5 Gold, 200 XP      |
| 14 | Create or own a company (raw or manufacturing) | 5 Gold, 250 XP      |
| 15 | Trade on the Monetary Market                   | 5 Gold, 250 XP      |
| 16 | Write your own newspaper article               | 5 Gold, 250 XP      |
| 17 | Reach military rank Corporal (Rank 3)          | 10 Gold, 500 XP     |
| 18 | Join a political party (level 5+)              | 3 Gold, 150 XP      |
| 19 | Vote in an election                            | 3 Gold, 150 XP      |
| 20 | Run for congress (register as a candidate)     | 10 Gold, 500 XP     |

Total: ~64 Gold + 3,200 XP + starter kit + 5 Q2 food.

### 37.3 Time-gated missions

Mission 17 (Corporal) requires accumulated combat. Mission 18 requires level 5. Mission 19 requires the election cycle (a voting day). Mission 20 requires level 10 **and** 7-day party tenure.

### 37.4 No paid missions

No mission requires paid features. All are achievable free-to-play.

### 37.5 All numbers admin-editable.

### 37.6 Click flows — following and completing the tutorial missions

The 20-mission tutorial is tracked on the **dashboard**: while it is incomplete, a **Daily Mission / Tutorial** card shows the current mission, its objective, and its reward, with the full ladder behind a "**View All Missions**" link.

**Completing a mission.** Each mission **auto-detects** completion from the action it teaches — performing the action itself (train, work, fight, post on Pulse, vote, join an MU, etc.) advances the tracker; there is no separate "claim" step to hunt for. On completion a **popup** confirms the mission and its **reward** (Gold / XP / items per §37.2), the reward lands immediately, and the **next mission unlocks** (progression is strictly linear). The card updates to the new objective.

**Gated missions.** Some entries wait on prerequisites and the card states the gate plainly: **Mission 17** (reach **Corporal / Rank 3**) needs accumulated combat, **Mission 18** needs **level 5**, **Mission 19** needs a **voting day** in the election cycle, and **Mission 20** needs **level 10 and 7-day party tenure**. No mission requires paid features. After **Mission 20** the card disappears and no further missions are issued.

---

## 38. XP & Levels

### 38.1 XP sources

| Action                                       | XP             |
|----------------------------------------------|----------------|
| Train (first of the day)                     | +4             |
| Work (first of the day)                      | +5             |
| Fight hit                                    | +1             |
| Berserk (5 hits)                             | +25 total      |
| Eat food (first per day)                     | +1             |
| Daily login (first action)                   | +1             |
| Cast a vote                                  | +1 per race    |
| Upload avatar (one-time)                     | +5             |
| Battle Hero (per round won)                  | +50            |
| Resistance Hero                              | +500           |
| Win Country President election               | +500           |
| Win Congress seat                            | +50            |
| Win Party Leader election                    | +100           |
| Newspaper article like (capped +100/article) | +1 per like    |
| Mission completion                           | varies (§37.2) |

Posting on Pulse, likes, reposts, and replies give **no XP** (§30.4).

## 38.2 Level curve — smooth quadratic

| Level | Total XP to reach                                       | Notes                                                                           |
|-------|---------------------------------------------------------|---------------------------------------------------------------------------------|
| 1     | 0                                                       | Starting level                                                                  |
| 2     | 100                                                     | Pulse public posting unlocks (level 2)                                          |
| 3     | 300                                                     |                                                                                 |
| 4     | 600                                                     | Newspaper creation unlocks                                                      |
| 5     | 1,000                                                   | Party joining unlocks                                                           |
| 6     | 1,500                                                   | MU joining unlocks                                                              |
| 7     | 2,100                                                   | Voting unlocks (+ 30-day citizenship rule). 5 Gold per level-up starts here.    |
| 8     | 2,800                                                   |                                                                                 |
| 9     | 3,600                                                   |                                                                                 |
| 10    | 4,500                                                   | MU creation + Party creation + RW starting + Country President candidacy unlock |
| 15    | 12,200                                                  |                                                                                 |
| 20    | 29,200                                                  |                                                                                 |
| 25    | 60,000                                                  |                                                                                 |
| 30    | 120,000                                                 |                                                                                 |
| 50    | 800,000                                                 |                                                                                 |
| 75    | 3,000,000                                               |                                                                                 |
| 100   | 10,000,000                                              |                                                                                 |
| 100+  | Each level requires 10% more XP than the prior. No cap. |                                                                                 |

All thresholds admin-editable.

## 38.3 No level cap

Levels grow forever. Past 100, each level requires 10% more XP than the previous threshold.

## 38.4 Level-up rewards

- Levels 1–6: no Gold (only feature unlocks + popup).
- Levels 7+: **5 Gold per level-up.**

## 38.5 What level does

Feature unlocks (Pulse public posting at 2, newspaper at 4, party joining at 5, MU joining at 6, voting at 7, MU/Party/RW creation + presidential candidacy at 10); profile flair; leaderboards. No combat or economic bonus from level itself.

## 38.6 Click flows — where XP and level-ups appear

XP is **never** spent or claimed manually — it accrues automatically from the actions in §38.1 the moment they happen. **Where it shows:** the **top bar** carries the level number and an **XP progress bar** toward the next level (§45.1), and the profile **Stats** tab shows total XP and level.

**Earning and levelling.** Doing a qualifying action (first train/work of the day, a fight hit, a vote, winning an election, an article like, etc.) adds its XP silently; Pulse posting/likes/reposts/replies add **none** (§30.4). When the bar fills, a **level-up popup** announces the new level, lists any **feature unlocks** for that level (e.g., Pulse public posting at 2, newspaper at 4, party at 5, MU at 6, voting at 7, MU/Party/RW creation + presidential candidacy at 10), and from **level 7 up** awards **5 Gold** with a notification. There is **no level cap** (past 100 each level needs 10% more XP than the prior), and level alone confers **no combat or economic bonus** — only unlocks, flair, and leaderboard placement.

---

## 39. Login Streak

### 39.1 What counts as a "login"

Performing at least one game action during the GMT day. Actions that count: train, work, fight, eat food, post on Pulse, vote, trade, send message, donate. **Visiting the dashboard alone does NOT count** — you must do something.

### 39.2 Reset rule

Strict daily. Miss one day → the streak resets to 0.

### 39.3 Time zone handling

The day boundary is fixed at 00:00 GMT worldwide. No special handling.

### 39.4 Streak rewards (milestones, admin-editable)

| Consecutive days | Reward                                                  |
|------------------|---------------------------------------------------------|
| 3                | 1 Gold                                                  |
| 7                | 2 Gold + 50 XP                                          |
| 14               | 5 Gold + 100 XP                                         |
| 30               | 10 Gold + 250 XP + 5 Q3 food                            |
| 60               | 20 Gold + 500 XP                                        |
| 100              | 50 Gold + 1,000 XP                                      |
| 365              | 200 Gold + 5,000 XP + "Year-Long Patriot" profile badge |

After 365, the counter continues.

### 39.5 UI / warning

A streak indicator on the dashboard: "Streak: X days. Next reward in Y days." A warning notification fires at 22:00 GMT (2h before reset) if no action has been taken yet **and** the streak is  $\geq 7$  days.

### 39.6 Click flows — the login streak indicator

The streak is shown on the **dashboard** as a **streak indicator** reading "**Streak: X days. Next reward in Y days.**"

**How it ticks.** The streak advances at the daily reset (§48) for any citizen who performed **at least one game action** during the prior GMT day — **train, work, fight, eat food, post on Pulse, vote, trade, send message, or donate.**

**Visiting the dashboard alone does not count.** Miss a day and the streak **resets to 0**; the day boundary is a fixed **00:00 GMT** worldwide.

**Rewards and warning.** Crossing a milestone (3 / 7 / 14 / 30 / 60 / 100 / 365 days, admin-editable per §39.4) grants its Gold/XP/items automatically with a notification — including the "**Year-Long Patriot**" profile badge at 365, after which the counter keeps climbing. A **warning notification** fires at **22:00 GMT** (2h before reset) when no action has been taken yet that day **and** the streak is  $\geq 7$  days.

---

## 40. Medals

### 40.1 What medals are

Profile-visible recognition awards. Each medal type can be earned **infinite times** (the same medal awarded repeatedly). Each medal award gives **5 Gold**.

### 40.2 The 8 medal types

| # | Medal             | Trigger                                                           | Notes                    |
|---|-------------------|-------------------------------------------------------------------|--------------------------|
| 1 | Battle Hero       | Most damage in a single round of any battle                       | Up to 15 per battle      |
| 2 | Resistance Hero   | Initiator of a successful resistance war                          |                          |
| 3 | Hard Worker       | Work 30 times                                                     | Resets after award       |
| 4 | Bodybuilder       | Train 30 times                                                    | Resets after award       |
| 5 | True Patriot      | Deal milestone damage for your country (e.g., 100,000 cumulative) | Resets at next milestone |
| 6 | Congress Member   | Win a congress seat                                               | Per term won             |
| 7 | Country President | Win the Country President election                                | Per term won             |
| 8 | Party President   | Win the Party Leader election                                     | Per term won             |

**Removed:** Society Builder and Tournament medals do **not** exist — they were removed. There is no admin-organized tournament system. The medal count is 8.

### 40.3 Display

A citizen's profile shows the medal count for each type + recent awards in the activity history.

### 40.4 Gold reward

Each award triggers +5 Gold + a notification.

### 40.5 Click flows — earning and viewing medals

Medals are awarded **automatically** when their trigger fires — there is nothing to claim. **Where they show:** the profile displays a **count for each of the 8 medal types** (Battle Hero, Resistance Hero, Hard Worker, Bodybuilder, True Patriot, Congress Member, Country President, Party President), and each fresh award appears in the profile **activity history**.

**Earning.** Hitting a trigger (e.g., most damage in a battle round, working or training **30 times**, winning a congress seat or an election) instantly grants the medal, fires a **+5 Gold** reward with a notification, and increments the profile count. Each type can be earned **infinite times** (counting medals like Hard Worker/Bodybuilder reset after each award; True Patriot resets at the next damage milestone). The removed **Society Builder** and **Tournament** medals do not exist and there is no tournament system — the count is **8**.

---

## 41. Rankings & Leaderboards

---

### 41.1 The Rankings section

A dedicated **Rankings** area with leaderboards across all entity types. Leaderboards update in **real time**.

### 41.2 Citizen leaderboards

Strongest citizens (strength); Top damage dealers (BP); Highest level; Most medals; Top work skill level; Longest login streak; Most followers (famous people); Top Battle Heroes (Battle Hero medal count); Top Resistance Heroes.

### 41.3 Military Unit leaderboards

Top MUs by total damage (sum of members' damage); Largest MUs (member count); Top MUs in current conflicts.

### 41.4 Company leaderboards

Top producing companies (total output); Most valuable companies (quality / value).

### 41.5 Country leaderboards

Most populous (citizen count); Richest treasuries (treasury value); Most powerful (total citizen damage); Most regions held (incl. conquered).

### 41.6 Party leaderboards

Largest parties (member count); Most congress seats held.

### 41.7 Filters

Each leaderboard is filterable by **global** (whole server) and **per-country** (e.g., "strongest in India").

### 41.8 Time windows

Combat/activity boards have **all-time** / **monthly** / **weekly** toggles. Static boards (strength, level) show the current value.

### 41.9 Display

**Top 10** shown by default, expandable to **top 100**. The viewing player's own rank is always pinned ("Your rank: #3,847") even if outside the list.

## 41.10 Profile integration

Key ranks are shown on a player's profile/stats tab ("#12 strongest in India", "#340 globally") as a prestige driver.

## 41.11 Click flows — browsing leaderboards

Leaderboards live in the **Rankings** area — **Country menu** → **Rankings** (also linked from profiles, §41.10) — and update in **real time**.

**Browsing a board.** Rankings → pick a category group (**Citizens, Military Units, Companies, Countries, Parties**) → choose a specific board (e.g., **Strongest citizens, Top damage dealers, Most followers, Top MUs by total damage, Richest treasuries, Largest parties**). The board shows the **top 10** by default with an **"Expand"** control to reach the **top 100**, and the **viewing player's own rank is always pinned** (e.g., **"Your rank: #3,847"**) even when outside the visible list. Each row links to the entity.

**Filters and time windows.** A **scope filter** switches between **Global** (whole server) and **Per-country** (e.g., "strongest in India"). Combat/activity boards carry **all-time / monthly / weekly** toggles; static boards (strength, level) simply show the current value. Key ranks also surface on a player's profile **Stats** tab ("#12 strongest in India", "#340 globally") as a prestige driver.

---

## 42. Real-Money Gold Sales

---

### 42.1 The monetization model

Players buy Gold with real money. Gold is the monetization currency; it is used for everything Gold is used for (company creation/upgrades, MUs, parties, war declaration, MPPs, citizenship fees, Name Change, Pulse promotion, etc.) and can be traded for local currencies on the Monetary Market — so real money can flow into the wider economy.

### 42.2 How purchased Gold works

- **Minted on purchase.** The system creates Gold when bought; the operator is effectively the central bank of Gold. Gold sinks (war costs, company creation/upgrades, fees, Pulse promotion) remove it from circulation.
- **Purchased Gold = earned Gold.** Fully identical and fungible — no separate tracking of "paid" vs "free" Gold.
- **Pricing set by admin.** The real-money price per Gold (and any tiered packages) is configured in the admin panel and changeable at any time. The system supports tiered packages; actual prices are operator-set.
- **Pay-to-win accepted.** Buying Gold → converting to local currency → buying weapons/companies/power is an intended, accepted tradeoff — the revenue model. (The anti-pay-to-win decisions elsewhere — no Premium combat bonus, time-gated training/work — still stand; they limit certain advantages, but Gold purchasing power is deliberately allowed.)
- **No cash-out.** Real money → Gold is one-way. Players can **never** withdraw real money from the system.

### 42.3 Payment system

The payment system (gateway integration) is **deferred to implementation** but is a **required component** of the build, including regional payment methods for India / Brazil / Turkey / etc.

### 42.4 Admin Gold granting & oversight

- The **Super Admin** can grant Gold to any account directly from that player's profile (an "Add Gold" action) — for refunds, compensation, promotions, manual purchase fulfillment, or events.
- Every Gold purchase and every admin Gold grant is **logged**. **Server Admins can see** the log showing that a player purchased Gold (or was granted Gold), with amount, date, and source (real-money purchase vs Super Admin grant). This ties into the admin audit system (§44) and the Gold-flow tracer (§43 AC-5) for fraud detection.

### 42.5 Click flows — buying Gold and admin Gold grants

**Buying Gold (any player).** Top bar → click the **Gold balance** (or settings cog → **Buy Gold**) → the **packages** screen lists the admin-configured tiered packages with their real-money prices → pick a package → the **payment** step collects payment through the gateway, including regional methods for India / Brazil / Turkey / etc. (gateway integration is deferred to implementation but required, §42.3) → on success the Gold is **minted** into the account immediately and a "**Gold purchase confirmed**" notification fires (§35). Purchased Gold is **identical and**

**fungible** with earned Gold and can be traded for local currency on the Monetary Market (§11). There is **no cash-out** — real money → Gold is strictly one-way.

**Admin Gold grant (Super Admin).** A player's **profile** → "**Add Gold**" (visible only to the Super Admin) → enter an **amount** and an optional reason (refund, compensation, promotion, manual fulfillment, event) → **Confirm** → the Gold is granted instantly and the player is notified. Every purchase and every grant is **logged** with amount, date, and source (real-money purchase vs Super Admin grant); **Server Admins can view this log**, which ties into the audit system (§44) and the Gold-flow tracer (§43 AC-5).

---

## 43. Anti-Cheat

---

### 43.1 Philosophy

The anti-cheat system is **flag-based**: every detection adds to a moderation queue; **no auto-punishments fire**. Systems are also designed so that a single undetected alt account cannot break balance (time-gated progression, employee diminishing returns, salaries that cost real money, public transparency). Public logs let players police each other (crowdsourced anti-cheat).

### 43.2 Economic funneling & real-money Gold (AC-1 to AC-5)

- **AC-1 — Starter kit non-transferable for 7 days.** The 5 Gold + 50 local currency + items a new account receives cannot be donated, traded, or market-sold for the first 7 days. Kills "spawn many alts, harvest starter kits."
- **AC-2 — New-account donation lock.** Donations from **or to** accounts younger than 7 days are blocked entirely; new accounts cannot receive large donations until **level 5**. Stops fresh alts being used as Gold mules.
- **AC-3 — Market wash-trade detection.** Flags when the same two accounts repeatedly trade (one always buying the other's listings), or when items sell far above/below the market median. Goes to the mod queue.
- **AC-4 — Same-payment-method linking flag.** When multiple accounts buy real-money Gold from the same payment method / card / wallet, they are flagged as linked (a strong alt signal).
- **AC-5 — Gold-flow tracing.** Every Gold transfer between accounts is traceable in an admin "Gold flow" view, so moderators can follow the money (extends admin Gold-grant logging — §42).

### 43.3 Pulse manipulation (AC-6 to AC-9)

- **AC-6 — Alt-cluster engagement excluded from Trending.** Follows/likes from accounts in the same IP cluster / payment cluster as the target do not count toward Trending — you can't boost your own fame with your own alts.
- **AC-7 — New/low account engagement carries zero ranking weight.** Likes/follows from accounts younger than ~3 days or below level 2 carry zero weight in Trending/For You ranking (they can still like — the UI works — but it doesn't inflate rankings).
- **AC-8 — Rapid-engagement burst detection.** A statistically improbable burst of likes/follows from many accounts in a short window is flagged for mod review rather than auto-trending.
- **AC-9 — Payment-cluster coordinated-promotion flag.** Flags when one payment-method cluster is promoting coordinated political content (election-manipulation signal).

### 43.4 Political manipulation (AC-10 to AC-12)

- **AC-10 — Voting requires recent activity.** A voter must have logged in / acted at least **7 of the last 14 days** to vote. Dormant alts farmed up once and abandoned cannot vote. (This is in addition to the level 7 + 30-day-citizenship gates.)
- **AC-11 — Same-IP-cluster vote flag.** If many votes in one election come from one IP cluster, the election result is flagged for mod review (does not auto-void — mods investigate).

- **AC-12 — Party-stacking detection.** Flags when a party's membership surges with many new / low-activity / same-cluster accounts right before the top-5 cutoff (artificial top-5 inflation).

### 43.5 Combat & economic farming (AC-13 to AC-15)

- **AC-13 — Damage dominator flag.** One account dealing >40% of a country's total damage in 7 days is flagged.
- **AC-14 — Coordinated-combat flag.** Accounts in the same IP/payment cluster that repeatedly fight in the same battles on the same side are flagged.
- **AC-15 — Economy is alt-resistant by design.** Time-gated work (1/day), employee diminishing returns (\$9.8), salaries that cost real money, and raw-material supply chains mean alt labor isn't free — the owner pays salary + maintains raw materials. No additional rule needed; this is a deliberate design property.

### 43.6 Detection infrastructure & philosophy (AC-16 to AC-20)

- **AC-16 — Suspicion scoring.** Every flag (IP cluster, payment cluster, VPN, damage dominator, wash trade, rapid engagement, etc.) adds to an account's suspicion score. High scores surface in the mod queue, sorted by score. Mods investigate; nothing auto-bans.
- **AC-17 — Admin investigation tools.** An **alt-cluster graph** (accounts linked by IP, payment method, device, behavior timing); the **Gold-flow tracer**; a per-account donation/trade history viewer; a shared-IP/device viewer; and an **action replay log** (timeline of an account's actions).
- **AC-18 — Behavioral / timing detection.** Flags impossible timing (actions exactly every X seconds), 24/7 activity with no gaps, and perfectly synchronized multi-account actions (catches bots better than CAPTCHAs).
- **AC-19 — Public transparency as crowdsourced anti-cheat.** Public country treasury logs, public donations, public MU treasuries, the permanent public ban log, the public currency print log, and public action logs let players police one another. This is a deliberate anti-cheat strategy.
- **AC-20 — New-account friction.** Email verification (required at registration), progressive feature unlocking by level, and the level/citizenship gates on powerful systems all raise the cost of mass alt creation.

### 43.7 Standing flags (summary)

| Flag                     | Trigger                                                                 |
|--------------------------|-------------------------------------------------------------------------|
| Same IP cluster          | 3+ accounts active from the same IP within 24h                          |
| VPN registration         | Registering from a known VPN/proxy IP                                   |
| Same payment method      | Multiple accounts buying Gold from the same card/wallet (AC-4)          |
| Damage dominator         | One account >40% of a country's total damage in 7 days (AC-13)          |
| One-way wallet           | An account only sends or only receives over 30 days                     |
| Silent farmer            | No posts/articles/messages for 30 days but actively trading/working     |
| Wash trade               | Repeated same-pair trades or far-off-market prices (AC-3)               |
| Rapid engagement         | Improbable like/follow bursts on Pulse (AC-8)                           |
| Party stacking           | Membership surge of suspicious accounts before the top-5 cutoff (AC-12) |
| Coordinated combat       | Same-cluster accounts repeatedly fighting the same battle/side (AC-14)  |
| Frequent country-hopping | 3+ citizenship changes in 7 days                                        |

### 43.8 Auto-flagging from reports

5+ valid reports in 30 days → Admin-tier review (not auto-banned).

### 43.9 Effect of ban on game state

| State                              | Effect                                                                                                              |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Login                              | Blocked.                                                                                                            |
| Active marketplace listings        | Cancelled. Items return to frozen inventory.                                                                        |
| Active Companies for Sale listings | Cancelled. Company remains owned.                                                                                   |
| Sitting congress seat              | Vacated. Region seat filled by runner-up or sits empty.                                                             |
| Sitting presidency                 | Vacated. Country runs leaderless until next election.                                                               |
| Party Leader role                  | Auto-fallback to highest-XP party member.                                                                           |
| MU commander                       | Temp-commander rule. Reverts on unban.                                                                              |
| Pending citizenship application    | Cancelled. Gold per §25.2 rules.                                                                                    |
| Owned companies                    | Suspended. Workers can keep working into frozen inventory, but the owner cannot list goods, hire, upgrade, or sell. |
| Inventory & treasury               | Frozen. No sends/receives.                                                                                          |
| Friendships                        | Retained.                                                                                                           |
| Pulse / followers                  | Retained; account cannot post while banned.                                                                         |
| Newspaper                          | Frozen. No new articles; existing articles remain accessible to readers.                                            |

For **temporary bans**: state unfreezes when the ban expires (vacated seats don't auto-return). For **permanent bans**: state remains frozen until account deletion (§43.10).

### 43.10 Account deletion after permanent ban

90 days after a permanent ban with no successful appeal, the account becomes eligible for deletion. **Manual Super Admin action required** ("Delete Account"). On deletion: the account is deleted; all owned companies cease to exist; all inventory + raw materials deleted; all treasury currencies deleted; the newspaper is deleted (articles archived as "[deleted account]"); MU/party membership auto-leaves; friendships severed. Retained: a statistical record (admin audit) and the public ban-log entry.

### 43.11 Ban visibility

Temporary bans: private. Permanent bans: **public** — the public ban log shows username, date, reason category, and status. Successful appeals remove the entry.

## 43.12 Appeal process

30-day appeal window; Admin tier reviews (not the issuing moderator); one appeal per ban; outcomes upheld / reduced / reversed.

---

## 44. User Roles & Permissions

### 44.1 Four-tier hierarchy

| Role                | Powers                                                                                                                                                                                                                                                                                                                                                                                                                             |
|---------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Super Admin</b>  | Everything. Manage all roles (create/edit/delete Server Admins, Moderators, Support, and additional Super Admins). Create NPC citizens. Edit any game number. Unlock/lock countries. Set region resources, names, capitals; move capitals. Confirm bans. Review ban appeals. <b>Delete accounts</b> . Full admin audit access. Grant Gold from any profile. Promote/demote any player to/from Server Admin, Moderator, or Support. |
| <b>Server Admin</b> | Content moderation; confirm bans; review ban appeals/petitions; view Moderator logs; view Gold purchase/grant logs. <b>Cannot:</b> unlock/lock countries, set region data, edit game numbers, manage roles, create NPCs, or delete accounts.                                                                                                                                                                                       |
| <b>Moderator</b>    | Review reports; delete content (articles, comments, Pulse posts, chat messages, PMs); issue warnings + temporary/permanent bans (subject to Admin confirmation within 48h). <b>Cannot:</b> delete accounts, edit game numbers, unlock countries, create NPCs, or confirm bans.                                                                                                                                                     |
| <b>Support</b>      | Read-only player assistance: view accounts, transactions, history; respond to support tickets; reset passwords (with user verification). <b>Cannot</b> edit any game data, balances, or bans, or delete anything.                                                                                                                                                                                                                  |

### 44.2 Staff are promoted players

Server Admins and Moderators are **real players**, chosen over time by the Super Admin based on trust. They are **not** separate staff-only accounts — they keep playing their normal citizen account. The Super Admin has a **"Promote"** action on every player profile ("Make Server Admin" / "Make Moderator" / "Make Support" / "Remove staff role"), one click from any profile. Promotion layers the moderation tools on top of their existing citizen account; they keep their country, companies, party, MU, and everything else.

### 44.3 Oversight — highlighted logs

Staff continue playing the game normally (fight, vote, run for office, trade, post on Pulse, etc.). **Every action a staff member takes on their own player account is logged and highlighted in the Super Admin's audit view** — so the Super Admin can see at a glance what their staff are doing as players and spot conflicts of interest (e.g., a moderator banning players from a country their personal citizen is at war with). Staff moderation actions are also logged in the normal audit trail; **Server Admins can see Moderator logs**; the **Super Admin sees everything**.

### 44.4 Key boundaries

- **Account deletion = Super Admin only.** Moderators can ban (even permanently), but the actual account deletion (which wipes companies, treasury, inventory, etc. — §43.10 / §47) is reserved for the Super Admin.
- **Ban confirmation:** Moderators issue → Super Admin or Server Admin confirms within 48h (auto-confirms otherwise).

- **Ban appeal review:** handled by Super Admin or Server Admin (someone other than the issuing moderator).
- **NPC creation, game-number editing, country lock/unlock, region data = Super Admin only.**
- The owner account is the first, protected Super Admin; additional Super Admins can be created by the owner.

## 44.5 Click flows — promoting and demoting staff

Staff are **promoted players**, not separate accounts, and the controls live on the ordinary citizen **profile** — visible only to the Super Admin (§44.2).

**Promoting (Super Admin).** Any player's **profile** → "**Promote**" → choose **Make Server Admin**, **Make Moderator**, or **Make Support** → **Confirm**. The moderation tools for that tier layer on top of the player's existing account; they **keep** their country, companies, party, MU, and everything else, and **keep playing normally**.

**Demoting** uses the same menu's "**Remove staff role**."

**Where staff then act.** Their new powers appear in the **Admin Panel** (§49), role-gated: a **Moderator** gets the moderation queue and content/ban tools (§49.4); a **Server Admin** additionally confirms bans, reviews appeals, and reads Moderator and Gold logs; a **Super Admin** has everything, including country lock/unlock, game-number editing, NPC creation, **account deletion**, and Gold grants. The first owner account is the **protected Super Admin**; additional Super Admins are created the same way.

**Oversight.** Because staff still play, **every action a staff member takes on their own player account is logged and highlighted** in the Super Admin's audit view (§44.3 / §49.6), so conflicts of interest (e.g., moderating a country your citizen is at war with) are visible at a glance; Server Admins can see Moderator logs, and the Super Admin sees everything. Hard boundaries hold regardless of tier: **account deletion is Super-Admin-only**, bans need Admin confirmation within **48h**, and an appeal is reviewed by someone **other than** the issuing moderator.

---

## 45. Dashboard, Navigation & UI Pages

---

### 45.1 Top bar (every page)

Username + level + XP progress bar; citizenship flag + country; current location (region + country); HP indicator (color-coded); Gold balance; local currency balance (home country); **server time (GMT)** (e.g., "GMT 14:32"); **local time** (browser-detected); **time until next daily reset** (e.g., "Reset in 9h 28m"); **game day counter** (e.g., "Day 247"); **current election cycle day** for the player's country (e.g., "Cycle Day 7"); notification bell (unread badge); global search bar (§46); settings cog.

### 45.2 Dashboard (homepage)

Always-visible **quick actions: Train, Work, Fight** (Train → Training page; Work → Work page, which opens even when unemployed and routes to the Job Market; Fight → Battles page); the **Health card with the inline Eat control** (§7.3); a Pulse feed preview (with scope tabs); active battles involving your country or allies; the news feed (subscribed newspapers); a country action log preview (link to full log); daily mission progress (while the tutorial is incomplete); and the login streak indicator.

### 45.3 "My Places" navigation menu

My Profile; My Inventory; My Companies (owned); My Job; **Train; Work**; My Military Unit; My Party; My Newspaper (with Drafts subtab); My Friends; My Messages; My Chats; My Pulse.

### 45.4 "Country" navigation menu

Country Page (current country); Map (world); Marketplace (4 tabs: Product / Monetary / Jobs / Companies for Sale); War and Politics; Newspaper Index; **Pulse; Rankings**; Travel; Battles List; Elections.

### 45.5 Country page details

For any unlocked country: flag, name, short description; capital region (link to map); citizen count; president (link); congress members list (per party, with profile links); current tax rates (VAT, Import, Export, Work Tax, Citizenship Fee); treasury balance (all currencies + Gold, fully public); treasury inventory (all goods incl. raw materials, fully public); active diplomatic status (MPPs, coalition, Natural Enemy, active wars); the country action log (recent entries + link to full); government companies list; the 7 regions list (resource assignment, owner, current battle status); the **"Apply for Citizenship"** button (for foreign citizens); the **"Donate to Treasury"** button; the **Treasury Market & Operations** section (president/delegate only); the **Delegate Powers** panel (president only); the **War Operations** section (president only — start battles in an active war, per §17.3); the **Feed / Pulse** tab (the country's social feed — posts/reposts/media, Follow button, follower count; president posts as the country and may grant "Post as Country" per §30.11); and currency-printing log entries.

### 45.6 Inventory page

Tabs: **Items / Currencies**. Items tab: grouped by category (Raw Materials, Finished Goods); within Finished Goods, grouped by type (Food / Weapons / Tickets) then quality; raw materials shown as single tier each (Iron,

Grain, Oil); each row has quantity, a "Use" button (food/tickets), and a "Sell" shortcut. Currencies tab: all currencies with country flag and balance; a "Trade on Monetary Market" shortcut; a "View Marketplace Listings" shortcut.

## 45.7 Map page

Real-world map with 7 regions per country; country borders and colors; region boundaries; capital markers; active battle overlays (icons over battle regions; click to go to the battle page); conquered region indicators (visually distinct; original-owner label on hover); locked countries greyed out; a resource icon per region (Iron / Grain / Oil / None); zoom and pan; click a region → region page (§45.8).

## 45.8 Region page

Region name + country + resource assignment; original owner (if conquered) + current controller; companies in the region (all public — name, type, quality, owner link, employee count); citizen count currently located in the region; current battle (if any) with a link; a "Travel here" button (consumes ticket + HP — §14); recent region activity.

## 45.9 War and Politics page

Active wars (table); active MPPs; active coalitions; active Natural Enemy designations; filterable by country / recent activity.

## 45.10 Election page

During candidacy windows: "Register Candidacy" buttons for eligible races; lists of currently-registered candidates per race (with assigned regional seats for congress). During voting: the relevant race (Party Leader → only if a party member; Congress → all 7 regional seats; President → the congress-member ballot on the 24th). On results day: results revealed with winners and vote counts (per-seat for congress; congress-vote tally for president).

## 45.11 Pulse page, Rankings page, MU page, Party page

See §30 (Pulse), §41 (Rankings), §20.15 (MU page contents), §21.11 (Party page contents).

---

## 46. Search

---

### 46.1 Global search bar

Persistent in the top navigation.

### 46.2 Categories

Results from: Citizens (by username — exact and partial match); Parties (by name); Military Units (by name); Companies (by name); Newspapers (by name); Articles (by title and body keywords); Pulse hashtags. Results are grouped by category, each linking to the entity.

### 46.3 Search history

The last 10 searches per citizen are stored and shown under the search bar on focus; citizens can clear them.

### 46.4 Match logic

Citizen username search includes previously-used usernames for 30 days after a Name Change. Article search is by title + body, sorted by relevance + recency.

### 46.5 Click flows — using global search

**Searching (any citizen).** Top bar → the **global search bar** (persistent on every page) → type a query → results return **grouped by category**: **Citizens** (username, exact and partial), **Parties**, **Military Units**, **Companies**, **Newspapers** (all by name), **Articles** (by title and body keywords, sorted by relevance + recency), and **Pulse hashtags**. Each result links straight to the entity. Citizen-username matching also includes a player's **previously-used usernames for 30 days** after a Name Change (§4 / §46.4).

**History.** Focusing the empty search bar shows the citizen's **last 10 searches** beneath it; a "**Clear**" control wipes the stored history.

---

## 47. Account Deletion

---

### 47.1 Voluntary deletion flow

1. Settings → Delete Account.
2. Password re-entry required.
3. A confirmation dialog explains the consequences and the 30-day grace.
4. On confirm: the account enters "Pending Deletion" state.

### 47.2 Pending Deletion (30-day grace)

The account is frozen — no actions possible. Login works only to cancel deletion. A persistent banner reads: "Account scheduled for deletion on [date]. Click here to cancel." All companies, treasury, and marketplace listings remain frozen (same as the banned-account state — §43.9).

### 47.3 Cancellation

Cancel at any time during the 30-day window; the state returns to normal.

### 47.4 Reminders during the pending period

Reminders on Day 1, Day 7, Day 25, and Day 29.

### 47.5 Permanent deletion at Day 30

The account is permanently deleted: account, companies, inventory, raw materials, treasury, newspaper, MU/party membership, friendships, Pulse content — all deleted. Pending citizenship applications are cancelled. No retention of statistical records.

---

## 48. Daily Reset

---

At 00:00 GMT every day, in order:

1. HP refilled to 100 for every active citizen. Overflow wiped.
2. Daily food-eat counter reset (20 available again).
3. First-train-of-day XP and strength bonus reset.
4. First-work-of-day XP and work-skill credit reset.
5. Daily login streak ticked (for each citizen who acted yesterday).
6. Login streak warning notifications scheduled for the next day's 22:00 GMT.
7. MU supplies distributed to eligible members.
8. Election cycle day rollover (candidacy opens / voting opens / results, per the §22 calendar).
9. Battle round rollover (round endings).
10. Notification retention purge (>30 days deleted).
11. MPP expiry check (auto-renew or expire; 24h pre-expiry notifications).
12. World Bank daily log finalized.

All atomic within seconds.

---

## 49. Admin Panel

---

### 49.1 Overview

Full control over game systems for staff. Access is role-gated (§44).

### 49.2 Country management (Super Admin)

Lock/unlock countries; set/override region names; set/override region resource assignments (Iron / Grain / Oil / None); set/override the capital region; a visual map editor with drag-and-drop; bulk operations across regions.

## 49.3 Game number editing — admin-editable (Super Admin)

| Category          | Editable values                                                                                                                                                                  |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Daily reset       | Time of daily reset (default 00:00 GMT)                                                                                                                                          |
| HP                | Cap (100), food restore per quality, travel HP per ticket quality, fight HP (10), Berserk HP (50)                                                                                |
| Food limit        | Daily food eats (20)                                                                                                                                                             |
| Training          | Phased schedule (100/50/30/10), catch-up multiplier curve, XP from train (4)                                                                                                     |
| Work              | Work skill level thresholds (working days), level-based catch-up, XP from work (5), base production constant (4), employee diminishing-returns curve                             |
| Companies         | Quality multipliers (1×/1.5×/2.5×/3.5×/5×), upgrade costs (20/50/100/200), creation cost (20), raw material consumption tiers (1/2/3/4/5 per Q1–Q5)                              |
| Region resources  | Resource bonus multiplier (1.5×), per-region resource assignments                                                                                                                |
| Marketplace       | Market Fee (1%), listing expiry days (7), max listings (100), Companies for Sale listing rules                                                                                   |
| Currency printing | Gold cost per local currency printed (1/1,000)                                                                                                                                   |
| Taxes             | Default rates and caps for VAT, Import, Export, Work Tax, Citizenship Fee                                                                                                        |
| Combat            | Weapon quality multipliers, all modifier defaults, random variance                                                                                                               |
| Battles           | Number of rounds (15), round duration (60 min), rounds to win (8), Battle Hero rewards, battle-replay settings                                                                   |
| War               | Declaration cost (30), MPP cost (40), Coalition founding (100), joining (50)                                                                                                     |
| Resistance wars   | Cost to start (20), min level (10), reward (20 + medal)                                                                                                                          |
| Military ranks    | All 20 BP thresholds, damage bonuses                                                                                                                                             |
| MUs               | Creation cost (50), upgrade costs (100/250/500), slot expansion costs (25/50/75/100), damage bonuses                                                                             |
| Parties           | Creation cost (20), creator level (10), join level (5), Party Leader candidacy fee (2), top-N parties (5)                                                                        |
| Elections         | Calendar dates, voter level (7), citizenship duration (30), party tenure (7), president candidacy fee (10), president candidacy level (10), recent-activity requirement, rewards |
| Missions          | All 20 mission rewards                                                                                                                                                           |
| Pulse             | Post cooldown (30s), public-posting level (2), promotion costs, trending window/weights                                                                                          |
| Real-money Gold   | Gold pricing per package                                                                                                                                                         |
| Login streak      | Action types counted, milestone thresholds and rewards                                                                                                                           |
| Medals            | Trigger thresholds, Gold reward (5)                                                                                                                                              |

| Category            | Editable values                                               |
|---------------------|---------------------------------------------------------------|
| Anti-cheat          | Flag thresholds, suspicion-score weights                      |
| Voluntary deletion  | 30-day grace                                                  |
| Bootstrap           | 30-day grace, default tax rates                               |
| Re-engagement email | Inactivity threshold (14 days), frequency cap (1 per 30 days) |

## 49.4 Content moderation tools

View the moderation queue (priority + age sorted); delete articles, comments, Pulse posts, chat messages, PMs; issue warnings, temporary bans, permanent bans; review reported players; appoint chat moderators for any chat room; view the moderator action log (admin-only); review and decide appeals.

## 49.5 Player management

View player profile, transaction history, login history, IP history; reset password (Support/Admin); lock account temporarily/permanently; issue a ban; **grant Gold** (Super Admin, from the profile); promote/demote staff roles (Super Admin); delete banned accounts (Super Admin, after the 90-day post-ban window).

## 49.6 Logs and monitoring

Currency print log (also public); country action logs (also public); moderator action log (admin-only); login activity per citizen; anti-cheat flag log + suspicion scores; the **alt-cluster graph** and **Gold-flow tracer** (§43); Gold purchase/grant log; public ban log (permanent bans only — also public); account deletion log (admin-only); and the **highlighted staff-as-player action log** (Super Admin — §44.3).

## 49.7 NPC citizen management (Super Admin only)

To seed empty newly-unlocked countries:

- **Creation form:** username, email, country of citizenship; optional starting level, strength, work skill level, inventory; a fixed admin-assigned IP address; optional avatar, gender, bio.
- **Behavior:** *Automatic (scripted)* — login, daily train, daily work (if employed), eat food, login streak ticking, claim passive mission rewards. *Manual (Super Admin logs in as puppet)* — fighting, voting, running for office, propose/vote on laws, market buy/sell, post on Pulse, write articles, send messages, join/create parties/MUs/companies/newspapers, citizenship applications, donations.
- **Visibility:** invisible as admin-created to everyone except the Super Admin. Exempt from anti-cheat flagging.

## 49.8 Server-wide announcements

Admin-posted announcements appear as: a top banner on every page (duration-limited); in the notification bell (if the Server Announcement toggle is on); and in a dedicated Announcements section on the dashboard. Supports title, body (rich text), start/end timestamps, and priority (info / warning / critical).

## 49.9 Click flows — common Admin Panel operations

The **Admin Panel** is reached by staff via the settings cog (or a dedicated admin route) and is **role-gated** (§44); below are the most common operator paths. Numbers edited here are the same admin-editable values referenced throughout the document.

**Unlock a country (Super Admin).** Admin Panel → **Country Management** → the **map editor** → select a locked country → "**Unlock**" → optionally set its **7 region names**, **resource assignments (Iron / Grain / Oil / None)**, and **capital region** via drag-and-drop, with bulk operations across regions → **Save**. The country becomes playable (and gets its 30-day bootstrap grace).

**Edit a game number (Super Admin).** Admin Panel → **Game Numbers** → pick the category (Training, Work, Companies, Taxes, Combat, Battles, War, Elections, Pulse, Real-money Gold, etc., per the §49.3 table) → change the value → **Save**. The new value applies going forward.

**Create an NPC (Super Admin).** Admin Panel → **NPC Management** → "**Create NPC**" → fill the form (username, email, country; optional starting level/strength/work-skill/inventory, a fixed admin IP, optional avatar/gender/bio) → **Create**. The NPC runs **automatically** (login, daily train/work, eat, streak, passive mission rewards) and can be driven **manually** by the Super Admin logging in as the puppet for anything else; NPCs are invisible-as-admin to everyone but the Super Admin and are exempt from anti-cheat.

**Post a server-wide announcement (staff).** Admin Panel → **Announcements** → "**New Announcement**" → enter title, rich-text body, start/end timestamps, and priority (**info / warning / critical**) → **Publish** → it shows as a duration-limited top banner on every page, in the bell (if the Server Announcement toggle is on), and in the dashboard Announcements section.

**Moderation and logs.** Content moderation tools (queue, deletions, bans, appoint chat moderators, appeals) sit under **Content Moderation** (§49.4); **Player Management** holds profile/transaction/login/IP history, password resets, account locks, **Grant Gold**, staff promote/demote, and **delete banned accounts** (Super Admin, after the post-ban window); **Logs & Monitoring** exposes the currency-print log, country action logs, moderator action log, login activity, the **anti-cheat flag log + suspicion scores**, the **alt-cluster graph** and **Gold-flow tracer**, the Gold purchase/grant log, the public ban log, the account-deletion log, and the **highlighted staff-as-player action log**.

---

## 50. Email Policy

---

### 50.1 Transactional emails (enabled)

Email verification at registration; password reset; account security alerts (new device login, password changed, email changed); re-engagement (no login for 14 days, max 1 email per 30 days).

### 50.2 In-game notification emails (disabled)

No emails for Battle Hero wins, friend requests, messages, election results, war declarations, article/post likes, listing sales, donations, etc. All in-game notifications stay in the bell (§35).

### 50.3 Unsubscribe and preferences

All transactional emails except password reset and security alerts include unsubscribe links. Re-engagement emails can be unsubscribed. Email preferences are manageable in account settings.

### 50.4 Click flows — managing email preferences

Email is **transactional only** — verification, password reset, security alerts, and a capped re-engagement email (no login for **14 days, max 1 per 30 days**). No in-game event ever emails you; those stay in the bell (§35 / §50.2).

**Managing preferences.** Top bar → **settings cog** → **Email Preferences** → toggle the optional transactional categories and **unsubscribe** from re-engagement; **password-reset and security-alert emails cannot be turned off**. Most transactional emails also carry an **unsubscribe link** in the footer that lands on this same preferences page.

---

## 51. Deferred Features

Out of scope for v1; may be revisited.

| #     | Deferred feature                     | Note                                                                                                                      |
|-------|--------------------------------------|---------------------------------------------------------------------------------------------------------------------------|
| 51.1  | World Bank Loan System               | Countries borrowing Gold from World Bank reserves. Not in v1.                                                             |
| 51.2  | Larger achievement system            | Hundreds of achievements. v1 has 8 medals (§40) only.                                                                     |
| 51.3  | Multi-server support                 | Multiple parallel worlds / cross-server features. Not in v1.                                                              |
| 51.4  | Speed servers                        | Variants faster than 1 game day = 1 real day. Not in v1.                                                                  |
| 51.5  | Equipment system                     | Wearable items with stats. Not in v1. Weapons are simple consumables.                                                     |
| 51.6  | Auctions                             | Timed bidding for items/companies. Companies for Sale uses fixed-price listings.                                          |
| 51.7  | Contracts and loans between citizens | Formal loan contracts with repayment tracking. Donations are unilateral only.                                             |
| 51.8  | Civil wars                           | Internal rebellion. Not in v1.                                                                                            |
| 51.9  | Equipment merging / splitting        | Combining items into higher quality. Not in v1.                                                                           |
| 51.10 | Estates and houses                   | Real estate. Not in v1.                                                                                                   |
| 51.11 | Gifts as a separate item             | A distinct HP-restoring "gift" item separate from food. Not in v1.                                                        |
| 51.12 | Group private messages               | 3+ participants in a PM conversation. (Chat covers group communication — §33.) Not in v1.                                 |
| 51.13 | Region treasuries                    | Region-level economy. Not in v1.                                                                                          |
| 51.14 | Minimum wage                         | Country-level wage enforcement. Not in v1.                                                                                |
| 51.15 | Real-money item purchases            | Only <b>Gold</b> is sold for real money (§42); no other items are purchasable with real money. Cash-out is not supported. |
| 51.16 | Advertising                          | External ad insertions / sponsored content. (In-game Pulse promotion via Gold exists — §30.9.) Not in v1.                 |
| 51.17 | Scheduled article publishing         | Schedule articles to publish later. Drafts only. Not in v1.                                                               |
| 51.18 | Owner approval for job applications  | Job offers are auto-accepted by any qualifying citizen. Not in v1.                                                        |
| 51.19 | More raw material types              | Currently 3 (Iron, Grain, Oil). Additional types not in v1.                                                               |
| 51.20 | Quality tiers for raw materials      | Raw materials are single-tier. Q1–Q5 raw materials not in v1.                                                             |

**End of blueprint.**
